

Contents

1	Introduction and Outline	1
1.1	Introduction	1
1.2	Why “Magic and Anti-intuitive”?	3
1.3	The Modern Quantum Theory	9
1.4	Matter Waves	10
1.5	The Double Slit Experiment	13
1.6	Schrödinger’s Equations and the Model of Atoms	17
1.7	One-Dimensional Quantum Theory	19
1.8	Tunnelling of Electrons	21
1.9	Why “It Ain’t Necessarily so!” in the Title?	22
1.10	From Marbles to Droplets	24
1.11	A Credo Concerning Infinities and Singularities	25
1.12	The Cloud as an Initial Model	26
1.13	The Cloud as a Time-Averaged View of a Trembling (“Zittering”) Electron	29
1.14	Surface Tension in the Role of “Apparent Force”	32
1.15	Pulsating, Hopping and Beating	34
1.16	Interference and Beats	37
1.17	The Wavelength of the Beats Depends on Velocity as in De Broglie’s Relation	40
1.18	Retardation and Self Forces à La Lorentz	43
1.19	Quantifying “De Broglie’s Equation” of the Droplet Theory	47
1.20	The Equilibrium Length of a Droplet	48
1.21	Electrons in Three Guises	52
1.22	Planck’s Constant	52
1.23	To Complicate the Picture: Chaos	54
1.24	The Remainder of the Story Can Be Brief	56
1.25	The Quantisation of Energy in a Potential Well	56
1.26	Tunnelling	58
1.27	How Can Bohr’s Radio Silence Come About?	59

1.28	“Pure Chance” or “Causal but Unpredictable”?	66
1.29	The Most Prominent Hiatus in the Droplet Theory	67
1.30	The “Big Magic” of the Atomic World	68
1.31	The Ultimate Test of the Theory.	68
1.32	How Useful Is the Whole Exercise?	69
2	Strange Behaviour at Quantum Scale: The Full List	77
2.1	Introduction	77
2.2	The Story of the Oscillator as Told in Classical Textbooks . . .	77
2.3	What Textbooks on Quantum Mechanics Tell About the Oscillator	81
3	The Transition Region as Predicted by Quantum Mechanics	87
3.1	Scaling All the Way Down Gives Quantum Results	87
3.2	Upscaling: The Correspondence Principle of Quantum Mechanics.	88
3.3	The Parabolic Potential Well	88
3.4	The Potential Box.	91
3.5	A Continuum of Energy Levels at Macro Scale	92
3.6	Where Came Figs. 3.3 Through 3.5 from?	93
3.7	The Forbidden Points in an Atomic Bowl.	94
3.8	The Probability Density Curve	94
3.9	The Meaning of the Forbidden Points in the Bowl (Or: The Zero-Points in the Probability Density Curve)	96
3.10	The Probability Density of a Harmonic Oscillator	96
3.11	The Macroscopic Probability Density Curve.	98
3.12	Is There Any Correspondence Between the Quantum Probability and the Macro Probability?	99
3.13	Once Again: These Nasty Zero-Points!	101
4	From Rigid Marble to Vibrating Droplet of Charge: Model Assumptions	103
4.1	Warning: Chaps. 4, 5 and 6 Are Rather Technical!	103
4.2	The Modeling Philosophy.	104
4.3	One-Dimensionality	106
4.4	Symmetry	107
4.5	Elongated Shape	107
4.6	Quasi-Static Deformations.	108
4.7	“The Proof of the Pudding Is in the Eating”.	109
5	Determining the Electromagnetic Self Forces	111
5.1	What Was Meant by “Self Force”?	111
5.2	The Mathematical Approach and the Achieved Accuracy. . . .	112
5.3	What Kind of Self Forces Are Found?	115
5.4	Conservation of Energy, Equipartition, and Scaling Effects . . .	136

5.5	The Last Riddle to Be Solved: How Can Electromagnetic Mass Be Made to Comply with the Theory of Relativity?	140
6	A Brief Excursion to Sub-atomic Scales: The Electron, the Muon and the Tau Particle	147
6.1	Cohesion Forces: Real or “Apparent”?	147
6.2	How to Model the Cohesion?	150
6.3	Stable and Unstable Equilibria	157
6.4	Vibrations Around the Equilibrium.	161
7	Dynamics of the Droplet: A Pictorial Representation of the Equations of Motion	167
7.1	What Is an Equation of Motion?	167
7.2	A Historic Example	168
7.3	In Our Case: <i>Two</i> Equations of Motion Needed	169
7.4	The Concept of Physical Analogues	171
7.5	A Mechanical Analogue of the Pulsating Droplet Moving Inside a Potential Well	173
8	First Glimpses of Quantum Behaviour: Matter Waves	179
8.1	The Behaviour of the Analogon if There Is No Restraining Spiral Spring	179
8.2	Why Is the Frequency of the Nodding Influenced by the Rotational (Swaying) Speed?	182
8.3	The Analogue of “De Broglie’s Matter Waves”	184
8.4	A Sack Race Caused by Yet Another Coupling Effect	189
8.5	In Case of Wild Motion: Devastating Effect of the Couplings	192
8.6	Chaos!	192
8.7	Interference of Chaotic Motion with the “Zero-Speed Frequency”	195
8.8	Random Variations of the Chaotic Nodding Motion	197
9	Energy Quantisation in Potential Wells	201
9.1	The Analogue of a Potential Well.	201
9.2	Does the Electromagnetic Field of the Real Droplet of Charge Show Reverberation?	203
9.3	To Simplify Matters: The Potential <i>Box</i> Instead of a Potential <i>Well</i>	204
9.4	The Action of the Coriolis Forces During the Collisions with the Box-Walls.	207
9.5	Quantisation of Velocity and Energy	210
9.6	The Ground Level of the Energy	213
9.7	Why Would the Droplet Prefer to Be in a Stationary State?	214
9.8	A Further Remark on the “Reverberating Environment”.	215

10	Still More (Non)Glimpses: The Droplet Is Sometimes Invisible	217
10.1	Magical Disappearances in Usual Quantum Mechanics	217
10.2	What Determines the “Visibility” of a Droplet of Charge?	220
10.3	A First Clue About the Conditions to Be Satisfied for Radiation.	221
10.4	Balance of Energy Within the Droplet	224
10.5	The Change of the Energy Partition During Radiation	226
10.6	Radiation <i>Can</i> Be Started up at Certain Places Inside a Potential Well	227
11	Schrödinger’s Equation.	231
11.1	The Crucial Question: Is All This True for a General Potential Well?	231
11.2	The Parabolic Potential Well as Another Example: Fortunately OK.	231
11.3	What Is “Local Wavelength”?	236
11.4	Schrödinger’s Equation!	240
11.5	How Is Schrödinger’s Equation Used?	243
11.6	Quantisation of Energy	245
11.7	Do Less Cumbersome Methods for Reconstructing the Beat Pattern Exist, Other Than Trial and Error?	246
11.8	The Kinship Between the Wave Functions of Quantum Mechanics and the Beat Patterns in Droplet Theory.	248
12	On Radiation and Radio Silence; Interaction Between Charges and Radiation	251
12.1	Radiation Patterns Far Away and Close to the Radiating Charge	251
12.2	Schott-Energy	254
12.3	The Observability of the Radiation Field	257
12.4	Another Consequence of the Limited Observability: Red Is Red and Blue Is Blue	261
12.5	How Can Radio Silence Come About?	262
12.6	Does Anti-causality not Creep in Again Through the Back Door?	263
12.7	The Structure of the Non-radiative Field, as Found by a Mathematical Analysis	265
12.8	Radiation Pressure	270
12.9	Asymmetries in the Electromagnetic Field	272
12.10	Conservation of Both Energy and Momentum	273
12.11	Another Restriction Due to Conservation of Momentum: Directivity of Energy Transfers.	275

13 On Bohr's Radiation "Out of Nothing", and On Photons, the "Particles With a Wavelength"	279
13.1 The Frequency of Emitted Light: Bohr's Stroke of Genius.	279
13.2 Bohr's Frequency as Derived by the Droplet Theory, and Planck's Formula	282
13.3 A Mental Picture of the "Photon" Possible?	287
13.4 On the Receiving Side, the Photon-View Has a Few More Mysteries in Store	291
13.5 A Tentative Visualisation of Emission and Immission According to Droplet Theory	294
13.6 The Photoelectric Effect	295
13.7 The Model of the Metal Plate in the Photoelectric Cell	297
13.8 Photoelectric Effect from the Point of View of the Droplet Theory	299
14 Summing Up the Successes and the Remaining Mysteries	305
14.1 Two Subjects in This Chapter: Successes and Mysteries (as yet?)	305
14.2 The Culprit of It All: Pulsation.	306
14.3 The "Sack-Race" of the Droplet; Influence of Average Speed	308
14.4 Chaotic Pulsation: A "Drunkard's Sack Race"	309
14.5 Bohr's Radio Silence	310
14.6 The Break of Radio Silence at Random Times	311
14.7 The Conditions Inside a Potential Well.	311
14.8 Beats in the Amplitude of the Pulsation: Comparable with De Broglie's Matter Waves.	312
14.9 Planck's Constant Found to Be Expressible in Terms of Classical Constants.	314
14.10 Quantisation of Energy in a Potential Box	315
14.11 Zero-Point Energy.	317
14.12 Energy Width	317
14.13 The Droplet Is "Invisible" in Certain Places of the Box (Corresponding to "Zero Position Probability" in Quantum Mechanics)	318
14.14 When Radiating, the Emission Is in the Form of Isolated Energy Flashes	320
14.15 The Colour of the Emitted Light Flashes	322
14.16 The Energy-Colour Relation in the Emitted Light Flashes and in Photons	325
14.17 The Interactions of the Shell of Energy Do not Differ from the Effects of a Photon.	325
14.18 Energy Quantisation in Parabolic Potential Wells	328
14.19 Violation of the Classical Limits of Motion in a Well	329
14.20 Tunnelling Out of the Well.	331

14.21	General Wells: The Beat Patterns Satisfy Schrödinger's Equation	331
14.22	Remaining Riddles	332
15	A Chapter Full of Speculations: Bohr's Atom, Schrödinger's Cat, "Spooky" Interactions, and the Double-Slit.	337
15.1	The Most Fascinating Magic Phenomena of Quantum Mechanics.	337
15.2	Bohr's Atom Model	338
15.3	Superposition of States (The Magic of Schrödinger's Cat), or Superposition of Frequencies (A Common Phenomenon)?	340
15.4	Telepathic ("Spooky") Contact Between Widely Separated Particles (Or: Superluminal Signalling?)	343
15.5	One Particle, at the Same Time in Two Different Places	351
15.6	Emergent Quantum Mechanics and the Bell Test	355
16	Conclusions: The Direction Towards Einstein's "Hidden Variable"?	365
	Appendix A: General	369
	Appendix B: Matched Asymptotic Expansion Procedure (Principles)	377
	Appendix C: The Potential Fields of a Moving Point Charge	387
	Appendix D: Self Forces on a Droplet of Charge (Translation Direction)	399
	Appendix E: Squeezing Self Forces (Pulsation)	413
	Appendix F: The Equations of Motion and Their Solution	421
	Appendix G: De Broglie's Formula and Planck's Constant; the Concept of Photons	449
	Appendix H: The Droplet of Charge Within a Potential Well: Energy Quantisation.	471
	Appendix I: Miscellaneous Subjects.	519
	Appendix J: The Radiation Field.	527
	Appendix K: Combining the Droplet's Motion and the Radiation Field: Bohr's Radio Silence	533
	References	555
	Index	557

The Atomic World Spooky? It Ain't Necessarily So!
Emergent Quantum Mechanics, How the Classical Laws
of Nature Can Conspire to Cause Quantum-Like
Behaviour

van Holten, T.

2017, XX, 561 p. 241 illus., 191 illus. in color.,
Hardcover

ISBN: 978-94-6239-233-5
