

Contents

- 1 Introduction** 1
 - 1.1 Field Description 1
 - 1.2 State of the Art 2
 - 1.3 Outline of the Book 2
 - References 3
- 2 Signal Model for Synthetic Aperture Radar Images** 5
 - 2.1 SAR Acquisition Geometry 5
 - 2.2 Azimuth Time–Frequency Representation 6
 - 2.3 Time-Domain SAR Image Formation 8
 - 2.4 Differential (4D) SAR Tomography Framework 10
 - References 11
- 3 Scattering Centers Monitoring in SAR Images** 13
 - 3.1 Overview 13
 - 3.2 Azimuth Defocusing and Point Cloud Focusing 16
 - 3.3 Detection and Tracking of Scattering Centers 21
 - 3.4 Simulation Results 22
 - 3.4.1 Radar Geometry to Ground Geometry 22
 - 3.4.2 Refocusing Approach Versus Grid Interpolation 24
 - 3.4.3 Scattering Centers Detection and Tracking Results. 24
 - 3.4.4 Position Test Versus Classical Scatterers Identification ... 31
 - 3.5 Conclusions 36
 - References 37
- 4 Case Study: Puylaurent Water Dam and Chastel Landslide** 41
 - 4.1 Test Site and Data Description. 41
 - 4.1.1 SAR Data 41
 - 4.1.2 Point Clouds Generation. 43
 - 4.1.3 In situ Measurements Devices 49
 - 4.2 SAR Data and Point Cloud Processing 50

4.3	Deformation Measurements	58
4.3.1	Chastel Landslide	58
4.3.2	Puylaurent Dam	64
4.4	Conclusions	68
	References	68
5	Summary	69
5.1	Overview	69
5.2	Recommendations for Infrastructure Monitoring with Spaceborne SAR Sensors	70
5.2.1	General SAR Images Selection Criteria for InSAR Applications	71
5.2.2	Recommendations for the Co-registration of SAR Images	72
5.2.3	Recommendations for Displacements Estimation	75
5.2.4	Point Cloud Requirements for Detection and Tracking of Scattering Centers	76
5.3	Future Developments	78
	References	79

Infrastructure Monitoring with Spaceborne SAR Sensors

ANGHEL, A.; VASILE, G.; CACOVEANU, R.

2017, XII, 79 p. 41 illus., 37 illus. in color., Softcover
