

Contents

1	Introduction	1
1.1	Requirement of Wind Turbine Gearbox	1
1.2	Dynamics of Gearbox	2
1.3	Structure Description of Gearbox in Wind Turbine	3
1.4	Modeling Methods for Dynamic and Vibration Analyses	4
1.5	Shaft Misalignment in Gearbox	5
1.6	Measurement and Analysis of Gearbox Vibration	6
1.7	Works in This Book	6
	References	7
2	Torsional Dynamics of Gear-Rotor System in Wind Turbine Gearbox	9
2.1	Lumped Mass Model for Torsional Dynamics	9
2.1.1	Mechanical Schematic	9
2.1.2	Definition of DOFs	10
2.1.3	Mesh Stiffness Excitation	11
2.1.4	Transmission Error Excitation	12
2.1.5	Mesh Damping in the Planetary Train	13
2.1.6	Governing Equations	14
2.2	Torsional Dynamics of the Gearbox	19
2.3	Load Factors of Gear-Rotor System in Gearbox	19
2.3.1	Analysis of System Excitation and Damping	19
2.3.2	Load Factors of Gear-Rotor System	25
2.4	Load-Sharing Coefficients Based on Torsional Dynamics	30
2.4.1	Calculation of Load-Sharing Coefficients	31
2.4.2	Load-Sharing Structure Design	32
2.4.3	Load-Sharing Performance Effected by the Errors	35
2.5	Experimental Test of Load Balances in Gearbox	39
	References	41

3	Parameter Optimization for Planetary Gear System Based on Torsional Dynamics	43
3.1	Design Variables and Objective Function.	43
3.2	The Constraint Function.	44
3.3	Parameter Optimization for High-Speed Transmission System with Parallel Axes	47
3.4	Distribution of Reliability.	48
3.5	Example and Analysis	48
	References.	51
4	Influence of Unbalance and Misalignment on Load-Sharing Coefficient of Gear-Rotor System Based on Torsional Dynamics	53
4.1	Modeling Method for Dynamic Analysis of Gear-Rotor System	53
4.1.1	Shaft Element	53
4.1.2	Lumped Mass Element	54
4.1.3	Bearing Element	55
4.1.4	Gear Meshing Element	56
4.1.5	Basic Principles and Dynamics Model	62
4.2	Load-Sharing Coefficient Analyses.	64
4.2.1	Load-Sharing Coefficient of Planetary Gear Trains.	64
4.2.2	Influence of Unbalance on Load-Sharing Coefficient	64
4.2.3	Influence of Misalignment on Load-Sharing Coefficient.	65
	References.	68
5	Modal Analyses Based on Whole Gearbox FE Model in Wind Turbine	71
5.1	FE Model of Transmission Chain System in Wind Turbine	71
5.2	Whole Gearbox FE Model (WG-FEM) of Wind Turbine.	72
5.3	Modal Analysis of the Gearbox	73
	References.	75
6	Vibration Measurements of Wind Turbine Gearbox	77
6.1	Bench Tests	77
6.2	Operating Modal Tests	79
6.3	Vibrations of On-site Tests.	83
6.4	Fault Diagnoses for Wind Turbine Gearbox Based on Vibration Measurements	85
	References.	90
7	Vibration Signal Analyses of Gearbox in Time-Domain, Frequency-Domain, and Time-Frequency Domain.	91
7.1	Structure Description and Measuring Method.	91
7.2	Vibration Measurements of Wind Turbine Gearbox	93

7.3	Analysis of Vibration Signals of Gearbox Based on Time Domain	93
7.4	Cross-Correlation Function Estimates of Vibration Signals.	95
7.5	Spectra Analysis of Vibration Signals of the Wind Turbine Gearbox	96
7.6	Phase Analysis of Vibration Signals of Wind Turbine Gearbox	101
7.6.1	Phase Analysis Based on Analytic Signal Theory with Hilbert Transform	101
7.6.2	Results of Phase Analysis of Vibration Signals of Wind Turbine Gearbox.	103
7.7	Hilbert–Huang Transform Analysis of Vibration Signals of Wind Turbine Gearbox	103
7.7.1	Basic Principle of Hilbert–Huang Transform Technique	106
7.7.2	HHT Analysis of Vibrations of Wind Turbine Gearbox	114
	References.	116
8	Conclusions	117
	Appendix A: Codes of Factor KA	119
	Appendix B: Codes of Time-frequency Analysis of Vibration Signals	157
	Appendix C: Codes of Hilbert-Huang Transform Analysis of Vibration Signals	159

Dynamics and Vibration Analyses of Gearbox in Wind
Turbine

Han, Q.; Wei, J.; Han, Q.; Zhang, H.

2017, XII, 164 p. 88 illus., 68 illus. in color., Hardcover
