1	CO₂ Storage in Deep Geological Formations: The Concept	1
	John Gale	
1.1	Introduction	1
1.2	What are the Effects of Increased Greenhouse Gas Concentrations in the Atmosphere?	2
1.3	What are the Impacts of Climate Change?	3
1.4	What Options do We Have?	4
1.5	What are the Options to Mitigate CO ₂ Emissions?	5
1.6	What is Carbon Capture and Storage?	7
1.7	Status of Geological Storage of CO ₂	9
1.8	Outlook for CCS	11
	References	12
2	Overview of Processes Occurring During CO₂ Geological Storage and Their Relevance to Key Questions of Performance . . .	15
	Chin-Fu Tsang and Auli Niemi	
2.1	Introduction	15
2.2	Overview of Processes in a Basic Scenario	16
2.3	Geological Settings and Characteristics	19
2.4	Approach	21
2.5	Key Questions	22
	2.5.1 Performance-Related Key Questions	23
	2.5.2 Risk-Related Key Questions	23
2.6	Operational Strategy	24
2.7	Features	25
2.8	Processes	26
	2.8.1 Processes	26
	2.8.2 Process Representations in Macro-Scale Models	27
	2.8.3 Coupled Thermo-Hydro-Mechanical-Chemical Processes	28

2.9	An Attempt to Associate Features (F) and Processes (P) with Key Questions (KQ)	29
2.10	An Example Application to a Study of Large-Scale CO ₂ Geosequestration at Two Potential Sites	29
2.10.1	Case of Illinois Basin, Mount Simon Sandstone Formation	32
2.10.2	Case of Southern San Joaquin Basin	35
2.10.3	Discussion of the Two Cases.	36
2.11	Concluding Remarks.	38
	References.	38
3	Mathematical Modeling of CO₂ Storage in a Geological Formation	39
	Jacob Bear and Jesus Carrera	
3.1	Introduction	39
3.2	Properties of CO ₂ and Saline Water	41
3.2.1	Gibbs Phase Rule	41
3.2.2	Properties of CO ₂	42
3.2.3	Properties of Aqueous Phase	49
3.2.4	Thermodynamic Properties of CO ₂ –H ₂ O Mixture	52
3.2.5	Interfacial Properties	53
3.3	The Flow Model.	54
3.3.1	The General Microscopic Balance Equation for an Extensive Quantity	55
3.3.2	The Microscopic Mass Balance Equation	56
3.3.3	The General Macroscopic Balance Equation for an Extensive Quantity of a Fluid Phase	56
3.3.4	The Single Phase Flow Model.	58
3.3.5	Integro-Differential Balance Equation	60
3.3.6	The Two Phase Flow Model	61
3.4	The Reactive Transport Model	73
3.4.1	Fluxes of Chemical Species.	73
3.4.2	The Mass Balance Equations of Chemical Species	78
3.4.3	Coupling Chemistry to Transport: Simple Examples.	79
3.4.4	The Formulation of Reactions	88
3.4.5	Coupled Equations	98
3.5	The Energy Transport Model	104
3.5.1	The Energy Balance Equation	104
3.5.2	Energy Fluxes	105
3.5.3	Initial and Boundary Conditions	105
3.6	The Solid Matrix Deformation Model.	106
3.6.1	Stress, Strain and Effective Stress	107
3.6.2	The Deformation Model	112
3.6.3	Failure	115

3.6.4	Equilibrium	116
3.6.5	Initial and Boundary Conditions	118
3.7	Concluding Remarks.	119
	Appendix: Primary Variables and Degrees of Freedom.	121
	Extension of Gibbs Phase Rule	121
	Degrees of Freedom for Phases in Motion	122
	Degrees of Freedom Under Approximate Chemical and Thermal Equilibrium	123
