<b>1 Variational Multi-phase Continuum Theories of Poroelasticity:</b>	
<b>A Short Retrospective</b> . . . . .	1
1.1 Introduction . . . . .	1
1.2 Variational Theories from the 70s to the 80s . . . . .	5
1.2.1 Cowin’s Theory . . . . .	6
1.2.2 Mindlin’s Variational Single-Phase Theory . . . . .	6
1.2.3 The Variational Theory of Immiscible and Structured Mixtures by Bedford and Drumheller . . . . .	7
1.3 Most Recent Theories . . . . .	9
1.3.1 Variational Theories by Lopatnikov and Co-workers . . . . .	9
1.3.2 Variational Higher Gradient Theories by dell’Isola and Co-workers . . . . .	9
1.4 Conclusions . . . . .	11
References . . . . .	12
<b>2 Variational Macroscopic Two-Phase Poroelasticity.</b>	
<b>Derivation of General Medium-Independent Equations and Stress Partitioning Laws</b> . . . . .	17
2.1 Introduction . . . . .	17
2.2 Variational Formulation . . . . .	21
2.2.1 Basic Configuration Descriptors . . . . .	22
2.2.2 Variational Formulation . . . . .	33
2.2.3 Integral Equations . . . . .	43
2.2.4 Strong Form Equations . . . . .	47
2.2.5 Additional Solid-Fluid Interaction . . . . .	54
2.2.6 The Kinematically-Linear Medium-Independent Problem . . . . .	57
2.2.7 Equations for Static and Quasi-static Problems . . . . .	60
2.3 Discussion and Conclusions . . . . .	67
References . . . . .	70

<b>3</b>	<b>The Linear Isotropic Variational Theory and the Recovery of Biot's Equations</b> . . . . .	75
3.1	Introduction . . . . .	75
3.2	Two-Phase Medium-Independent Variational Equations for Infinitesimal Perturbations. . . . .	77
3.3	Linear Elastic Isotropic Constitutive Theory with Volumetric-Deviatoric Uncoupling . . . . .	81
3.4	Governing PDEs for the Isotropic Linear Problem . . . . .	85
3.4.1	$\bar{u}^{(s)}$ - $\bar{u}^{(f)}$ Hyperbolic PDEs with Inertial Terms. . . . .	85
3.4.2	Analysis of Wave Propagation . . . . .	86
3.4.3	PDE for Static and Quasi-static Interaction . . . . .	91
3.5	Bounds and Estimates of Elastic Moduli . . . . .	94
3.5.1	Basic Application of CSA. . . . .	96
3.5.2	Application of CSA to the Extrinsic/Intrinsic Description . . . . .	99
3.6	The Limit of Vanishing Porosity . . . . .	105
3.7	Comparison with Biot's Theory and Concluding Remarks. . . . .	110
	References. . . . .	113
<b>4</b>	<b>Stress Partitioning in Two-Phase Media: Experiments and Remarks on Terzaghi's Principle</b> . . . . .	115
4.1	Introduction . . . . .	116
4.2	Boundary Conditions with Unilateral Contact. . . . .	123
4.3	Kinematic and Static Characterization of Undrained Flow Conditions . . . . .	125
4.3.1	Static Characterization of Undrained Flow . . . . .	126
4.4	Stress Partitioning in Ideal Compression Tests . . . . .	133
4.4.1	Ideal Jacketed Drained Test . . . . .	138
4.4.2	Ideal Unjacketed Test . . . . .	140
4.4.3	Ideal Jacketed Undrained Test. . . . .	144
4.4.4	Creep Test with Controlled Pressure. . . . .	148
4.5	Analysis of Nur and Byerlee Experiments . . . . .	151
4.5.1	Determination of $\bar{e}^{(s)}$ . . . . .	154
4.5.2	Estimates of $\hat{e}^{(s)}$ . . . . .	154
4.6	Domain of Validity of Terzaghi's Principle According to VMTPM. . . . .	156
4.6.1	Recovery of Terzaghi's Law for Cohesionless Frictional Granular Materials. . . . .	157
4.6.2	Extensibility of Terzaghi's Effective Stress and Terzaghi's Principle Beyond Cohesionless Granular Materials. . . . .	159
4.7	Discussions and Conclusions . . . . .	161
