

Contents

1	Overview of Solar Photovoltaic Technology	1
1.1	Solar Energy	1
1.2	Solar Photovoltaic Cells	2
1.3	Dye-sensitized Solar Cells	5
1.3.1	Efficiency	6
1.3.2	Stability	10
1.3.3	Cost	12
1.4	Flexible Solar Cells	13
1.4.1	Flexible Thin-Film Solar Cells	14
1.4.2	Flexible DSSCs	15
1.5	Fiber Solar Cells	17
1.5.1	Features of Fiber Solar Cells	17
1.5.2	Fiber Inorganic Solar Cells	20
1.5.3	Fiber Organic Solar Cells	20
1.5.4	Fiber Dye-sensitized Solar Cells	21
1.5.5	Comparison of Current Fiber Photovoltaic Technologies	22
1.6	Scope of This Thesis	24
	References	25
2	Film Deposition on a Wire/Fiber via In Situ Joule Heating Process	31
2.1	Setup of Joule Heating on-a-Wire Film-Depositing Systems	32
2.2	Optimization of TiO ₂ Mesoporous Film Deposition	33
2.2.1	Heating Current	33
2.2.2	Coating Times	34
2.2.3	Drawing Rate and Rotating Rate	35
2.2.4	TiO ₂ Colloids	35
2.2.5	Surface Modification	36

2.2.6	Reproducibility and Stability	37
2.3	Capability of Depositing Multifunctional Layers on a Fiber/Wire	38
2.4	Liquid-State Fiber DSSCs	39
2.5	Summary	40
	References	41
3	Fiber Solar Cells Utilizing Polymer Fibers	43
3.1	All-Polymer Fiber Electrodes	44
3.2	Effect of PEDOT:PSS Loading	45
3.3	Effect of Fiber Diameter	48
3.4	Effect of Fiber Length	49
3.5	Stability of Polymer Electrodes	49
3.6	Natural Polymer Fiber Substrate	51
3.7	Summary	51
	References	52
4	Carbon Fibers as Versatile Substrates for Fiber Solar Cells	53
4.1	Carbon Fibers	53
4.1.1	Carbon Fiber Electrodes	53
4.1.2	Liquid-State Fiber DSSCs	54
4.1.3	Parallel Configuration Versus Twisted Configuration	55
4.1.4	Effect of Diameter of Carbon Fiber Electrode	55
4.2	Platinized Carbon Fibers as Counter Electrodes	56
4.2.1	Morphology of Platinized Carbon Fibers	56
4.2.2	Electrocatalytic Activity	56
4.2.3	Photovoltaic Performance	57
4.2.4	Effect of Pt Loading	59
4.2.5	Effect of Diameter	60
4.2.6	Effect of Pitch	60
4.2.7	Stainless Steel Wire/Carbon Fiber Composite Electrode	61
4.2.8	Light Concentration	62
4.2.9	Electrochemical Deposition	63
4.2.10	Thermal Decomposition	64
4.3	Alternative Electrocatalysts: CNT and CoS	65
4.4	Alternative Electrocatalysts: PEDOT:PSS	65
4.4.1	Morphology of the CF/PEDOT Electrodes	66
4.4.2	Electrochemical Performance	66
4.4.3	Photovoltaic Performance	69
4.4.4	Optimization of the Amount of PEDOT and the Diameters of CF/PEDOT Electrodes	70

4.5	Insulating Separator	73
4.5.1	SiO ₂ Porous Coating on Fiber Counter Electrode	73
4.5.2	SiO ₂ Porous Coating on Fiber Working Electrodes.	73
4.6	Textile Solar Cells	75
4.7	Summary	75
	References.	76
5	Graphene Electrocatalysts for Fiber Dye-Sensitized Solar Cells	79
5.1	Graphene as Electrocatalysts.	80
5.2	Nitrogen-Doped Graphene as Electrocatalysts.	81
5.2.1	Preparation of Nitrogen-Doped Graphene	81
5.2.2	NrG as Efficient Electrocatalyst for DSSCs.	83
5.2.3	Nitrogen Content.	88
5.2.4	Electrochemical Active Area and Intrinsic Activity.	92
5.2.5	Edges and Defects.	94
5.2.6	Nitrogen-Doping States	95
5.2.7	Mechanism of Iodine Reduction Reaction on NrG	97
5.3	In Situ Electrochemical Deposition of Graphene on a Metal Fiber.	98
5.4	All-Carbon Fiber Counter Electrodes with Nitrogen-Doped Graphene on Carbon Fibers	100
5.5	Graphene/Metal Nitride Nanocomposites as Electrocatalysts.	100
5.6	Graphene Micro-Ribbons	101
5.7	Summary	102
	References.	103
6	Architectures and Working Principles of Fiber Solar Cells	107
6.1	Device Configuration	107
6.1.1	Parallel Configuration Versus Twisted Configuration	107
6.1.2	Point-Contact Configuration	109
6.2	Charge-Collecting Lengths	109
6.3	Coupling of Fiber Working Electrode and Counter Electrode	110
6.4	Optical Structure.	112
6.5	Summary	112
7	Conclusion	113

Fiber Solar Cells

Materials, Processing and Devices

Hou, S.

2017, XI, 114 p. 76 illus., 53 illus. in color., Hardcover
