<b>1</b>	<b>Introduction of Rotordynamics</b>	<b>1</b>
1.1	Vibration Problems in Rotating Machinery	1
1.1.1	Varieties of Rotating Machinery	1
1.1.2	Bearings	4
1.1.3	Defects in Various Elements and Induced Vibration	6
1.1.4	Rotordynamics	6
1.2	Types of Vibration in Rotating Machinery	8
1.3	Classification of Vibration by Mechanism of Occurrence	9
1.4	Simplifying Complicated Phenomena	11
<b>2</b>	<b>Basics for a Single-Degree-of-Freedom Rotor</b>	<b>13</b>
2.1	Free Vibrations	13
2.1.1	Natural Frequency	13
2.1.2	Calculation of Spring Constant	14
2.1.3	Conservation of Energy	15
2.1.4	Mass Effects of Spring on Natural Frequency	15
2.2	Damped Free Vibration	18
2.2.1	Mass-Spring-Viscous Damped System	18
2.2.2	Measurement of Damping Ratio	20
2.2.3	Phase Lead/Lag Corresponding to Damping Ratio	24
2.3	Unbalance Vibration of a Rotating Shaft	25
2.3.1	Complex Displacement and Equation of Motion	25
2.3.2	Complex Amplitude of Unbalance Vibration	26
2.3.3	Resonance Curves	27
2.3.4	Nyquist Plot	28
2.3.5	Bearing Reaction Force at Resonance	30
2.3.6	Transmissibility of Unbalance Vibration to Foundation	32

2.4	Evaluation of $Q$ -Value . . . . .	33
2.4.1	$Q$ -Value Criterion . . . . .	34
2.4.2	Measurement of $Q$ -Value by the Half Power Point Method . . . . .	35
2.4.3	Measurement of $Q$ -Value Using a Nyquist Plot. . . . .	34
2.4.4	Re-evaluation of $Q$ -Value for Rapid Acceleration . . . . .	36
2.4.5	Vibration in Passing Through a Critical Speed . . . . .	39
<b>3</b>	<b>Modal Analysis of Multi-Degree-of-Freedom Systems . . . . .</b>	<b>41</b>
3.1	Equation of Motion for a Multi-dof System . . . . .	41
3.1.1	Multiple Mass Systems . . . . .	41
3.1.2	Equation of Motion for a Two-dof System . . . . .	42
3.1.3	Equation of Motion for a Multi-dof System . . . . .	43
3.2	Modal Analysis (Normal Mode Method) . . . . .	46
3.2.1	Eigenvalue Analysis . . . . .	46
3.2.2	Orthogonality. . . . .	46
3.2.3	Reduced Order Modal Model . . . . .	47
3.2.4	Vibration Response . . . . .	48
3.3	Modal Analysis of Beams. . . . .	53
3.3.1	Natural Frequencies and Eigenmodes . . . . .	53
3.3.2	Correspondence of the Modal Analyses for Multi-dof Systems and Continua . . . . .	53
3.3.3	Reduced Modal Models. . . . .	55
3.3.4	Modal Eccentricity . . . . .	57
3.4	Physical Models from Reduced Modal Models. . . . .	60
3.4.1	Modal Mass. . . . .	60
3.4.2	Equivalent Mass Method. . . . .	62
3.5	Approximation of Natural Frequencies . . . . .	63
3.5.1	Rayleigh's Method . . . . .	63
3.5.2	Method Using Influence Coefficients. . . . .	65
3.5.3	Dunkerley's Formula. . . . .	67
3.5.4	Iterative Method (Power Method) [B4] . . . . .	68
3.5.5	Stiffness Matrix Method . . . . .	70
3.5.6	Transfer Matrix Method . . . . .	73
<b>4</b>	<b>Mode Synthesis and Quasi-modal Method. . . . .</b>	<b>79</b>
4.1	Mode Synthesis Models . . . . .	79
4.1.1	Why Mode Synthesis?. . . . .	79
4.1.2	Guyan Reduction Method . . . . .	80
4.1.3	Mode Synthesis Models . . . . .	84
4.2	Quasi-modal Models. . . . .	90
4.2.1	Principle of the Quasi-modal Model . . . . .	90
4.2.2	Examples of Quasi-modal Models. . . . .	97
4.3	Plant Transfer Function . . . . .	99

<b>5</b>	<b>Unbalance and Balancing</b> . . . . .	105
5.1	Unbalance in a Rigid Rotor . . . . .	105
5.1.1	Static Unbalance and Dynamic Unbalance . . . . .	105
5.1.2	Static Unbalance and Couple Unbalance . . . . .	107
5.1.3	Adverse Effects of Unbalance Vibration . . . . .	107
5.1.4	Residual Permissible Unbalance in a Rigid Rotor . . . . .	108
5.2	Field Single-Plane Balancing (Modal Balancing) . . . . .	111
5.2.1	Relationships among Rotational Pulse, Unbalance and Vibration Vector . . . . .	111
5.2.2	Linear Relationship . . . . .	114
5.2.3	Identifying the Influence Coefficient . . . . .	114
5.2.4	Correction Mass . . . . .	115
5.3	Balancing by the Influence Coefficient Method . . . . .	117
5.4	Modal Balancing . . . . .	122
5.5	$n$ -Plane Balancing or $(n + 2)$ -Plane Balancing? . . . . .	126
5.5.1	Comparison . . . . .	126
5.5.2	Number of Correction Planes Needed for Universal Balancing . . . . .	131
5.5.3	What Is the “2” in the $(n + 2)$ -Plane Method? . . . . .	132
5.6	Balancing of a Rotor Supported by Magnetic Bearings . . . . .	136
5.6.1	Balancing by Feed-Forward (FF) Excitation . . . . .	136
5.6.2	Case Study: Centrifugal Compressor Supported by AMBs [VB245] . . . . .	141
5.7	Balancing without Rotational Pulses . . . . .	143
5.7.1	Four Run Method . . . . .	143
5.7.2	Balancing by Placing a Trial Mass at a Regular Phase Pitch . . . . .	146
5.8	Solution of Two-Plane Balancing . . . . .	147
5.8.1	Principle of Calculation . . . . .	147
5.8.2	In-Phase and Out-of-Phase Balancing . . . . .	149
<b>6</b>	<b>Gyroscopic Effect on Rotor Vibrations</b> . . . . .	153
6.1	Rotordynamics . . . . .	153
6.2	Gyroscopic Moment and the Motion of a Top . . . . .	155
6.2.1	Gyroscopic Moment . . . . .	155
6.2.2	Equation of Motion of a Top and Whirling Solution . . . . .	157
6.3	Natural Vibration of a Rotor System . . . . .	158
6.3.1	Natural Frequency of Whirling . . . . .	158
6.3.2	Influence of the Gyroscopic Factor . . . . .	160
6.3.3	Calculation of the Natural Frequency of Whirling in Multi-dof Rotor System . . . . .	162

6.4	Unbalance Vibration and Resonance. . . . .	163
6.4.1	Condition for Unbalance Resonance and Critical Speed. . . . .	163
6.4.2	Resonance Curves for Unbalance Vibration . . . . .	165
6.4.3	Calculation of Critical Speed of a Multi-dof Rotor System. . . . .	167
6.5	Vibration and Resonance with Base Excitation. . . . .	168
6.5.1	Resonance Conditions . . . . .	168
6.5.2	Forced Vibrational Solution for Base Excitation . . . . .	170
6.5.3	Resonance Curves and Whirling Trajectories . . . . .	172
6.5.4	Case Study: Aseismic Evaluation of a High-Speed Rotor. . . . .	173
6.6	Ball Passing Vibration and Resonance Due to Ball Bearing Defects . . . . .	176
6.6.1	Ball Bearing Specifications . . . . .	176
6.6.2	Excitation by a Recess on Outer Race. . . . .	176
6.6.3	Excitation by a Recess on Inner Race . . . . .	177
6.6.4	Resonance Conditions . . . . .	178
6.6.5	Case Study: Hard Disk Drive (HDD) [VB218]. . . . .	178
<b>7</b>	<b>Approximate Evaluation for Eigenvalues of Rotor-Bearing Systems. . . . .</b>	<b>181</b>
7.1	Equation of Motion for a Single-Degree-of-Freedom Rotor System . . . . .	181
7.2	Vibration Characteristics of a Symmetrically Supported Rotor System . . . . .	183
7.2.1	Natural Frequencies of a Conservative System . . . . .	184
7.2.2	Effects of Non-conservative System Parameters . . . . .	185
7.2.3	Parameter Survey. . . . .	187
7.3	Natural Frequencies of a Rotor Supported by Anisotropic Bearings . . . . .	189
7.3.1	Natural Frequency of a Conservative System . . . . .	189
7.3.2	Elliptical Whirling of a Conservative System . . . . .	190
7.3.3	Influence of Gyroscopic Effect . . . . .	192
7.3.4	Shape of Elliptical Whirling Orbit. . . . .	193
7.3.5	Effects of Non-conservative Parameters. . . . .	195
7.3.6	Parameter Survey. . . . .	197
7.4	Vibration Characteristics of a Jeffcott Rotor . . . . .	199
7.4.1	Equation of Motion . . . . .	199
7.4.2	Vibration Characteristics . . . . .	200
7.4.3	Real Mode Analysis . . . . .	202
7.4.4	Complex Mode Analysis . . . . .	204
7.5	Analysis of Characteristics of Unbalance Vibration . . . . .	205
7.5.1	Equation of Motion . . . . .	205

7.5.2	Unbalance Vibration of an Isotropically Supported Rotor System. . . . .	205
7.5.3	Unbalance Vibration of a Rotor Supported by Anisotropic Bearings . . . . .	206
7.6	Case Study: Vibrations of a Flexible Rotor with Cylindrical Bearings . . . . .	208
7.6.1	Critical Speed Map . . . . .	208
7.6.2	Calculation of Complex Eigenvalues and $Q$ -Values. . . . .	209
7.6.3	Root Loci . . . . .	210
7.6.4	Resonance Curves for Unbalance Vibration . . . . .	211
<b>8</b>	<b>Rotor System Evaluation Using Open-Loop Characteristics . . . . .</b>	<b>213</b>
8.1	Open-Loop Analysis of a Single-dof System . . . . .	213
8.1.1	Open-Loop Frequency Response of a Single-dof System . . . . .	213
8.1.2	Measurement of Open-Loop Frequency Response. . . . .	221
8.2	Modal Open-Loop Frequency Response . . . . .	222
8.2.1	Modal Model. . . . .	222
8.2.2	Modal Open-Loop Frequency Response . . . . .	224
8.3	Open-Loop Frequency Response of a Jeffcott Rotor. . . . .	228
8.3.1	Series Coupling and Phase Lead Function. . . . .	228
8.3.2	Open-Loop Frequency Response . . . . .	229
8.3.3	Gain Cross-Over Frequency and Phase Margin. . . . .	230
8.3.4	Precision of Approximate Solutions . . . . .	232
8.3.5	Optimal Damping . . . . .	234
8.3.6	Frequency Response . . . . .	237
<b>9</b>	<b>Bridge Between Inertial and Rotational Coordinate Systems. . . . .</b>	<b>241</b>
9.1	Vibration Waveforms (Displacement and Stress Caused by Strain) . . . . .	241
9.2	Natural Frequencies . . . . .	243
9.3	Resonance Conditions. . . . .	245
9.4	Representation of Equation of Motion . . . . .	246
9.4.1	Gyroscopic Moment and Coriolis Force . . . . .	246
9.4.2	Case Study: Multi-blade Fan (Sirocco Fan) [VB55] . . . . .	248
<b>10</b>	<b>Vibration Analysis of Blade and Impeller Systems. . . . .</b>	<b>253</b>
10.1	Natural Frequencies of Rotating Structure Systems. . . . .	253
10.1.1	Natural Frequencies of a Thin Disk. . . . .	253
10.1.2	Natural Frequencies of Blades. . . . .	257
10.1.3	Vibration Analysis of Cyclic Symmetry Structural Systems. . . . .	259
10.1.4	General Vibration Analysis of Blades and Impellers in a Rotational Coordinate System . . . . .	266

10.2	Vibration and Resonance of Blades and Impellers . . . . .	268
10.2.1	Conditions for Blade-Shaft Coupled Vibration . . . . .	268
10.2.2	Natural Vibration Modes of Blades and Blade Wheels . . . . .	269
10.2.3	External Forces Acting on Blades and Impellers . . . . .	269
10.2.4	Resonance Conditions of Blades . . . . .	270
10.2.5	Criterion of Blade Resonance: Campbell Diagram . . . . .	273
10.2.6	Case Study: Resonance in Impeller Blades of Centrifugal Compressor [VB958] . . . . .	278
10.3	Blade/Impeller Vibrations Excited at Stationary Side . . . . .	281
10.3.1	Difference in Excitation Methods and Resonance Conditions. . . . .	281
10.3.2	Representation of Vibration of Blades and Impellers in an Inertial Coordinate System . . . . .	281
10.3.3	Resonance Condition 1 . . . . .	283
10.3.4	Resonance Condition 2 . . . . .	285
<b>11</b>	<b>Stability Problems in Rotor Systems . . . . .</b>	<b>287</b>
11.1	Unstable Vibration Due to Internal Damping of a Rotor . . . . .	287
11.1.1	Equation of Motion . . . . .	287
11.1.2	Stability Condition. . . . .	289
11.1.3	Stability Analysis . . . . .	290

Vibrations of Rotating Machinery

Volume 1. Basic Rotordynamics: Introduction to  
Practical Vibration Analysis

Matsushita, O.; Tanaka, M.; Kanki, H.; Kobayashi, M.;  
Keogh, P.

2017, XIII, 360 p. 318 illus., 203 illus. in color.,

Hardcover

ISBN: 978-4-431-55455-4
