Preface

We are privileged to have several students contributing toward the shaping of this book, especially two of our best master students, Mr. Meng Li and Mr. Lacey Gareth James. Specifically, Meng offered us great help when we organized the materials to the data aggregation schemes in wireless sensor networks, while Lacey made a particular effort to help us check the privacy-preserving schemes in smart grid.

Although we made an earnest endeavor for this book, there may still be errors in the book. We would highly appreciate if you contact us when you find any. The corresponding email address is liehuangz@bit.edu.cn.
