

Contents

1	Introduction – Why the Causality?	1
1.1	Hypothesis of Causality	1
1.2	Noncausal Calculus	2
1.3	Some Noncausal Problems	3
1.3.1	Problem in BPE Theory	3
1.3.2	Convolution Product with the White Noise	6
1.3.3	Vibration of a Random String	9
1.4	Plan of the Book	10
2	Preliminary – Causal Calculus	11
2.1	Brownian Motion	12
2.1.1	Some Properties of BM	13
2.1.2	Construction of BM	16
2.2	Itô Integral with Respect to BM	19
2.2.1	Classes of Random Functions	19
2.2.2	Itô Integral for $f \in \mathbf{S}$	20
2.2.3	Extension to $f \in \mathbf{M}$	24
2.2.4	Linearity in Strong Sense	28
2.2.5	Itô Formula	30
2.2.6	About the Martingale $Z_t(\alpha)$	33
2.3	Causal Variants of Itô Integral	36
2.3.1	Symmetric Integrals	36
2.3.2	Anti-Causal Function and Backward Itô Integral	39
2.3.3	The Symmetric Integral for Anti-Causal Functions	42
2.4	SDE	44
2.4.1	Strong Solution	44
2.4.2	Law of the Solution of SDE	48
2.4.3	Martingale Z_t and Girsanov's Theorem	49

3	Noncausal Calculus	51
3.1	Noncausal Stochastic Integral	52
3.2	Question (Q1) – Interpretation	57
3.3	Dependence on the Basis – About Q2	60
3.4	Relation with Causal Calculus – About Q3	65
3.4.1	Regular Basis	68
3.4.2	More About the Integrability of Quasi-Martingales	71
3.4.3	Comments on Riemann-Type Integrals	75
3.5	Miscellaneous Cases	76
3.5.1	Noncausal Integral for Random Fields	76
3.5.2	Case of Fractional Brownian Motion	79
3.6	Appendix – Proof of Lemma 3.4	79
4	Noncausal Integral and Wiener Chaos	83
4.1	Wiener–Itô Decomposition	84
4.2	Skorokhod Integral	85
4.3	Noncausal Integral in Wiener Space	88
5	Noncausal SDEs	91
5.1	Symmetric SDE as Noncausal SDE	92
5.2	SDE with Noncausal Initial Data	93
5.3	Noncausal Itô Formula	98
5.4	SDE in Noncausal Situation	100
5.5	Examples	103
6	Brownian Particle Equation	109
6.1	Definition of Solution	109
6.2	Method of Stochastic Characteristics	113
6.2.1	Bridge to Parabolic Equations	115
6.2.2	A Small Extension	116
6.3	Nonlinear BPEs	117
6.4	Applications	119
6.4.1	Stochastic Burgers’ Equation	119
6.4.2	Numerical Solution of a Nonlinear Diffusion Equation – G. Rosen’s Idea	121
6.4.3	Girsanov’s Theorem?	123
6.4.4	Noncausal Counterpart for Girsanov’s Theorem	124
7	Noncausal SIE	127
7.1	SIE Driven by Brownian Motion	128
7.1.1	Integration by Parts Method	129
7.1.2	A Stochastic Transformation Along Orthonormal Basis	132
7.2	SIE Driven by Brownian Sheet	135

8	Stochastic Fourier Transformation	139
8.1	SFC and SFT	141
8.2	Case of Causal Functions	144
8.2.1	Case of Wiener Functionals	145
8.2.2	Causality Condition	147
8.2.3	Scheme for Reconstruction of Kernels	148
8.2.4	Inversion Formula	149
8.3	Case of Noncausal Wiener Functionals	150
8.3.1	Extension to the Case of General Basis	154
8.4	Case of Noncausal Wiener Functionals – 2	156
8.4.1	Model and Results	156
8.4.2	Method of Fourier Series for Volatility Estimation	157
8.5	Some Direct Inversion Formulae	159
8.5.1	Preliminary	159
8.5.2	Natural SFT	160
8.5.3	Proof of Theorem	163
8.5.4	Another Scheme for Direct Inversion	164
8.5.5	A Variant of the Natural SFT	165
8.5.6	Remarks on SFTs of Different Types	167
8.5.7	About the Linearity of the SFT	167
8.5.8	Extension to Noncausal Case	168
9	Appendices to Chapter 2	171
9.1	Itô Integral with Respect to Martingales	171
9.1.1	Procedure for Introduction	172
9.1.2	Integral for $f \in \mathbf{M}_{2,c}$	174
9.1.3	Some Properties of Square Integrable \mathcal{F}_t -Martingales	175
9.1.4	Some Applications	176
9.1.5	Symmetric Integral with Respect to Martingale	177
10	Appendices 2 – Comments and Proofs	181
10.1	Notes on Chap. 2	181
10.1.1	Martingale Inequalities	181
10.2	Statements in Chap. 2	183
10.2.1	Proof of Proposition 2.7	183
10.2.2	Proof of Lemma 2.2	184
10.2.3	Proof of Theorem 2.5	185
10.2.4	Gronwall's Inequality	187
10.2.5	Uniqueness of B-Derivative	187
10.3	Note on Chap. 3	188
10.4	Notes on Chap. 8	190
10.4.1	Proof of Theorem 8.2	190

10.5	Proof of Theorem 8.4	191
10.5.1	Sketch of Proof for Proposition 8.7	197
10.5.2	Dini's Test.	199
10.5.3	Proof of Proposition 8.9	200
10.5.4	Proof of Proposition 8.10	200
Epilogue	203
References	205
Index	209
