1	First Principles	1
1.1	Preliminaries	2
1.1.1	Rings and Modules	3
1.1.2	Fields	4
1.1.3	Localizations	4
1.1.4	Degree Functions	4
1.1.5	Graded Rings and Homogeneous Derivations	5
1.1.6	Associated Graded Rings	8
1.1.7	Locally Finite and Locally Nilpotent Derivations	11
1.1.8	Degree Function Induced by a Derivation	11
1.1.9	Exponential and Dixmier Maps	12
1.1.10	Derivative of a Polynomial	12
1.2	Basic Facts About Derivations	13
1.2.1	Algebraic Operations	13
1.2.2	Subalgebra $\text{Nil}(D)$	14
1.2.3	Kernels	15
1.2.4	Localization	16
1.2.5	Integral Ideals	17
1.2.6	Extension of Scalars	17
1.2.7	Integral Extensions and Conductor Ideals	17
1.3	Varieties and Group Actions	18
1.4	First Principles for Locally Nilpotent Derivations	21
1.5	\mathbb{G}_a -Actions	31
1.5.1	Correspondence with LNDs	32
1.5.2	Orbits, Vector Fields and Fixed Points	33
1.6	Degree Resolution and Canonical Factorization	35
1.6.1	Degree Modules	36
1.6.2	Degree Resolutions	37
1.6.3	Equivariant Affine Modifications	38
1.6.4	Canonical Factorizations	39

2	Further Properties of LNDs	41
2.1	Irreducible Derivations	41
2.2	Minimal Local Slices	43
2.3	Four Lemmas About UFDs	45
2.4	Degree of a Derivation	47
2.5	Makar-Limanov Invariant	50
2.6	Quasi-Extensions and \mathbb{Z}_n -Gradings	55
2.7	G -Critical Elements	57
2.8	AB and ABC Theorems	60
2.9	Cables and Cable Algebras	63
2.9.1	Associated Rooted Tree	64
2.9.2	D -Cables	64
2.9.3	Cable Algebras	66
2.10	Exponential Automorphisms	66
2.11	Transvectants and Wronskians	67
2.11.1	Transvectants	67
2.11.2	Wronskians	68
2.12	Recognizing Polynomial Rings	71
3	Polynomial Rings	73
3.1	Variables, Automorphisms, and Gradings	73
3.1.1	Linear Maps and Derivations	74
3.1.2	Triangular and Tame Automorphisms	74
3.2	Derivations of Polynomial Rings	75
3.2.1	Definitions	75
3.2.2	Partial Derivatives	77
3.2.3	Jacobian Derivations	80
3.2.4	Homogenizing a Derivation	86
3.2.5	Other Base Rings	87
3.3	Locally Nilpotent Derivations of Polynomial Rings	87
3.4	Slices in Polynomial Rings	90
3.5	Triangular Derivations and Automorphisms	92
3.6	Group Actions on \mathbb{A}^n	95
3.6.1	Terminology	95
3.6.2	Translations	96
3.6.3	Planar Actions	97
3.6.4	Theorem of Deveney and Finston	97
3.6.5	Proper and Locally Trivial \mathbb{G}_a -Actions	98
3.7	\mathbb{G}_a -Actions Relative to Other Group Actions	99
3.8	Some Important Early Examples	102
3.8.1	Bass's Example ([12], 1984)	102
3.8.2	Popov's Examples ([344], 1987)	102
3.8.3	Smith's Example ([386], 1989)	103
3.8.4	Winkelmann's Example 1 ([421], 1990)	104

3.8.5	Winkelmann's Example 2 ([421], 1990)	105
3.8.6	Example of Deveney and Finston ([104], 1995)	106
3.9	Homogeneous Dependence Problem.....	106
3.9.1	Construction of Examples	108
3.9.2	Derksen's Example.....	109
3.9.3	De Bondt's Examples	110
3.9.4	Rank-4 Example in Dimension 5	112
4	Dimension Two	113
4.1	Background	113
4.2	Newton Polygons	115
4.3	Polynomial Ring in Two Variables Over a Field	117
4.3.1	Rentschler's Theorem: First Proof.....	117
4.3.2	Rentschler's Theorem: Second Proof	117
4.3.3	Proof of Jung's Theorem.....	119
4.3.4	Proof of Structure Theorem.....	119
4.3.5	Remark About Fields of Positive Characteristic	121
4.4	Locally Nilpotent R -Derivations of $R[x, y]$	122
4.4.1	Kernels in $R[x, y]$	122
4.4.2	Case $(DB) = B$	124
4.4.3	Two Theorems of Bhatwadekar and Dutta	126
4.4.4	Stable Tameness	127
4.5	Rank-Two Derivations of Polynomial Rings	128
4.5.1	Variable Criterion	128
4.5.2	Applications to Line Embeddings	129
4.6	Newton Polygon of a Derivation	131
4.7	Automorphisms Preserving Lattice Points.....	132
	Appendix: Newton Polytopes	133
5	Dimension Three	137
5.1	Miyanishi's Theorem	138
5.1.1	Kambayashi's Theorem	139
5.1.2	Properties of the Quotient Morphism	139
5.1.3	Description of Miyanishi's Proof.....	140
5.1.4	Positive Homogeneous Case.....	142
5.1.5	Type of a Standard Homogeneous Derivation	145
5.2	Other Fundamental Theorems	146
5.3	Triangularizability and Tameness	149
5.3.1	Triangularizability.....	149
5.3.2	Tameness	150
5.4	Homogeneous $(2, 5)$ Derivation.....	151
5.5	Local Slice Constructions	153
5.5.1	Definition and Main Facts	153
5.5.2	Examples of Fibonacci Type.....	155
5.5.3	Type $(2, 4m + 1)$	156
5.5.4	Triangular Derivations	156
5.5.5	Rank Two Derivations	157

5.6	Positive Homogeneous LNDs	157
5.7	Generalized Local Slice Constructions	162
5.8	\mathbb{G}_a^2 -Actions	163
	Appendix: An Intersection Condition	164
6	Linear Actions of Unipotent Groups	167
6.1	The Finiteness Theorem	168
6.2	Mauer-Weitzenböck Theorem	169
6.2.1	Background	169
6.2.2	\mathbb{G}_a -Modules and Jordan Normal Form	170
6.2.3	Proof of the Maurer-Weitzenböck Theorem	172
6.3	Generators and Relations	175
6.3.1	Brief History	175
6.3.2	Quadratic and Cubic Invariants	176
6.3.3	Rings A_n for Small n	177
6.3.4	Some Reducible \mathbb{G}_a -Modules	178
6.4	Linear Counterexamples to the Fourteenth Problem	179
6.4.1	Examples of Nagata	179
6.4.2	Examples of Steinberg and Mukai	181
6.4.3	Examples of A'Campo-Neuen and Tanimoto	183
6.4.4	Linear Counterexample in Dimension Eleven	184
6.5	Linear \mathbb{G}_a^2 -Actions	185
6.5.1	Actions of Nagata Type	185
6.5.2	Actions of Basic Type	186
	Appendix 1: Finite Group Actions	188
	Appendix 2: Generators for A_5 and A_6	189
7	Non-Finitely Generated Kernels	193
7.1	Roberts' Examples	194
7.2	Kuroda's Examples	196
7.3	Non-finiteness Criterion	197
7.4	Down Operator	198
7.4.1	Properties	199
7.4.2	Operator Relations	200
7.4.3	Restriction to B_n	202
7.5	Quotients of a \mathbb{G}_a -Module	203
7.6	Family of Examples in Dimension Five	206
7.6.1	Derivations $D_{(r,s)}$	206
7.6.2	Proof of Theorem 7.14	206
7.6.3	Kernel of $D_{(3,2)}$	208
7.7	Proof for A'Campo-Neuen's Example	209
7.8	Proof for Linear Example in Dimension Eleven	211
7.9	Locally Trivial Examples	212
7.10	Some Positive Results	212
7.11	Winkelmann's Theorem	214
	Appendix: Nagata's Problem Two	214

8	Algorithms	217
8.1	van den Essen's Kernel Algorithm	219
8.1.1	Description of the Algorithm	220
8.1.2	Kernel Check Algorithm	221
8.1.3	Generalized van den Essen Kernel Algorithm	222
8.2	Image Membership Algorithm	222
8.3	Criteria for a Derivation to be Locally Nilpotent	223
8.4	Maubach's Algorithm	225
8.4.1	Homogeneous Algorithm	225
8.4.2	Application to Non-homogeneous Derivations	226
8.5	Extendibility Algorithm	227
8.6	Algorithm to Compute Degree Modules	228
8.7	Examples	229
8.7.1	Basic Linear Derivations	229
8.7.2	Examples in Dimension Four	231
8.7.3	Vector Group Action	234
8.8	Canonical Factorization for $(2, 5)$ Action	235
8.8.1	Homogeneous $(2, 5)$ Derivation	235
8.8.2	Degree Modules \mathcal{F}_n	235
8.8.3	Degree Resolution	239
8.8.4	Fixed Points	239
8.8.5	Affine Modifications	239
8.8.6	Canonical Factorization	240
8.9	Winkelmann's Example	241
8.9.1	The Plinth Ideal	241
8.9.2	The Mapping π_0	242
8.9.3	The Mapping π_1	243
8.9.4	Summary	243
9	Makar-Limanov and Derksen Invariants	245
9.1	Danielewski Surfaces	246
9.2	Pham-Brieskorn Surfaces	250
9.3	Koras-Russell Threefolds	251
9.4	Characterizing $k[x, y]$ by LNDs	254
9.5	Characterizing Danielewski Surfaces by LNDs	256
9.5.1	Three Characterizations	257
9.5.2	Application to Embedding Questions	257
9.6	LNDs of Special Danielewski Surfaces	259
9.6.1	Transitivity Theorem	259
9.6.2	Example Over the Reals	259
9.7	Examples of Crachiola and Maubach	262
9.8	Further Results in Classification of Surfaces	262

10	Slices, Embeddings and Cancellation	265
10.1	Zariski Cancellation Problem	268
10.1.1	Danielewski's Example	268
10.1.2	Abhyankar-Eakin-Heinzer Theorem	269
10.1.3	Crachiola's Theorem	270
10.1.4	Hamann's Theorem	271
10.1.5	Hochster's Example	272
10.2	Asanuma's Torus Actions	274
10.2.1	Derivation Associated to an Embedding	275
10.2.2	Two-Dimensional Torus Action	277
10.2.3	One-Dimensional Torus Action	278
10.3	Examples of Bhatwadekar-Dutta and Vénéreau	279
10.3.1	Family of Affine Fibrations of \mathbb{A}^4	279
10.3.2	Stable Coordinates in $k^{[4]}$	280
10.4	R -Derivations of $R[X, Y, Z]$ with a Slice	282
	Appendix: Torus Action Formula	283
11	Epilogue	287
11.1	Kernels for Polynomial Rings	287
11.2	Freeness Conjecture	288
11.3	Local Slice Constructions in Dimension Three	289
11.4	Tame \mathbb{G}_a -Actions in Dimension Three	289
11.5	Fundamental Problem for Cable Algebras	289
11.6	Nilpotency Criterion	290
11.7	Calculating the Makar-Limanov Invariant	290
11.8	Maximal Subalgebras	290
11.9	Invariants of a Sum	291
11.10	Finiteness Problem for Extensions	291
11.11	Geometric Viewpoint	292
11.12	Russell Cubic Threefold	293
11.13	Extending \mathbb{G}_a -Actions	293
11.14	Variable Criterion	293
11.15	Free \mathbb{G}_a -Actions on Affine Spaces	294
11.16	Wood's Question	296
11.17	Popov's Questions	296
11.18	Bass's Question	297
11.19	Two Commuting Nilpotent Matrices	297
11.20	\mathbb{G}_a -Actions in Positive Characteristic	297
11.21	Kronecker's Paradox	298
	References	299
