

Contents

1	Introduction	1
1.1	Contact and Noncontact Measurements	1
1.2	Brief Historical Sketch of EMAT	4
1.3	Electromagnetic Acoustic Resonance - EMAR	8
	References	9
 Part I Development of EMAT Techniques		
2	Coupling Mechanism	15
2.1	Background	15
2.2	Generation Mechanism	16
2.2.1	Governing Equations	16
2.2.2	Dynamic Magnetic Fields in a Ferromagnetic Material	17
2.2.3	Lorentz Force	21
2.2.4	Magnetization Force	23
2.2.5	Magnetostriction Force	24
2.3	Receiving Mechanisms	31
2.4	Comparison with Measurements	32
2.4.1	SH Plate Wave	33
2.4.2	Bulk Shear Wave	36
	References	37
3	Available EMATs	39
3.1	Bulk-Wave EMATs	39
3.2	Longitudinal-Guided-Wave EMAT for Wires and Pipes	42
3.3	PPM EMAT	45
3.4	EMAT for Torsional Wave along Pipes	46
3.5	Meander-Line-Coil SH-Wave EMAT	46
3.6	SH-Wave EMAT for Chirp Pulse Compression	47
3.7	Axial-Shear-Wave EMAT	50

3.8	SH-Wave EMAT for Resonance in Bolt Head	52
3.9	Rayleigh-Wave EMAT	53
3.10	Line- and Point-Focusing EMATs	53
3.11	Trapped-Torsional-Mode EMAT	56
3.12	EMATs for High-Temperature Measurements	59
3.13	Antenna Transmission Technique for Piezoelectric Materials.	63
	References	65
4	Brief Instruction to Build EMATs	69
4.1	Coil	69
4.2	Magnets	72
4.3	Impedance Matching	73
4.3.1	L-Matching Network	73
4.3.2	Voltage Step-up Ratio	75
4.3.3	Example 1: Meander-Line-Coil EMAT	75
4.3.4	Example 2: Bulk-Wave EMAT with a Spiral Coil	77
 Part II Resonance Spectroscopy with EMATS-EMAR		
5	Principles of EMAR for Spectral Response	83
5.1	Through-Thickness Resonance.	83
5.2	Spectroscopy with Analog Superheterodyne Processing.	86
5.3	Determination of Resonance Frequency and Phase Angle	90
	References	91
6	Free-Decay Measurement for Attenuation and Internal Friction	93
6.1	Difficulty in Attenuation Measurement	93
6.2	Isolation of Ultrasonic Attenuation	94
6.3	Measurement of Attenuation Coefficient	95
6.4	Correction for Diffraction Loss	96
6.4.1	Diffraction Phenomena Radiated by a Bulk-Wave EMAT	97
6.4.2	Correction at a Resonant State	99
6.5	Comparison with Conventional Technique	100
	References	102
 Part III Physical Acoustic Studies		
7	In-Situ Monitoring of Dislocation Mobility	105
7.1	Dislocation Damping Model for Low Frequencies	105
7.2	Elasto-Plastic Deformation in Copper	107
7.3	Point-Defect Diffusion toward Dislocations in Aluminum	114
7.3.1	Diffusion under Stress.	114
7.3.2	Activation Energy for Diffusion	120

7.4	Dislocation Damping after Elastic Deformation in Al-Zn Alloy	123
7.5	Recovery and Recrystallization in Aluminum	126
	References	129
8	Elastic Constants and Internal Friction of Advanced Materials . . .	133
8.1	Mode Control in Resonance Ultrasound Spectroscopy by EMAR	133
8.1.1	Difficulty of Mode Identification	133
8.1.2	Mode Selection Principle	135
8.2	Inverse Calculation for C_{ij} and Q_{ij}^{-1}	137
8.3	Monocrystal Copper	140
8.4	Metal Matrix Composites (SiC _f /Ti-6Al-4V)	145
8.4.1	Difficulty of Measuring C_{ij} of Anisotropic Composites	145
8.4.2	Cross-Ply and Unidirectional Composites	146
8.4.3	C_{ij} and Q_{ij}^{-1} at Room Temperature	147
8.4.4	Micromechanics Modeling	151
8.4.5	Elastic Constants of a Single SiC Fiber	155
8.4.6	EMAR at High Temperatures	156
8.5	High-Temperature Elastic Constants of Titanium through hcp-bcc Phase Transformation	160
8.6	Lotus-Type Porous Copper	162
8.7	Ni-Base Superalloys	166
8.8	Thin Films	168
8.8.1	Anisotropy of Thin Films	168
8.8.2	Thickness Resonance of Layered Plate	169
8.8.3	Free-Vibration Resonance of Layered Rectangular Parallelepiped	172
8.8.4	Ni-P Amorphous Alloy Thin Film	173
8.9	Resonance Measurements at Elevated Temperatures for Piezoelectric Materials	177
8.9.1	Langasite (La ₃ Ga ₅ SiO ₁₄)	178
8.9.2	α -Quartz	183
8.9.3	Phonon-Assisted Hopping Conduction of Carriers in GaN	186
	References	187
9	Resonance Ultrasound Microscopy	193
9.1	Local Elastic Stiffness	193
9.2	Isolation of Oscillator	194
9.3	Vibrational Analysis	196
9.4	Young's Modulus Imaging	199
9.5	Portable Young's Modulus Tester	203
	References	207

10 Nonlinear Acoustics for Microstructural Evolution	209
10.1 Nonlinear Elasticity	209
10.2 Second Harmonic Generation	210
10.3 Collinear Three-Wave Interaction	211
10.4 Nonlinear Resonant Ultrasound Spectroscopy	214
