Part I Pipe-Z

1 Introduction	3
1.1 Introduction	3
1.1.1 The Pipe-Z Module	5
1.2 Alignment of Modules Along a Guide Path	6
1.2.1 Self-intersections	8
1.2.2 Reduction of the Number of Twist Angles k	8
References	9
2 Pipe-Z Optimization	11
2.1 Introduction	11
2.2 Trapezoid-Tiling of a Planar <i>Unknot</i>	12
2.2.1 Alignment of Trapezoidal Units to the Guide Path	13
2.3 Random Search	14
2.3.1 Domain Visualization	14
2.4 Optimization of a PZ Knot 6_3	15
References	17
3 Pipe-Z Manipulatives	19
3.1 Introduction	19
3.2 Virtual Pipe-Z Manipulatives	20
3.2.1 Virtual PZ Knotting	21
3.3 Physical Pipe-Z Manipulatives	23
3.3.1 Fabrication of the Physical Model of Pipe-Z Module	25
References	29
4 Arm-Z	31
4.1 Introduction	31
4.2 Extension	32
4.3 Translation	32
4.4 Flexure	33
References	35

5 Deployable Pipe-Z	37
5.1 Introduction	37
5.2 Foldable Pipe-Z Module (fPZM)	38
5.2.1 Folding Analysis of fPZM	38
5.2.2 Folding of a Multi-module Deployable Pipe-Z (<i>dPZ</i>)	40
5.2.3 “Outside-In”	41
5.2.4 “Inside-Out”	42
5.2.5 Collapsible Concentric Toric Rings	43
5.3 Low-Fidelity Prototype of Deployable Pipe-Z	44
References	44

Part II Truss-Z

6 Introduction	47
6.1 Modularity Versus Free-Form	47
6.2 Truss-Z as a Ramp	50
6.3 Truss-Z Module (TZM)	52
6.4 Preliminary Static Analysis of TZM	53
6.4.1 Topological Properties of TZM	54
6.4.2 Rigidity of TZM	56
6.4.3 Truss-Z as an Earthquake-Resistant Structure	57
6.5 Deployable Truss-Z	58
6.5.1 Foldable TZM (fTZM)	58
6.6 Fabrication of TZM	58
6.6.1 Template System	61
6.6.2 The Resin Casting	64
References	67
7 Single-Branch Truss-Z (STZ)	69
7.1 Alignment of STZ to the Given Path	69
7.2 Backtracking	71
7.2.1 Case Study I	73
7.3 Optimization of STZ	77
7.3.1 Encoding of STZ Planar Layout	78
7.3.2 Objective (cost) Function	78
7.3.3 Calibration of Weights for the Cost Function	80
7.3.4 Tournament Selection	81
7.3.5 Mutation	82
7.3.6 Stop Criterion	83
7.4 Evolution Strategy	83
7.5 Genetic Algorithm (GA)	86
7.5.1 Recombination	86
7.5.2 GA with Uniform Crossover (GA_{UX})	86
7.5.3 GA with One-Point Crossover (GA_{OPX})	87
7.5.4 Interpretation of the Results	88

7.6	Graph-Theoretical Method	90
7.6.1	The <i>GT</i> Experiment	95
7.6.2	Can a TZ Path Be Even Shorter?	96
7.6.3	Case Study II	98
7.7	The Supporting Structure	101
	References	103
8	Multi-branch Truss-Z (MTZ)	105
8.1	Creation of a MTZ Network	105
8.2	Alignment of MTZ to Given Paths	106
8.3	Backtracking for MTZ	108
8.4	Optimization of MTZ with Evolution Strategy	109
8.5	Transformation Operators	110
8.5.1	Transformation of MTZ_C to MTZ_6	113
8.6	A Quasi-Optimization	113
8.6.1	Evolution Strategy-Based Experiment (ES*)	114
8.7	Case Study III.	117
8.7.1	The Results	118
	Reference.	120
	Glossary	121

Discrete Optimization in Architecture

Extremely Modular Systems

Zawidzki, M.
