

# Contents

<b>1</b>	<b>Introduction to Grey Systems Research</b>	<b>1</b>
1.1	Appearance and Growth of Grey Systems Research	1
1.2	Development History and Current State	2
1.3	Characteristics of Uncertain System	5
1.3.1	Incomplete Information	5
1.3.2	Inaccuracies in Data	6
1.3.3	The Scientific Principle of Simplicity	7
1.3.4	Precise Models Suffer from Inaccuracies	8
1.4	Comparison of Several Studies of Uncertain Systems	10
1.5	Most Actively Studied Uncertain Systems Theories	11
1.6	Elementary Concepts of Grey System	13
1.7	Fundamental Principles of Grey Systems	14
<b>2</b>	<b>The Grey Systems Theory Framework</b>	<b>17</b>
2.1	Grey Models and Framework	17
2.2	The Thinking, Models and Framework of Grey Systems Theory	18
2.2.1	Grey Numbers and Its Operations	18
2.2.2	The Grey Sequence Operator	19
2.2.3	The Grey Prediction Models	20
2.2.4	Grey Incidence Analysis Models	21
2.2.5	Grey Clustering Evaluation Models	22
2.2.6	Grey Decision-Making Models	24
2.2.7	Combined Grey Models	25
2.2.8	Grey Control Models	25
2.3	The New Framework and Main Components of Grey Systems Theory	26
<b>3</b>	<b>Grey Numbers and Their Operations</b>	<b>29</b>
3.1	Grey Numbers	29
3.2	The Whitenization of a Grey Number and Degree of Greyiness	30

3.3	Degree of Greyness Defined by Axioms. . . . .	33
3.4	The Operations of Interval Grey Numbers . . . . .	35
3.5	General Grey Numbers and Their Operations. . . . .	37
3.5.1	Reduced Form of Interval Grey Numbers . . . . .	37
3.5.2	General Grey Numbers and Their Reduced Form . . . . .	38
3.5.3	Synthesis of Degree of Greyness and Operations of General Grey Numbers . . . . .	40
<b>4</b>	<b>Sequence Operators and Grey Data Mining . . . . .</b>	<b>45</b>
4.1	Introduction . . . . .	45
4.2	Systems Under Shocking Disturbances and Buffer Operators . . . . .	47
4.2.1	The Trap for Shocking Disturbed System Forecasting . . . . .	47
4.2.2	Axioms that Define Buffer Operators . . . . .	48
4.2.3	Properties of Buffer Operators. . . . .	49
4.3	Construction of Practically Useful Buffer Operators . . . . .	50
4.3.1	Weakening Buffer Operators . . . . .	50
4.3.2	Strengthening Buffer Operators . . . . .	54
4.3.3	The General Form of Buffer Operator . . . . .	55
4.4	Average Operator . . . . .	57
4.5	The Quasi-Smooth Sequence and Stepwise Ratio Operator . . . . .	58
4.6	Accumulating and Inverse Accumulating Operators . . . . .	60
4.7	Exponentiality of Accumulating Generation . . . . .	62
<b>5</b>	<b>Grey Incidence Analysis Models. . . . .</b>	<b>67</b>
5.1	Introduction . . . . .	67
5.2	Grey Incidence Factors and Set of Grey Incidence Operators . . . . .	69
5.3	Degrees of Grey Incidences Model. . . . .	72
5.4	Absolute Degree of Grey Incidence Model. . . . .	76
5.4.1	Relative and Synthetic Degree of Grey Incidence Models . . . . .	81
5.4.2	Similarity, Closeness and Three-Dimensional Degree of Grey Incidence Models. . . . .	85
5.5	Superiority Analysis . . . . .	92
5.5.1	Practical Application . . . . .	99
<b>6</b>	<b>Grey Clustering Evaluation Models. . . . .</b>	<b>105</b>
6.1	Introduction . . . . .	105
6.2	Grey Incidence Clustering Model . . . . .	107
6.3	Variable Weight Grey Clustering Model. . . . .	110
6.4	Fixed Weight Grey Clustering Model. . . . .	117

6.5	Grey Clustering Evaluation Models Based on Mixed Possibility Functions. . . . .	121
6.5.1	Grey Clustering Evaluation Model Based on End-Point Mixed Possibility Functions . . . . .	121
6.5.2	Grey Clustering Evaluation Model Based on Center-Point Mixed Possibility Functions. . . . .	127
6.6	Practical Applications . . . . .	131
<b>7</b>	<b>Series of GM Models. . . . .</b>	<b>141</b>
7.1	Introduction . . . . .	141
7.2	The Four Basic Forms of GM (1, 1). . . . .	142
7.2.1	The Basic Forms of Model GM (1, 1). . . . .	142
7.2.2	Properties and Characteristics of the Basic Model. . . . .	145
7.3	Suitable Ranges of Different GM (1, 1) . . . . .	149
7.3.1	Suitable Sequences of Different GM (1, 1) . . . . .	149
7.3.2	Applicable Ranges of EGM. . . . .	157
7.4	Remnant GM (1,1) Model . . . . .	160
7.5	Group of GM (1, 1) Models . . . . .	165
7.6	The Models of GM ( $r, h$ ) . . . . .	169
7.6.1	The Model of GM (0, $N$ ) . . . . .	169
7.6.2	The Model of GM (1, $N$ ) . . . . .	171
7.6.3	The Grey Verhulst Model . . . . .	173
7.6.4	The Models of GM ( $r, h$ ) . . . . .	176
7.7	Practical Applications . . . . .	178
<b>8</b>	<b>Combined Grey Models . . . . .</b>	<b>183</b>
8.1	Grey Econometrics Models. . . . .	183
8.1.1	Determination of Variables Using the Principles of Grey Incidence . . . . .	183
8.1.2	Grey Econometrics Models . . . . .	184
8.2	Combined Grey Linear Regression Models. . . . .	187
8.3	Grey Cobb-Douglas Model. . . . .	190
8.4	Grey Artificial Neural Network Models . . . . .	191
8.4.1	BP Artificial Neural Model and Computational Schemes . . . . .	191
8.4.2	Steps in Grey BP Neural Network Modeling. . . . .	192
8.5	Grey Markov Model. . . . .	194
8.5.1	Grey Moving Probability Markov Model . . . . .	194
8.5.2	Grey State Markov Model. . . . .	195
8.6	Combined Grey-Rough Model . . . . .	197
8.6.1	Rough Membership, Grey Membership and Grey Numbers . . . . .	197
8.6.2	Grey Rough Approximation . . . . .	199
8.6.3	Combined Grey Clustering and Rough Set Model. . . . .	202
8.7	Practical Applications . . . . .	203

<b>9</b>	<b>Techniques for Grey Systems Forecasting</b>	209
9.1	Introduction	209
9.2	Interval Forecasting	211
9.3	Grey Disaster Forecasting	215
9.4	Wave Form Forecasting	219
9.5	System Forecasting	221
9.5.1	The Five-Step Modeling Process	221
9.5.2	System Models for Prediction	222
9.6	Practical Applications	223
<b>10</b>	<b>Grey Models for Decision-Making</b>	227
10.1	Introduction	227
10.2	Grey Target Decisions	229
10.3	Other Approaches to Grey Decision	234
10.3.1	Grey Incidence Decision	234
10.3.2	Grey Development Decision	239
10.3.3	Grey Clustering Decision	241
10.4	Multi-attribute Intelligent Grey Target Decision Model	241
10.4.1	The Uniform Effect Measure	242
10.4.2	The Weighted Synthetic Effect Measure	244
10.5	The Paradox of Rule of Maximum Value and Its Solution	248
10.5.1	The Weight Vector Group of Kernel Clustering	249
10.5.2	The Weighted Coefficient Vector of Kernel Clustering for Decision-Making	250
10.5.3	Several Functional Weight Vector Groups of Kernel Clustering	252
10.6	Practical Applications	253
<b>11</b>	<b>Grey Control Systems</b>	257
11.1	Introduction	257
11.2	Controllability and Observability of Grey System	258
11.3	Transfer Functions of Grey System	260
11.3.1	Grey Transfer Function	260
11.3.2	Transfer Functions of Typical Links	261
11.3.3	Matrices of Grey Transfer Functions	265
11.4	Robust Stability of Grey System	266
11.4.1	Robust Stability of Grey Linear Systems	266
11.4.2	Robust Stability of Grey Linear Time-Delay Systems	269
11.4.3	Robust Stability of Grey Stochastic Linear Time-Delay System	271
11.5	Typical Grey Controls	276
11.5.1	Control with Abandonment	276
11.5.2	Control of Grey Incidence	277
11.5.3	Control of Grey Prediction	278

**12 Introduction to Grey Systems Modeling Software . . . . . 285**

    12.1 Introduction . . . . . 285

    12.2 Software Features and Functions . . . . . 286

    12.3 Main Components. . . . . 288

    12.4 Operation Guide . . . . . 290

        12.4.1 The Confirmation System . . . . . 290

        12.4.2 Using the Software Package . . . . . 291

**Farewell to Our Tutor . . . . . 301**
