

Preface

This volume contains five fully revised selected regular papers, covering a wide range of very hot topics in the field of data quality, social-data artifacts, data privacy, predictive models, and e-health. These include data-quality methodology for the public sector, analysis of the interaction between business and social-data artifacts, protocols for secure querying in the cloud while preserving the privacy of the participants, and algorithms for the prediction of norovirus concentration in drinking water.

We would like to sincerely thank the editorial board and the external reviewers for thoroughly refereeing the submitted papers and ensuring the high quality of this volume.

Special thanks go to Gabriela Wagner for her high availability and her valuable work in the realization of this TLDKS volume.
