

Contents

Optically Active Polymers: A Systematic Study on Syntheses and Properties	1
1 Introduction	1
2 Synthesis of Optically Active Polymers	2
2.1 Helical Polymer	2
2.2 Poly (ethyl L-lysiniimide)s	4
2.3 Poly (ethyl L-lysiniamide)s	4
2.4 Optically Active Poly(amide-imide)s	4
2.5 Poly(phenylacetylene)	9
2.6 Optically Active Dendronized Polymers	9
2.7 Optically Active Poly(ester-imide)s [33]	10
2.8 Optically Active Polyalkylthiophenes [34–37]	10
2.9 Synthesis of Optically Active Azoaromatic and Carbazole Containing Azoaromatic Polymers and Copolymers	14
2.10 Synthesis of Optically Active Benzodithiophene Based Poly(aryleneethynylene)s for Solar Cells [71]	21
2.11 Synthesis of Optically Active Porphyrin Derivatives Bearing Four Chiral Citronellal Moieties	25
2.12 Asymmetric Polymerizations of <i>N</i> -Substituted Maleimides Bearing L-Leucine Ester Derivatives	26
3 Characterization Techniques for Analyzing the Optical Activities of Polymers	29
4 Properties	31
4.1 Nonlinear Optical Properties of Azo-Polymers	31
4.2 Thermal Analysis	34
4.3 Chiroptical Properties	35
4.4 Vapochromic Behaviour	35
4.5 Absorption and Emission Properties	36
4.6 Thermosensitivity	37

4.7	Chiral Separation	37
4.8	Fabrication	37
4.9	Photochromic Property	38
5	Applications	38
6	Conclusions	39
	References	39

Optically Active Polymers

A Systematic Study on Syntheses and Properties

Dutta, P.K.; Kumar, V.

2017, XIX, 47 p. 12 illus., Softcover

ISBN: 978-981-10-2605-8
