

# Contents

<b>1</b>	<b>Introduction</b>	1
1.1	Linear Equations	2
1.2	Univariate Linear Matrix Equations	5
1.2.1	Lyapunov Matrix Equations	5
1.2.2	Kalman-Yakubovich and Normal Sylvester Matrix Equations	9
1.2.3	Other Matrix Equations	13
1.3	Multivariate Linear Matrix Equations	16
1.3.1	Roth Matrix Equations	16
1.3.2	First-Order Generalized Sylvester Matrix Equations	18
1.3.3	Second-Order Generalized Sylvester Matrix Equations	24
1.3.4	High-Order Generalized Sylvester Matrix Equations	25
1.3.5	Linear Matrix Equations with More Than Two Unknowns	26
1.4	Coupled Linear Matrix Equations	27
1.5	Complex Conjugate Matrix Equations	30
1.6	Overview of This Monograph	33
<b>2</b>	<b>Mathematical Preliminaries</b>	35
2.1	Kronecker Products	35
2.2	Leverrier Algorithms	42
2.3	Generalized Leverrier Algorithms	46
2.4	Singular Value Decompositions	49
2.5	Vector Norms and Operator Norms	52
2.5.1	Vector Norms	52
2.5.2	Operator Norms	56
2.6	A Real Representation of a Complex Matrix	63
2.6.1	Basic Properties	64
2.6.2	Proof of Theorem 2.7	68

2.7	Consimilarity . . . . .	73
2.8	Real Linear Spaces and Real Linear Mappings . . . . .	75
2.8.1	Real Linear Spaces . . . . .	76
2.8.2	Real Linear Mappings . . . . .	81
2.9	Real Inner Product Spaces . . . . .	83
2.10	Optimization in Complex Domain . . . . .	87
2.11	Notes and References . . . . .	90

## Part I Iterative Solutions

<b>3</b>	<b>Smith-Type Iterative Approaches . . . . .</b>	<b>97</b>
3.1	Infinite Series Form of the Unique Solution . . . . .	98
3.2	Smith Iterations . . . . .	103
3.3	Smith ( $I$ ) Iterations . . . . .	105
3.4	Smith Accelerative Iterations . . . . .	108
3.5	An Illustrative Example . . . . .	115
3.6	Notes and References . . . . .	116
<b>4</b>	<b>Hierarchical-Update-Based Iterative Approaches . . . . .</b>	<b>119</b>
4.1	Extended Con-Sylvester Matrix Equations . . . . .	121
4.1.1	The Matrix Equation $AXB + C\bar{X}D = F$ . . . . .	121
4.1.2	A General Case . . . . .	126
4.1.3	Numerical Examples . . . . .	133
4.2	Coupled Con-Sylvester Matrix Equations . . . . .	135
4.2.1	Iterative Algorithms . . . . .	137
4.2.2	Convergence Analysis . . . . .	139
4.2.3	A More General Case . . . . .	146
4.2.4	A Numerical Example . . . . .	147
4.3	Complex Conjugate Matrix Equations with Transpose of Unknowns . . . . .	149
4.3.1	Convergence Analysis . . . . .	151
4.3.2	A Numerical Example . . . . .	157
4.4	Notes and References . . . . .	158
<b>5</b>	<b>Finite Iterative Approaches . . . . .</b>	<b>163</b>
5.1	Generalized Con-Sylvester Matrix Equations . . . . .	163
5.1.1	Main Results . . . . .	164
5.1.2	Some Special Cases . . . . .	172
5.1.3	Numerical Examples . . . . .	175
5.2	Extended Con-Sylvester Matrix Equations . . . . .	179
5.2.1	The Matrix Equation $AXB + C\bar{X}D = F$ . . . . .	179
5.2.2	A General Case . . . . .	192
5.2.3	Numerical Examples . . . . .	195

5.3	Coupled Con-Sylvester Matrix Equations . . . . .	198
5.3.1	Iterative Algorithms . . . . .	198
5.3.2	Convergence Analysis . . . . .	199
5.3.3	A More General Case. . . . .	206
5.3.4	Numerical Examples. . . . .	207
5.3.5	Proofs of Lemmas 5.15 and 5.16 . . . . .	209
5.4	Notes and References . . . . .	221

## Part II Explicit Solutions

<b>6</b>	<b>Real-Representation-Based Approaches.</b> . . . .	225
6.1	Normal Con-Sylvester Matrix Equations . . . . .	226
6.1.1	Solvability Conditions . . . . .	226
6.1.2	Uniqueness Conditions . . . . .	230
6.1.3	Solutions. . . . .	233
6.2	Con-Kalman-Yakubovich Matrix Equations. . . . .	241
6.2.1	Solvability Conditions . . . . .	241
6.2.2	Solutions. . . . .	243
6.3	Con-Sylvester Matrix Equations. . . . .	250
6.4	Con-Yakubovich Matrix Equations. . . . .	259
6.5	Extended Con-Sylvester Matrix Equations. . . . .	267
6.6	Generalized Con-Sylvester Matrix Equations . . . . .	270
6.7	Notes and References . . . . .	273
<b>7</b>	<b>Polynomial-Matrix-Based Approaches.</b> . . . .	275
7.1	Homogeneous Con-Sylvester Matrix Equations . . . . .	276
7.2	Nonhomogeneous Con-Sylvester Matrix Equations. . . . .	284
7.2.1	The First Approach . . . . .	285
7.2.2	The Second Approach . . . . .	293
7.3	Con-Yakubovich Matrix Equations. . . . .	294
7.3.1	The First Approach . . . . .	295
7.3.2	The Second Approach . . . . .	305
7.4	Extended Con-Sylvester Matrix Equations. . . . .	307
7.4.1	Basic Solutions . . . . .	308
7.4.2	Equivalent Forms. . . . .	311
7.4.3	Further Discussion . . . . .	316
7.4.4	Illustrative Examples . . . . .	318
7.5	Generalized Con-Sylvester Matrix Equations . . . . .	321
7.5.1	Basic Solutions . . . . .	322
7.5.2	Equivalent Forms. . . . .	324
7.5.3	Special Solutions . . . . .	329
7.5.4	An Illustrative Example . . . . .	332
7.6	Notes and References . . . . .	334

<b>8</b>	<b>Unilateral-Equation-Based Approaches</b>	335
8.1	Con-Sylvester Matrix Equations	336
8.2	Con-Yakubovich Matrix Equations	343
8.3	Nonhomogeneous Con-Sylvester Matrix Equations	349
8.4	Notes and References	354
<b>9</b>	<b>Conjugate Products</b>	355
9.1	Complex Polynomial Ring $(\mathbb{C}[s], +, \otimes)$	355
9.2	Division with Remainder in $(\mathbb{C}[s], +, \otimes)$	359
9.3	Greatest Common Divisors in $(\mathbb{C}[s], +, \otimes)$	362
9.4	Coprimeness in $(\mathbb{C}[s], +, \otimes)$	365
9.5	Conjugate Products of Polynomial Matrices	366
9.6	Unimodular Matrices and Smith Normal Form	371
9.7	Greatest Common Divisors	377
9.8	Coprimeness of Polynomial Matrices	379
9.9	Conequivalence and Consimilarity	382
9.10	An Example	385
9.11	Notes and References	385
<b>10</b>	<b>Con-Sylvester-Sum-Based Approaches</b>	389
10.1	Con-Sylvester Sum	389
10.2	Con-Sylvester-Polynomial Matrix Equations	394
10.2.1	Homogeneous Case	394
10.2.2	Nonhomogeneous Case	397
10.3	An Illustrative Example	400
10.4	Notes and References	402
<b>Part III Applications in Systems and Control</b>		
<b>11</b>	<b>Stability for Antilinear Systems</b>	405
11.1	Stability for Discrete-Time Antilinear Systems	407
11.2	Stochastic Stability for Markovian Antilinear Systems	410
11.3	Solutions to Coupled Anti-Lyapunov Equations	423
11.3.1	Explicit Iterative Algorithms	424
11.3.2	Implicit Iterative Algorithms	428
11.3.3	An Illustrative Example	432
11.4	Notes and References	435
11.4.1	Summary	435
11.4.2	A Brief Overview	436
<b>12</b>	<b>Feedback Design for Antilinear Systems</b>	439
12.1	Generalized Eigenstructure Assignment	439
12.2	Model Reference Tracking Control	442
12.2.1	Tracking Conditions	443
12.2.2	Solution to the Feedback Stabilizing Gain	445
12.2.3	Solution to the Feedforward Compensation Gain	446
12.2.4	An Example	447

12.3	Finite Horizon Quadratic Regulation. . . . .	450
12.4	Infinite Horizon Quadratic Regulation. . . . .	461
12.5	Notes and References . . . . .	467
12.5.1	Summary . . . . .	467
12.5.2	A Brief Overview . . . . .	468
<b>References . . . . .</b>		<b>471</b>
<b>Index . . . . .</b>		<b>485</b>

Complex Conjugate Matrix Equations for Systems and Control

Wu, A.-G.; Zhang, Y.

2017, XVIII, 487 p. 13 illus., Hardcover

ISBN: 978-981-10-0635-7
