1	World of Proteins: Structure-Function Relationships and Engineering Techniques	1
1.1	Introduction	1
1.2	Functional Characteristics of Proteins	2
1.3	Transfer of Genetic Information: From DNA to Proteins	3
1.4	Amino Acids, Building Blocks of Proteins	6
1.4.1	Non Polar Amino Acids	6
1.4.2	Charged Polar Amino Acids	6
1.4.3	Uncharged Polar Amino Acids	7
1.5	Hydrophobicity Profiles of Amino Acids	7
1.6	Acidic and Basic Properties of Amino Acids	7
1.7	Structural Organization of Proteins	7
1.7.1	Primary Structure	8
1.7.2	Secondary Structure	8
1.7.3	Tertiary Structure	11
1.7.4	Quaternary Structure	12
1.8	Motifs/Super Secondary Structures	13
1.9	Protein Stability	16
1.9.1	Ionic Interactions	16
1.9.2	Van der Waal Interactions	16
1.9.3	Hydrophobic Interactions	17
1.10	Protein Denaturation, Renaturation and Folding Energy Landscape	17
1.11	Structure Determination of Proteins	19
1.11.1	X-Ray Crystallography	20
1.11.2	Nuclear Magnetic Resonance Spectroscopy (NMR)	20
1.12	Concept of Biomolecular and Protein Engineering	21
	References	23

2 Expanding the Synthetic Protein Universe by Guided Evolutionary

Concepts	27
2.1 Directed Evolution	27
2.2 Asexual Methods	29
2.3 Random Mutagenesis	29
2.3.1 Error Prone PCR	30
2.3.2 Chemical Mutagenesis	31
2.3.3 Mutator Strains	31
2.3.4 Dual Approach to Random Chemical Mutagenesis (DuARChEM)	32
2.3.5 Rolling Circle Error-Prone PCR	32
2.3.6 Targeting Glycosylases to Embedded Arrays for Mutagenesis (TaGTEAM)	33
2.3.7 Mutagenesis by Random Insertion and Deletion	33
2.3.8 Transposon Based Random Mutagenesis	33
2.3.9 Random Mutagenesis Methods Altering the Target DNA Length	34
2.4 Focused Mutagenesis	34
2.5 Site Saturation Mutagenesis (SSM)	34
2.5.1 Cassette Mutagenesis	35
2.5.2 Sequence Saturation Mutagenesis (SeSAM)	36
2.5.3 Single-Primer Reactions in Parallel (SPRINP)	37
2.5.4 Megaprimered and Ligase-Free	37
2.5.5 Ω -PCR	37
2.5.6 PFunkel—Ominchange—OSCARR	38
2.5.7 Trimer-Dimer Mutagenesis	38
2.6 Sexual Methods	39
2.7 Homologous Recombination	40
2.8 In Vitro Homologous Recombination	40
2.8.1 DNA Shuffling	40
2.8.2 Random Priming In Vitro Recombination (RPR)	42
2.8.3 Truncated Metagenomic Gene-Specific PCR (TMGS-PCR)	42
2.8.4 Staggered Extension Process (StEP)	43
2.8.5 Random Chimeragenesis on Transient Templates (RACHITT)	43
2.8.6 Synthetic Shuffling	44
2.9 In Vivo Homologous Recombination	44
2.9.1 Cloning Performed in Yeast (CLERY)	44
2.9.2 Mutagenic Organized Recombination Process by Homologous In Vivo Grouping (MORPHING)	45
2.9.3 Phage Assisted Continuous Evolution (PACE)	45

2.10	In Vitro Non-homologous Recombination Methods	45
2.10.1	Exon Shuffling.	45
2.10.2	Incremental Truncation for the Creation of Hybrid Enzymes (ITCHY).	47
2.10.3	SCRATCHY	47
2.10.4	Recombined Extension on Truncated Templates (RETT).	48
2.10.5	Sequence Homology-Independent Protein Recombination (SHIPREC).	48
2.10.6	Sequence Independent Site-Directed Chimeragenesis (SISDC).	49
2.10.7	Degenerate Homo-Duplex Recombination (DHR).	49
2.10.8	Random Multi-recombinant PCR (RM-PCR).	50
2.10.9	User Friendly DNA Recombination (USERec).	50
2.10.10	Golden Gate Shuffling (GGS) Recombination	50
2.10.11	Phosphorothioate-Based DNA Recombination Method (PTRec)	51
2.10.12	Integron.	51
2.10.13	Y-Ligation Based Shuffling (YLBS)	52
2.11	Screening and Selection Techniques.	52
2.12	Proteins Designed Using Directed Evolution (DE) Methods.	53
	References.	54
3	Rational Designing of Novel Proteins Through Computational Approaches	61
3.1	Computational Designing of Proteins	61
3.2	Rational Designing of Proteins	62
3.3	Multiple Sequence Alignment (MSA).	63
3.3.1	Few Case Studies that Employed MSA Tools for Designing Proteins.	65
3.4	Coevolutionary Analysis.	66
3.5	Structure Based Designing of New Proteins	70
3.5.1	Ab Initio Methods	71
3.5.2	Fragment Based Methods	72
3.5.3	Homology Modeling	72
3.5.4	Protein Threading	74
	References.	77
4	Generating the Fancy Protein Basket with De Novo and Combinatorial Approaches	85
4.1	De Novo Designing of Proteins	85
4.1.1	Building Backbone	86
4.1.2	Sequence Design and Optimization	87
4.1.3	In Silico and Experimental Validation.	89

4.2	Negative Design Methods.	90
4.3	Examples of De Novo Designed Proteins.	90
4.4	Combinatorial/Semi-rational Approach for Protein Designing. . . .	91
4.5	Glimpse on Proteins Engineered by de Novo/Combinatorial Approaches.	96
	References.	97
5	Biotechnological and Biomedical Applications of Protein Engineering Methods	103
5.1	Diversified Applications of Protein Engineering Techniques	103
5.2	Industrial Applications	104
5.3	Environmental Applications	107
5.4	Biomaterial Applications.	108
5.4.1	Elastin like Polypeptides (ELPs)	109
5.4.2	Silk Motifs	110
5.4.3	Coiled-Coil Motifs.	110
5.4.4	Calmodulin Motifs.	111
5.4.5	β -Sheet Forming Ionic Oligopeptides	112
5.5	Applications in Nanotechnology.	112
5.6	Biosensors	113
5.7	Virus Engineering.	114
5.8	Biomedical Applications.	115
5.8.1	Engineered Proteins as Therapeutics	115
5.8.2	Protein Scaffolds as Therapeutics	121
