

Preface

This volume contains five fully revised selected regular papers, covering a wide range of very hot topics in the field of data and knowledge management systems. These include distributed massive data streams, storage systems in fog environments, scientific workflow scheduling in multi-site clouds, cost optimization of data flows based on task-re-ordering, and fusion strategies for large-scale multi-modal image retrieval. We would like to sincerely thank the editorial board and the external reviewers for thoroughly refereeing the submitted papers and ensuring the high quality of this volume.

Special thanks go to Gabriela Wagner for her high availability and her valuable work in the realization of this TLDKS volume.
