Contents

1 Introduction 1
- 1.1 Motivation . . . 1
- 1.2 Objective . . . 4
- 1.3 Outline of the document . . . 5

2 Fundamentals 7
- 2.1 Production Systems . . . 7
  - 2.1.1 Automation Systems . . . 8
  - 2.1.2 Networked Control System . . . 9
- 2.2 NCS Communication Requirements . . . 11
  - 2.2.1 Timeliness in NCS . . . 12
    - Data Collection and Data Distribution . . . 13
    - NCS System Reaction Time . . . 15
    - Deterministic Communication . . . 16
  - 2.2.2 Communication Reliability in NCS . . . 19
  - 2.2.3 Industrial Communication Requirements - Summary . . . 21
- 2.3 Industrial Network Systems . . . 21
  - 2.3.1 Industrial Ethernet based Protocols - Real-Time . . . 23
    - Class 3 – Polling . . . 23
    - Class 3 – Token Passing . . . 24
    - Class 3 – TDMA Based . . . 24
  - 2.3.2 Industrial Ethernet based Protocols - Reliability . . . 25
    - Physical Layer . . . 25
    - Data Link Layer . . . 27
    - Application Layer . . . 27
- 2.4 Engineering of Industrial Network Systems . . . 28
- 2.5 Re-engineering of Industrial Network Systems . . . 30
- 2.6 Problem Definition . . . 32
- 2.7 Solution Approach . . . 34

3 Timeliness in Ethernet Based Network Control Systems 37
- 3.1 Network Topology . . . 37
- 3.2 Ethernet Standard . . . 39
- 3.3 Ethernet Standard Real-Time Capabilities . . . 42

3.4 Ethernet Based Time-Triggered Protocols 43
3.4.1 IEEE 802.1 TSN 44
Advanced Queueing, Forwarding and Resource Reservation Methods in IEEE 802.1 TSN 45
Time Triggered Communication Scheduling in IEEE 802.1 TSN . . . 48
Common Notion of Time in IEEE 802.1AS - TSN 49
Summary of TSN Real-Time Capabilities 51
3.4.2 Time Triggered Ethernet (TTEthernet) 51
Advanced Queueing, Forwarding and Resource Reservation Methods in TTEthernet 51
Time Triggered Communication Scheduling in TTEthernet 52
Common Notion of Time in TTEthernet 52
Summary of TTEthernet Real-Time Capabilities 53
3.4.3 PROFINET IRT 53
Advanced Queueing, Forwarding and Resource Reservation Methods in PROFINET IRT 54
Time Triggered Communication Scheduling in PROFINET IRT . . . 56
Common Notion of Time in PROFINET IRT 57
Summary of PROFINET IRT Real-Time Capabilities 59
3.4.4 EtherCAT 59
Advanced Queueing, Forwarding and Resource Reservation Methods in EtherCAT 59
Time Triggered Communication Scheduling in EtherCAT 61
Common Notion of Time in EtherCAT 61
Summary of EtherCAT Real-Time Capabilities 62
3.4.5 Summary of Ethernet Based Time Triggered Protocols 62
3.5 Communication Scheduling in TTEB Systems 63
3.6 Complexity of the Scheduling Problem in TTEB-Systems 65
3.7 Scheduling Problem Formalisation and Modelling 66
3.7.1 Release Time (r_i) 68
3.7.2 Start Time (s_i) 68
3.7.3 Processing Time (p_i) 70
3.7.4 End-to-End Time (e_i) 71
3.7.5 Task Deadline (d_i) 71
3.7.6 Completion Time C_i 72
3.7.7 Scheduling Constraints 72
No Preemption Constraint 74
Precedence Relation 74
3.8 Scheduling Using Mixed Integer Linear Programming (MILP) 75
3.8.1 The Disjunctive TTEB Scheduling Model 75
3.8.2 MILP Scheduling Results 77
Results for Line, Comb and Tree Topology 77
Results for Ring Topology 77
3.9 Proposed Scheduling Approach 79
3.9.1 Slip-Stream Effect - Working Principle 80

3.9.2 Theoretical Analysis of the Slip-Stream Scheduling - Line Topology 80
Downlink Scheduling . . . 81
Uplink Scheduling . . . 82
3.9.3 Slip-Stream in Tree Topology . . . 83
3.9.4 Theoretical Analysis of the extended slip-stream effect - Tree Graphs 86
Downlink Scheduling . . . 86
Uplink Scheduling . . . 88
3.9.5 Slip-stream in Ring topology . . . 89
Adaptation of the Slip-Stream Effect for Redundant Topologies . . . 90
Slip-Stream Effect - Solving Disjunctions . . . 91
Linear Program - Calculating FSOs . . . 94
3.9.6 Theoretical Analysis of the proposed approach - Graphs with Cycles (Rings) . . . 95
3.9.7 Slip-stream in Topology, Where Multiple PLC Ports are Involved . . . 97
3.10 Clock Synchronisation Accuracy and Scheduling . . . 97
3.10.1 Accuracy Determination Methods . . . 98
Accuracy through Measurements . . . 98
Accuracy through Network Modelling and Simulation . . . 99
Accuracy through Analytical Calculation and Approximation . . . 99
Accuracy through Tests, Certification and Classification . . . 99
Accuracy through Online Worst Case Distributed Calculation . . . 100
Accuracy through System Integrated Measurement Capabilities . . . 100
3.10.2 Benchmark of the Synchronisation Accuracy Determination Methods . . . 100
3.10.3 Considering Synchronisation Accuracy in the Schedule . . . 102
3.11 Concluding Remarks . . . 102

4 Communication Reliability 105
4.1 Redundancy methods . . . 105
4.2 Dynamic Redundancy Methods . . . 106
4.2.1 An Approach to Improve Dynamic Redundancy Protocols . . . 108
Decreasing the Link-Loss Propagation Delay . . . 108
Decreasing the Link-Loss Detection Time . . . 109
Decreasing the Port State Change Delay . . . 110
4.2.2 Theoretical Analysis of the Failure Detection Time . . . 110
4.2.3 Dynamic Redundancy and Scheduling . . . 111
4.3 Static Redundancy Methods . . . 112
4.3.1 Path Search Aspects . . . 113
4.3.2 2-Disjoint Paths . . . 115
4.3.3 Possibly Disjoint Path Search Method . . . 117
4.3.4 Theoretical Analysis of the Possibly Disjoint Path Search Approach 122
4.3.5 Static Redundancy and Scheduling . . . 123
4.4 Concluding Remarks . . . 123

5 Seamless Reconfiguration of the Industrial Network System 125
5.1 Reconfiguration of the TTEB Industrial Network System . . . 125
5.2 Identification of a INS Change - Scheduler Input . . . 127
5.2.1 Topology Discovery . . . 127
5.2.2 Device Characteristics Discovery . . . 130
5.2.3 Traffic Characteristics Discovery . . . 132
5.2.4 Discovery Mechanisms Summary . . . 134
5.3 Application of a New Schedule . . . 135
5.3.1 Distribution of a New Schedule . . . 135
5.3.2 Synchronisation of a Schedule . . . 136
5.3.3 Synchronous Activation of a Schedule . . . 139
Static Real-Time Channel Reservation . . . 139
Real-Time Payload Piggy-backing . . . 140
Synchronisation Frame Piggy-backing . . . 140
Summary . . . 141
5.3.4 Appliance of a New Schedule - Summary . . . 142
5.4 Proposed Seamless Reconfiguration Approach . . . 142
5.5 Concluding Remarks . . . 145

6 Proposed Approach Evaluation 149
6.1 Scheduling Approach . . . 149
6.1.1 Scheduling Approach Implementation . . . 150
XML Input Parser and Output Generator . . . 150
Path Search Module . . . 151
Visualisation Module . . . 151
6.1.2 Scheduling Approach - Definition of Use-cases and Evaluation . . . 151
Use-case - Line Topology . . . 152
Use Case - Comb Topology . . . 152
Use Case - Tree Topology . . . 153
Use Case - Ring Topology . . . 154
6.1.3 Scheduling Approach Evaluation - Summary . . . 155
6.2 Communication Reliability Methods . . . 156
6.2.1 Dynamic Redundancy Methods . . . 157
Summary . . . 159
6.2.2 Static Redundancy Methods . . . 159
Disjoint Path Search - definition of Use Cases . . . 160
Disjoint Path Method - Results . . . 161
Disjoint Path Search - Summary . . . 161
6.2.3 Communication Reliability Methods - Summary . . . 162
6.3 Seamless Reconfiguration Approach . . . 162
6.3.1 Distribution of a New Schedule . . . 163
Simulation Model . . . 164
Scenario . . . 164
Results . . . 165
Summary . . . 166

6.3.2 Synchronisation and Activation of a New Schedule 166
Measurement Setup - Schedule Switching Time 166
Results 167
Measurement Setup - Schedule Switching vs. Running RT Communication 168
Results 169
6.3.3 Seamless Reconfiguration Approach - Summary 169
6.4 Concluding Remarks 169

7 Conclusions and Outlook 171
7.1 Conclusions 171
7.2 Outlook 173
