

# Contents

## Part I Preliminaries

<b>1</b>	<b>Complex Numbers</b>	3
1.1	Quotients of Complex Numbers	7
1.2	Roots of Complex Numbers	8
1.3	Sequences and Euler's Constant	9
1.4	Power Series and Radius of Convergence	13
1.5	Minkowski Spacetime	17
1.5.1	Rindler Observers	20
1.6	The Logarithm and Winding Number	24
1.7	Branch Cuts for $\log Z$	25
1.8	Branch Cuts for $z^{\frac{1}{p}}$	27
1.9	Exercises	29
	Reference	33
<b>2</b>	<b>Complex Function Theory</b>	35
2.1	Analytic Functions	35
2.2	Cauchy's Integral Formula	38
2.3	Evaluation of a Real Integral	42
2.4	Residue Theorem	43
2.5	Morera's Theorem	48
2.6	Liouville's Theorem	50
2.7	Poisson Kernel	51
2.8	Flux and Circulation	52
2.9	Examples of Potential Flows	55
2.10	Exercises	56
	References	60

<b>3</b>	<b>Vectors and Linear Algebra</b>	61
3.1	Introduction	61
3.2	Inner and Outer Products	63
3.3	Angular Momentum Vector	63
3.3.1	Rotations	64
3.3.2	Angular Momentum and Mach's Principle	65
3.3.3	Energy and Torque	66
3.3.4	Coriolis Forces	70
3.3.5	Spinning Top	71
3.4	Elementary Transformations in the Plane	74
3.4.1	Reflection Matrix	74
3.4.2	Rotation Matrix	76
3.5	Matrix Algebra	77
3.6	Eigenvalue Problems	78
3.6.1	Eigenvalues of $R(\varphi)$	78
3.6.2	Eigenvalues of a Real-Symmetric Matrix	79
3.6.3	Hermitian Matrices	80
3.7	Unitary Matrices and Invariants	83
3.8	Hermitian Structure of Minkowski Spacetime	86
3.9	Eigenvectors of Hermitian Matrices	91
3.10	QR Factorization	94
3.10.1	Examples of Image and Null Space	96
3.10.2	Dimensions of Image and Null Space	97
3.10.3	QR Factorization by Gram-Schmidt	100
3.11	Exercises	101
	References	107
<b>4</b>	<b>Linear Partial Differential Equations</b>	109
4.1	Hyperbolic Equations	109
4.1.1	Inhomogeneous Wave Equation (Duhamel)	113
4.2	Diffusion Equation	115
4.2.1	Photon Diffusion in the Sun	121
4.3	Elliptic Equations	122
4.4	Characteristics of Hyperbolic Systems	125
4.5	Weyl Equation	126
4.6	Exercises	129
	References	131
<b>Part II Methods of Approximation</b>		
<b>5</b>	<b>Projections and Minimal Distances</b>	135
5.1	Vectors and Distances	135
5.2	Projections of Vectors	137
5.3	Snell's Law and Fermat's Principle	142

5.4	Fitting Data by Least Squares . . . . .	148
5.5	Gauss-Legendre Quadrature . . . . .	151
5.6	Exercises . . . . .	154
	References . . . . .	158
<b>6</b>	<b>Spectral Methods and Signal Analysis.</b> . . . .	<b>159</b>
6.1	Basis Functions . . . . .	159
6.2	Expansion in Legendre Polynomials . . . . .	160
6.2.1	Symbolic Computation in <i>Maxima</i> . . . . .	163
6.3	Fourier Expansion . . . . .	167
6.4	The Fourier Transform . . . . .	167
6.4.1	The Sinc Function. . . . .	169
6.4.2	Plancherel's Theorem . . . . .	170
6.4.3	Fourier Series by Sampling $\tilde{f}(\omega)$ . . . . .	171
6.4.4	Discrete Fourier Transform (DFT) . . . . .	174
6.5	Fourier Series. . . . .	176
6.6	Chebyshev Polynomials . . . . .	177
6.7	Weierstrass Approximation Theorem . . . . .	179
6.8	Detector Signals in the Presence of Noise . . . . .	180
6.8.1	Convolution and Cross-Correlation. . . . .	181
6.9	Signal Detection by FFT Using <i>Maxima</i> . . . . .	183
6.10	GPU-Butterfly Filter in $(f, \dot{f})$ . . . . .	185
6.11	Exercises . . . . .	190
	References . . . . .	196
<b>7</b>	<b>Root Finding</b> . . . . .	<b>197</b>
7.1	Solving for $\sqrt{2}$ and $\pi$ . . . . .	197
7.2	Convergence in Newton's Method . . . . .	200
7.3	Contraction Mapping . . . . .	201
7.4	Newton's Method in Two Dimensions. . . . .	204
7.5	Basins of Attraction . . . . .	206
7.6	Root Finding in Higher Dimensions. . . . .	208
7.7	Exercises . . . . .	210
	References . . . . .	211
<b>8</b>	<b>Finite Differencing: Differentiation and Integration</b> . . . . .	<b>213</b>
8.1	Vector Fields . . . . .	213
8.1.1	Estimating Velocity. . . . .	215
8.1.2	Estimating Acceleration . . . . .	219
8.2	Gradient Operator. . . . .	220
8.3	Integration by Finite Summation . . . . .	221
8.4	Numerical Integration of ODE's. . . . .	223

8.5	Examples of Ordinary Differential Equations . . . . .	225
8.5.1	Osmosis . . . . .	225
8.5.2	Migration Time of the Moon . . . . .	226
8.5.3	Cosmological Expansion . . . . .	232
8.6	Exercises . . . . .	236
	References . . . . .	241
<b>9</b>	<b>Perturbation Theory, Scaling and Turbulence . . . . .</b>	<b>243</b>
9.1	Roots of a Cubic Equation . . . . .	243
9.2	Damped Pendulum . . . . .	245
9.3	Orbital Motion . . . . .	247
9.3.1	Perihelion Precession . . . . .	249
9.4	Inertial and Viscous Fluid Motion . . . . .	252
9.4.1	Large and Small Reynolds Numbers . . . . .	255
9.4.2	Vorticity Equation . . . . .	258
9.4.3	Jeans Instability in Linearized Euler's Equations . . . . .	259
9.5	Kolmogorov Scaling of Homogeneous Turbulence . . . . .	263
9.6	Exercises . . . . .	266
	References . . . . .	269
 <b>Part III Selected Topics</b>		
<b>10</b>	<b>Thermodynamics of N-body Systems . . . . .</b>	<b>273</b>
10.1	The Action Principle . . . . .	273
10.2	Momentum in Euler-Lagrange Equations . . . . .	275
10.3	Legendre Transformation . . . . .	276
10.4	Hamiltonian Formulation . . . . .	277
10.5	Globular Clusters . . . . .	278
10.6	Coefficients of Relaxation . . . . .	285
10.7	Exercises . . . . .	287
	References . . . . .	288
<b>11</b>	<b>Accretion Flows onto Black Holes . . . . .</b>	<b>291</b>
11.1	Bondi Accretion . . . . .	293
11.2	Hoyle-Lyttleton Accretion . . . . .	298
11.3	Accretion Disks . . . . .	301
11.4	Gravitational Wave Emission . . . . .	304
11.5	Mass Transfer in Binaries . . . . .	307
11.6	Exercises . . . . .	312
	References . . . . .	314

**12 Rindler Observers in Astrophysics and Cosmology . . . . . 317**

    12.1 The Moving Mirror Problem . . . . . 317

    12.2 Implications for Dark Matter . . . . . 319

    12.3 Exercises . . . . . 323

    References . . . . . 324

**Appendix A: Some Units and Constants. . . . . 325**

**Appendix B:  $\Gamma(z)$  and  $\zeta(z)$  Functions . . . . . 327**

**Appendix C: Free Fall in Schwarzschild Spacetime. . . . . 329**

**Index . . . . . 339**

Introduction to Methods of Approximation in Physics  
and Astronomy

van Putten, M.H.P.M.

2017, XIII, 345 p. 90 illus., 71 illus. in color., Hardcover
