

# Preface

This volume contains the papers presented at the 24th Workshop on Logic, Language, Information and Computation (WoLLIC 2017) held during July 18–21, 2017, at the Department of Computer Science, University College London, London, UK. The WoLLIC series of workshops started in 1994 with the aim of fostering interdisciplinary research in pure and applied logic. The idea is to have a forum which is large enough in the number of possible interactions between logic and the sciences related to information and computation, and yet is small enough to allow for concrete and useful interaction among participants.

There were 61 submissions. Each submission was reviewed by at least three Program Committee members. The committee decided to accept 28 papers. The program included eight invited lectures by Hazel Brickhill (Bristol) (University of Bristol), Michael Detlefsen (University of Notre Dame), Alexander Kurz (University of Leicester), Frederike Moltmann (New York University), David Pym (University College London), Nicole Schweikardt (Humboldt Universität), Fan Yang (Delft University), and Boris Zilber (University of Oxford). There were also four tutorials given by Michael Detlefsen, Alexander Kurz, Frederike Moltmann, and Nicole Schweikardt.

As a tribute to a recent project focusing on the cross-cultural connections that are made through mathematics and the impact that Navajo Math Circles can have on a community, there was also a screening of Csicsery’s Navajo Math Circles (2016), a one-hour film, documenting the process of a two-year period in which hundreds of Navajo children in recent years have found themselves at the center of a lively collaboration with mathematicians from around the world.

We would very much like to thank all Program Committee members and external reviewers for the work they put into reviewing the submissions. The help provided by the EasyChair system created by Andrei Voronkov is gratefully acknowledged. Finally, we would like to acknowledge the generous financial support by the University College London’s Department of Computer Science, and the scientific sponsorship of the following organizations: Interest Group in Pure and Applied Logics (IGPL), The Association for Logic, Language and Information (FoLLI), Association for Symbolic Logic (ASL), European Association for Theoretical Computer Science (EATCS), European Association for Computer Science Logic (EACSL), Sociedade Brasileira de Computação (SBC) and Sociedade Brasileira de Lógica (SBL).
