

Contents

1	Introduction	1
1.1	Underactuated Mechanical System	1
1.2	Brief State-of-the-Art on the UMSs Control	3
1.2.1	Linear Control Approaches	3
1.2.2	Nonlinear Control: Present Day Approaches	4
1.2.3	Block Backstepping Approach	6
1.3	Motivations of Designing an Advanced Control Law	7
1.4	Outline of the Book	10
2	Theoretical Preliminaries	11
2.1	Feedback Linearization	11
2.1.1	Input-State Feedback Linearization	11
2.1.2	Output Feedback Linearization	14
2.1.3	Partial Feedback Linearization	17
2.2	Control Lyapunov Function	21
2.3	Integrator Backstepping	23
2.4	Block Backstepping Design	28
2.5	Notes	30
	References	30
3	Block Backstepping Control of the Underactuated Mechanical Systems	31
3.1	Formulation of Generalized Block Backstepping Control Law for Underactuated Systems with Two Degrees of Freedom (2-DOF)	32
3.1.1	Problem Formulation	32
3.1.2	Derivation of the Control Algorithm for 2-DOF Underactuated Mechanical Systems	33
3.1.3	Zero Dynamics Analysis of 2-DOF Underactuated Mechanical System	37

3.2	Formulation of Generalized Block Backstepping Control Law for Underactuated Systems with N Degrees of Freedom.	39
3.2.1	Problem Formulation.	39
3.2.2	Derivation of the Control Law for n -DOF Underactuated Mechanical Systems	40
3.2.3	Zero Dynamics Analysis of n -DOF Underactuated Mechanical System	46
3.3	Analysis of Global Diffeomorphism of the Control Law	48
3.4	Stability Analysis of the Proposed Controller.	49
3.5	Notes	51
	References.	52
4	Applications of the Block Backstepping Algorithm on 2-DOF Underactuated Mechanical Systems: Some Case Studies	53
4.1	Application on the Inertia Wheel Pendulum	54
4.1.1	Derivation of the Control Law for Inertia Wheel Pendulum	55
4.1.2	Simulation Results and Performance Analysis.	58
4.2	Application on the TORA System	62
4.2.1	Derivation of the Control Law for TORA System	63
4.2.2	Simulation Results and Performance Analysis.	66
4.3	Application on the Furuta Pendulum	69
4.3.1	Derivation of the Control Law for Furuta Pendulum System	71
4.3.2	Simulation Results and Performance Analysis.	74
4.4	Application on the Acrobot System	77
4.4.1	Derivation of the Control Law for Acrobot System	78
4.4.2	Simulation Results and Performance Analysis.	81
4.5	Application on the Pendubot System	84
4.5.1	Derivation of the Control Law for Pendubot System	86
4.5.2	Simulation Results and Performance Analysis.	89
4.6	Application on the Inverted Pendulum	91
4.6.1	Derivation of the Control Law for Inverted Pendulum	93
4.6.2	Results Obtained from Real-Time Experiments.	96
4.7	Application on the Single Dimension Granty Crane.	99
4.7.1	Derivation of the Control Law for Granty Crane System	100
4.7.2	Results Obtained from Real-Time Experiments.	103
4.8	Notes	105
	References.	106

5 Applications of the Block Backstepping Algorithm on Underactuated Mechanical Systems with Higher Degrees of Freedom: Some Case Studies	109
5.1 Application on the VTOL	110
5.1.1 Derivation of the Control Law for VTOL	112
5.1.2 Simulation Results and Performance Analysis	117
5.2 Application on the USV	120
5.2.1 Derivation of the Control Law for USV	122
5.2.2 Simulation Results and Performance Analysis	127
5.3 Application on Three Degree of Freedom Redundant Manipulator	132
5.3.1 Derivation of the Control Law for 3-DOF Robotic Manipulator	133
5.3.2 Simulation Results and Performance Analysis	139
5.4 Notes	142
References	143
6 Challenges and New Frontiers in the Field of Underactuated Mechanical Systems Control	145
6.1 Different Aspects of the Proposed Control Law	145
6.2 Major Inferences	147
6.3 Scope of the Future Work	147
6.3.1 Robust Adaptive Block Backstepping Design for Underactuated Mechanical Systems	148
6.3.2 Industrial Needs	149
6.3.3 High-DOF Complex UMS	149
6.3.4 Fault Tolerant Deduction and Control	150
6.3.5 Networked UMS	150
6.4 Notes	150
References	151
Appendix: Modeling of Different Underactuated Mechanical Systems	155

Block Backstepping Design of Nonlinear State
Feedback Control Law for Underactuated Mechanical
Systems

Rudra, S.; Barai, R.K.; Maitra, M.

2017, XVII, 171 p. 84 illus., Hardcover
