

Contents

1	General Introduction	1
1.1	Surface Plasmon Resonance for Control of the Photon Field	1
1.2	Interaction Between Plasmons and Molecules: Active Plasmonics	5
1.2.1	Use of Plasmons as a Confined Photon Field (Electromagnetic Enhancement)	5
1.2.2	Use of Plasmons for Generating Electron-hole Pairs via Plasmon Decay	6
1.2.3	Formation of the Hybridised State	8
1.3	Surface-enhanced Raman Scattering	8
1.3.1	Normal Raman Scattering	8
1.3.2	The Electromagnetic Effect of Surface-enhanced Raman Scattering	10
1.3.3	Electronic (and Vibronic) Resonance Raman Scattering	11
1.3.4	Chemical Effect of Surface-enhanced Raman Scattering	12
1.4	The Aim of the Study	14
	References	14
2	The Depolarisation Behaviour of Surface-Enhanced Raman Scattering Photons in a Metal Nanodimer Structure	17
2.1	Introduction	17
2.2	Experimental	18
2.3	Results and Discussion	19
2.4	Conclusion	26
	References	27

3	Simultaneous Measurement of Surface-Enhanced Raman Scattering and Conductance Using Mechanically Controllable Break Junction Technique	29
3.1	Introduction	29
3.2	Experimental.	30
3.3	Results and Discussion	32
3.4	Conclusion	35
	References.	35
4	Electronic Excitation of an Isolated Single-Walled Carbon Nanotube by Tuning Electrochemical Potential	37
4.1	Introduction	37
4.2	Experimental.	39
4.3	Results and Discussion	39
4.4	Conclusion	44
	References.	45
5	Raman Enhancement via Polariton States Produced by Strong Coupling Between Localised Surface Plasmons and Dye Excitons in Metal Nanodimers	47
5.1	Introduction	47
5.2	Experimental.	48
5.3	Results and Discussion	49
5.4	Conclusion	55
	References.	56
6	Electrochemical Control of Strong Coupling Between Localised Surface Plasmons and Dye Excitons	59
6.1	Introduction	59
6.2	Experimental.	60
6.3	Results and Discussion	61
6.4	Conclusion	70
6.5	General Conclusion	70
	References.	72
	Curriculum Vitae	75

Studies on the Plasmon-Induced Photoexcitation
Processes of Molecules on Metal Surfaces

Nagasawa, F.

2017, XII, 77 p. 40 illus., 36 illus. in color., Hardcover

ISBN: 978-4-431-56577-2
