

Contents

1	Fibre Bundles and Connections	1
1.1	Principal Bundles	1
1.2	Associated Bundles	14
1.3	Connections	24
1.4	Covariant Exterior Derivative and Curvature	37
1.5	The Koszul Calculus	45
1.6	Bundle Reduction	52
1.7	Parallel Transport and Holonomy	59
1.8	Automorphisms	72
1.9	Invariant Connections	76
2	Linear Connections and Riemannian Geometry	93
2.1	Linear Connections	94
2.2	H -Structures and Compatible Connections	108
2.3	Curvature and Holonomy	127
2.4	Sectional Curvature	138
2.5	Symmetric Spaces	141
2.6	Compatible Connections on Vector Bundles	158
2.7	Hodge Theory. The Weitzenboeck Formula	164
2.8	Four-Dimensional Riemannian Geometry. Self-duality	181
3	Homotopy Theory of Principal Fibre Bundles. Classification	189
3.1	Basics	190
3.2	Fibrations	200
3.3	The Covering Homotopy Theorem	212
3.4	Universal Principal Bundles	217
3.5	The Milnor Construction	230
3.6	Classification of Smooth Principal Bundles	235
3.7	Classifying Mappings Associated with Lie Group Homomorphisms	240
3.8	Universal Connections	244

4	Cohomology Theory of Fibre Bundles. Characteristic Classes.	257
4.1	Basics	258
4.2	Characteristic Classes for the Classical Groups.	267
4.3	Whitney Sum Formula and Splitting Principle	284
4.4	Field Restriction and Field Extension	297
4.5	Characteristic Classes for Manifolds.	308
4.6	The Weil Homomorphism	311
4.7	Genera	336
4.8	The Postnikov Tower and Bundle Classification.	345
5	Clifford Algebras, Spin Structures and Dirac Operators	353
5.1	Clifford Algebras	354
5.2	Spinor Groups	365
5.3	Representations.	377
5.4	Spin Structures and Spin^c -Structures.	393
5.5	Clifford Modules and Dirac Operators	400
5.6	Weitzenboeck Formulae	410
5.7	Elliptic Complexes. The Hodge Theorem.	416
5.8	The Atiyah–Singer Index Theorem.	433
5.9	Applications	454
6	The Yang–Mills Equation.	461
6.1	Gauge Fields. The Configuration Space	461
6.2	The Yang–Mills Equation. Self-dual Connections	471
6.3	The BPST Instanton Family	477
6.4	The ADHM Construction	489
6.5	The Instanton Moduli Space.	508
6.6	Instantons and Smooth 4-manifolds	526
6.7	Stability	530
6.8	Non-minimal Solutions.	538
7	Matter Fields and Model Building	545
7.1	Matter Fields	545
7.2	Yang–Mills–Higgs Systems	549
7.3	The Higgs Mechanism	563
7.4	Magnetic Monopoles	571
7.5	The Bogomolnyi–Prasad–Sommerfield Model	581
7.6	The Seiberg–Witten Model.	586
7.7	The Standard Model of Elementary Particle Physics.	604
7.8	Dimensional Reduction. Basics.	617
7.9	Dimensional Reduction. Model Building	625
8	The Gauge Orbit Space	635
8.1	Introduction	635
8.2	Gauge Orbit Types	637
8.3	The Gauge Orbit Stratification	643

8.4	Geometry of Strata	652
8.5	Classification of Howe Subgroups	664
8.6	Classification of Howe Subbundles.	669
8.7	Enumeration of Gauge Orbit Types	681
8.8	Partial Ordering	684
9	Elements of Quantum Gauge Theory	693
9.1	Path Integral Quantization	694
9.2	The Gribov Problem.	700
9.3	Anomalies.	706
9.4	Hamiltonian Quantum Gauge Theory on the Lattice.	725
9.5	Field Algebra and Observable Algebra.	732
9.6	Including the Nongeneric Strata	741
9.7	A Toy Model	750
	Appendix A: Field Restriction and Field Extension	759
	Appendix B: The Conformal Group of the 4-Sphere	765
	Appendix C: Simple Lie Algebras. Root Diagrams	771
	Appendix D: ζ-Function Regularization	775
	Appendix E: K-Theory and Index Bundles.	777
	Appendix F: Determinant Line Bundles	781
	Appendix G: Eilenberg–MacLane Spaces	787
	References	789
	Index	815

Differential Geometry and Mathematical Physics

Part II. Fibre Bundles, Topology and Gauge Fields

Rudolph, G.; Schmidt, M.

2017, XVI, 830 p. 15 illus., 2 illus. in color., Hardcover

ISBN: 978-94-024-0958-1
