

Contents

1	Fundamental Equations in Fluid Dynamics.	1
1.1	Fluid and Fluid Dynamics	1
1.2	Stress and Stress Tensors	3
1.2.1	Body Force and Surface Force	3
1.2.2	Stress and Stress Tensors.	3
1.2.3	Stress Tensors in Stationary Fluids	8
1.3	Specifications of Fluid Motions	10
1.3.1	Lagrangian and Eulerian Specifications	10
1.3.2	Streamlines, Path Lines and Streak Lines	14
1.4	Mass Conservation Law	15
1.5	Equations for Perfect Fluids	19
1.5.1	Euler's Equation	19
1.5.2	Equation of State	20
1.5.3	Boundary Conditions.	21
1.6	Local Motion and Deformation of Fluids	23
1.7	Relationship Between Rate-of-Strain and Stress	27
1.8	Navier–Stokes Equation	30
1.9	Energy Equations	31
1.10	Vorticity and Vorticity Equation.	36
	References.	42
2	Dynamics of Perfect Fluids.	45
2.1	Lagrange's Vortex Theorem	45
2.2	Circulation and Vorticity	48
2.3	Circulation Theorem and Vortex Theorem	49
2.3.1	Kelvin's Circulation Theorem	49
2.3.2	Helmholtz Vortex Theorem	50
2.3.3	Flow and Circulation Around a Wing Section.	50

2.4	Bernoulli's Theorem	52
2.4.1	Irrotational Flows	52
2.4.2	Steady Flows	52
2.5	Velocity Potential	54
2.5.1	The Laplace Equation	55
2.5.2	Sources and Sinks	56
2.5.3	Doublet	60
2.5.4	Flow Around a Sphere	62
2.6	Vector Potential	64
2.7	Stream Function	67
2.7.1	Two-Dimensional Flow	67
2.7.2	Three-Dimensional Axisymmetric Flow	70
2.8	Complex Velocity Potential	71
2.9	Simple Two-Dimensional Potential Flows	74
2.9.1	Uniform Flow	74
2.9.2	Flow Around a Corner	74
2.9.3	Sources and Sinks	76
2.9.4	Vortex Filaments	78
2.9.5	Doublet	79
2.9.6	Flow Around a Cylinder	81
2.10	Forces Acting on a Body	84
2.10.1	The Case of Steady Motion	85
2.10.2	The Case of Non-steady Motion	86
2.11	Flow Around a Flat Plate	90
	References	96
3	Theory of Free Surface Waves	97
3.1	Boundary Condition Equations on a Free Surface	97
3.2	Small-Amplitude Progressive Waves	100
3.3	Water Particle Trajectory and Mass Flux	104
3.4	Group Velocity	106
3.5	Principle of Energy Conservation	109
3.6	Progressive Wave Energy and Propagation Velocity	111
3.7	Standing Waves	113
	References	117
4	Dynamics of Viscous Fluids	119
4.1	Reynolds Number and the Law of Similarity	119
4.2	Exact Solutions of the Navier–Stokes Equation	121
4.2.1	Couette Flow	121
4.2.2	Plane Poiseuille Flow	123
4.2.3	Hagen–Poiseuille Flow	124

4.2.4	Rayleigh Flow	126
4.2.5	Couette Flow in Coaxial Cylinders	130
4.2.6	Attenuated Vortex	131
4.3	Flows at Low Reynolds Number	134
4.3.1	Stokes Approximation	134
4.3.2	Slow Flow Around a Sphere Placed in a Uniform Flow	135
4.4	Boundary Layer Theory	140
4.4.1	Flows with High Reynolds Number	140
4.4.2	Boundary Layer Equation	144
4.4.3	Thickness of the Boundary Layer	146
4.4.4	Analytical Solution of Boundary Layer Equation	147
4.4.5	Separation of the Boundary Layer	153
	References	157
5	Turbulent Flow	159
5.1	Transition from Laminar Flow to Turbulent Flow	159
5.1.1	Flow in a Pipe	159
5.1.2	Transition in Flow Behind a Cylinder	160
5.2	Stability Theory of Flow	161
5.3	Basic Equation of Turbulent Flow	165
5.3.1	Average/Mean	166
5.3.2	Equation of Fluid Motion	167
5.3.3	Equation of Mean Flow in Turbulence	168
5.3.4	Equations Relating to the Variation Components	169
5.4	Closure	172
5.5	Shear-Flow Turbulence Near a Wall (Ground)	176
5.6	Law of Similarity in Homogeneous Isotropic Turbulence	178
5.6.1	Homogeneous Isotropic Turbulence	178
5.6.2	Fourier Component Form of the Equation	179
5.6.3	Energy Equation	181
5.6.4	Energy Cascade	184
5.6.5	Law of Similarity in Three-Dimensional Isotropic Turbulent Flows	185
5.6.6	Law of Similarity in Two-Dimensional Isotropic Turbulent Flows	188
5.7	Turbulent Flow Analysis	193
	References	194
6	Dynamics of Stratified Fluids	195
6.1	Hydrostatic Equilibrium	196
6.2	Hydrostatic Stability	197
6.3	Boussinesq Approximation	201

6.4	Internal Gravity Waves	206
6.5	Benard Convection	211
6.5.1	Fundamental Equation and Boundary Conditions	211
6.5.2	Nondimensionalization	212
6.5.3	Basic Field	213
6.5.4	Equation for Small Disturbances	214
6.5.5	Elimination of Variables	214
6.5.6	Fourier Components of the Equation	216
6.5.7	Onset of Convective Motion	217
6.5.8	Disturbance Developing Near Critical Rayleigh Number	219
	References	221
7	Dynamics of Rotating Fluids	223
7.1	Fundamental Equation in a Rotating System	223
7.1.1	Transformation from Fixed Coordinate Frame to Rotating Coordinate System	224
7.1.2	Velocity and Acceleration in a Rotating Coordinate System	225
7.1.3	Fundamental Navier-Stokes Equation in a Rotating System	226
7.2	Simplification of Equations	228
7.2.1	Local Cartesian Coordinates	228
7.2.2	Elimination of Vertical Flow	230
7.2.3	Linearization of Equation	235
7.2.4	The f -plane and β -plane Approximations	236
7.2.5	Special Solution Used in This Chapter	236
7.3	Steady Field in the f -plane Approximation	237
7.3.1	Geostrophic Flow	237
7.3.2	Taylor-Proudman Theorem	239
7.3.3	Ekman's Drift Current	241
7.3.4	Vertical Mean Flow and Ekman Transport	243
7.3.5	Ekman Upwelling and Downwelling	244
7.4	Time Variation Field in the f -plane Approximation	246
7.4.1	Inertial Gravity Waves	246
7.4.2	Inertial Oscillations	247
7.4.3	Kelvin Waves	248
7.4.4	Quasi-geostrophic Component	250
7.5	Time Variation Field in β -plane Approximation	251
7.5.1	Quasi-geostrophic Component in the β -plane	251
7.5.2	Rossby Waves	252
7.5.3	Long Rossby Waves	253
7.6	Steady Field in the β -plane Approximation	254
7.6.1	Steady Vorticity Equation in the β -plane	254

7.6.2	Western Intensification	255
7.6.3	Sverdrup Transport	257
7.7	Rotating Stratified Fluid and General Circulation of the Oceans	257
7.7.1	Extension to a Two-Layered Fluid	258
7.7.2	Internal Radius of Deformation	259
7.7.3	Baroclinic Rossby Waves	261
7.7.4	Thermohaline Circulation and Wind-Driven Circulation	261
	References	262
8	Environmental Fluid Dynamics	263
8.1	Global Energy Balance	263
8.1.1	Radiation Equilibrium	263
8.1.2	Atmospheric General Circulation	267
8.1.3	Oceanic General Circulation	269
8.2	Global Water Circulation	273
8.2.1	Freshwater Balance	273
8.2.2	Freshwater Transport	274
8.2.3	Transport of Water and Nutrients	277
8.2.4	Water Transport and Fish Catch	278
8.3	Global Carbon Circulation	280
8.3.1	Carbon Balance	280
8.3.2	Atmospheric Carbon	282
8.3.3	Oceanic Carbon	283
8.3.4	Carbon on the Seabed	285
	References	286
9	Space Plasma Environment	287
9.1	Space is Not a Vacuum	287
9.2	The Sun	288
9.3	Solar Wind Models	291
9.3.1	Hydrostatic Equilibrium Under Uniform Gravity	292
9.3.2	Hydrostatic Equilibrium for the Gravity Obeying the Inverse-Square Law	293
9.3.3	Streaming Solution in a Cartesian Geometry	294
9.3.4	Streaming Solution in a Spherical Geometry	295
9.3.5	Polytropic Solar Wind	297
9.3.6	Physical Mechanism of the Solar Wind Acceleration	299
9.4	What is a Plasma?	301
9.4.1	Debye Shielding	301
9.4.2	Plasma Parameter	303
9.4.3	Collisional and Collisionless Plasma	304

9.5	Waves in a Cold Plasma.	306
9.5.1	When $\mathbf{B}_0 = 0$	307
9.5.2	When $\mathbf{B}_0 \neq 0$	308
9.6	Magnetohydrodynamics (MHD)	312
9.6.1	Formulation	312
9.6.2	MHD Waves	316
9.7	Magnetosphere	319
9.7.1	Magnetopause	320
9.7.2	Bow Shock, Magnetosheath, and Foreshock	322
9.7.3	Plasmasphere	324
9.7.4	Radiation Belt	324
9.7.5	Magnetotail, Lobe, and Plasma Mantle	325
9.7.6	Ionosphere	325
9.8	Space Weather	326
9.8.1	Solar Flares, CMEs, and Solar Energetic Particles (SEP).	327
9.8.2	Coronal Hole	328
9.8.3	Geomagnetic Storm and Ionospheric Storm	329
9.8.4	Space Weather Effect on Space Systems	329
9.8.5	Space Weather Effects on Ground Systems	330
9.8.6	Space Weather Effects on Terrestrial Weather	331
