1	Introduction	1
1.1	Background	1
1.2	Major Challenges of the Research	3
1.3	Monograph Organization	5
	References	7
2	Overview on Performance-Based Engineering Under Multihazard Environments	9
2.1	Performance-Based Engineering and Design	9
2.1.1	Performance-Based Seismic Design (PBSD)	9
2.1.2	Performance-Based Wind-Resistant Design (PBWD)	10
2.1.3	Prediction of Typhoon and Its Risk by Simulation	13
2.1.4	Uncertainty Modeling in Wind Engineering	15
2.2	Dynamic Response Analysis of High-Rise Buildings	17
2.2.1	Analysis Method in Time Domain	17
2.2.2	Analysis Method in Frequency Domain	22
2.3	Structural Design Optimization	27
2.3.1	Classical Optimization Method	27
2.3.2	Formulations for Structural Optimization	29
2.3.3	Dynamic Response Optimization	32
2.4	Reliability-Based Design Optimization	35
2.4.1	Reliability Analysis Method	35
2.4.2	Reliability Index Optimization Approach	40
2.4.3	Performance Measure Optimization Approach	41
2.5	Summary	42
	References	43
3	A Hybrid RANS and Kinematic Simulation of Wind Load Effects on Full-Scale Tall Buildings	55
3.1	Introduction	55
3.2	RANS Simulation of Mean Flow Field	58

3.3	Kinematic Simulation of Fluctuating Velocity Field and Poisson Equation	60
3.3.1	Energy Density of Anisotropic Turbulence Near the Ground	60
3.3.2	Energy Density of Anisotropic Turbulence Near the Ground	63
3.3.3	Pressure Fluctuations Associated with Simulated Velocity Fields	65
3.4	Case Study	66
3.4.1	Wind Tunnel-Based Pressure Measurements	66
3.4.2	Numerical Simulation	67
3.5	Results and Discussion.	71
3.5.1	RANS Simulation	72
3.5.2	Kinematic Simulation	72
3.5.3	Results of Pressure Fluctuations	74
3.6	Conclusions	79
	References	79
4	Peak Distributions and Peak Factors of Wind-Induced Pressure Processes on Tall Buildings	83
4.1	Introduction	83
4.2	Peak Factors for Non-Gaussian Processes	85
4.2.1	Hermite Moment-Based Method	85
4.2.2	Revised Hermite Model (RHM)	86
4.2.3	Generalized Peak Factor Considering Bandwidth Parameter.	87
4.2.4	Skewness-Dependent Peak Factor	87
4.3	Peak Distribution Models	88
4.4	Asymptotic Extreme Value Distribution and Fractile Levels	89
4.5	Translated-Peak-Process Method	91
4.5.1	Determination of Statistical Parameters of Weibull Distribution	91
4.5.2	Procedure of Translated-Peak-Process (TPP) Method	92
4.6	Comparison of Different Approaches Using the CAARC Building.	92
4.6.1	Wind Tunnel-Based Pressure Measurements	92
4.6.2	Non-Gaussian Properties of Wind Pressure.	93
4.6.3	Peak Factor Results and Discussions	94
4.7	Summary	102
	References	102

5	Time-Domain Dynamic Drift Optimization of Tall Buildings	
	Subject to Stochastic Excitation	105
5.1	Introduction	105
5.2	Dynamic Response Analysis of Tall Buildings	106
5.2.1	Equations of Motion	106
5.2.2	Vibration Analysis in Time Domain	108
5.2.3	Drift Performance of a Tall Building Under Wind and Earthquake	109
5.3	Time-Variant Reliability and Probabilistic Constraints	111
5.3.1	The Reliability of Top Deflection Performance	111
5.3.2	Bound Estimation of System Reliability for Interstory Drift Ratio	112
5.4	Dynamic Response Optimization	113
5.4.1	Formulation of Dynamic Response Optimization	113
5.4.2	Treatment and Explicit Formulation of Time-Dependent Drift Constraints	114
5.4.3	Explicit Formulation of Probabilistic Drift Constraints	116
5.4.4	Optimality Criteria Method and Design Procedure	118
5.5	Case Study	120
5.5.1	Performance of the CAARC Building Under Earthquake	120
5.5.2	Dynamic Response Optimization for Wind Hazards	121
5.6	Summary	130
	References	130
6	Integrated Structural Optimization and Vibration Control for Improving Dynamic Performance of Tall Buildings	133
6.1	Introduction	133
6.2	A Benchmark Tall Building Under Wind Hazard	134
6.3	Optimal Performance-Based Design Problem	137
6.3.1	Optimal Design Problem Formulation	137
6.3.2	Explicit Formulation of Elastic Drift and Acceleration Constraints	139
6.3.3	Optimality Criteria Method	141
6.3.4	Design Optimization Results for the Uncontrolled Building	141
6.4	Vibration Control Using Smart Tuned Mass Damper (STMD)	142
6.4.1	Smart Tuned Mass Damper (STMD)	143
6.4.2	Control Algorithm and Controlled Building Responses	143
6.4.3	An Evaluation on the Capital Cost of the STMD	146
6.4.4	An Empirical Cost Model of the STMD	149
6.5	Optimal Performance-Based Design Integrating Vibration Control	150
6.5.1	Optimal Design Problem for a Controlled Building	150
6.5.2	Necessary Optimality Conditions	151

6.5.3	Design Optimization Results for the Controlled Building.	152
6.5.4	Cost Comparison Among Vibration Control and Design Optimization Results.	154
6.6	Summary	154
	References	155
