

Contents

1	Introduction	1
1.1	Surface Modeling	1
1.2	Concept of Subdivision Surfaces	3
1.3	Development of Subdivision Surfaces	5
1.4	Idea of This Book	11
	Remarks	12
	Exercises	13
2	Splines and Subdivision	15
2.1	B-Splines	15
2.2	B-Spline Curves and Surfaces	19
2.2.1	B-Spline Curves and Their Properties	19
2.2.2	B-Spline Surfaces and Their Properties	24
2.3	Knot Insertion Algorithm and Refinement of B-Spline Curves and Surfaces	25
2.3.1	Subdivision of B-Spline Curves	26
2.3.2	Subdivision of B-Spline Surface	30
2.4	Uniform Subdivision of B-Spline Curves and Surfaces	35
2.4.1	Subdivision of Uniform B-Spline Curves	35
2.4.2	Subdivision of Uniform B-Spline Surfaces	40
2.5	Box Spline	43
2.5.1	Vector Group and Support Mesh	44
2.5.2	Inductive Definition of Box Splines	45
2.5.3	Basic Properties of Box Splines	49
2.6	Box Spline Surfaces	50
2.6.1	Definition and Properties	50
2.6.2	Subdivision of Box Spline Surfaces	51
2.6.3	Generating Function of Box Spline	52
2.7	Subdivision Mask of Box Spline Surface	55
	Remarks	62
	Exercises	63

3	Meshes and Subdivision	65
3.1	Topological Structure of Meshes for Subdivision	65
3.2	Regular Mesh	68
3.3	Subdivision Scheme	69
3.4	Quadrilateral Subdivision	72
3.4.1	Doo–Sabin Subdivision	72
3.4.2	Catmull–Clark Subdivision	73
3.4.3	Non-uniform Subdivision	75
3.5	Triangular Subdivision	79
3.5.1	Loop Subdivision	79
3.5.2	Butterfly Subdivision	82
3.5.3	$\sqrt{3}$ Subdivision	82
3.6	Hexagonal Subdivision	85
3.6.1	Convexity-Preserving Subdivision Scheme	86
3.6.2	Honeycomb Subdivision Scheme	88
3.7	4–8 Subdivision	89
3.7.1	4–8 Meshes	89
3.7.2	Subdivision Rules	91
3.8	Classification of Subdivision Schemes	93
	Remarks	95
	Exercises	96
4	Analysis of Subdivision Surface	97
4.1	Subdivision Matrix	97
4.2	Discrete Fourier Transform	100
4.2.1	Fundament of DFT	100
4.2.2	Discrete Fourier Transform	100
4.2.3	Eigenvalues and Eigenvectors from DFT	102
4.3	Eigenvalues Analysis	103
4.3.1	Calculation of Eigenvalues and Eigenvectors	103
4.3.2	Property of the Limit Surface	106
4.3.3	Another Example for Eigenvalues Analysis	108
4.4	Characteristic Mapping	110
4.4.1	Annular Surface and Its Gradualness	110
4.4.2	Definition of Characteristic Mapping	112
4.4.3	Characteristic Mapping and Continuity of Subdivision Surfaces	114
4.5	Parameter Evaluation	118
4.5.1	Notations and Assumpsits	118
4.5.2	Mathematical Setting	120
4.5.3	Eigenstructure of Subdivision Matrix	123
4.5.4	Eigenbases and Evaluation for Non-regular Patches	124
4.5.5	Subdivision Matrix and Their Eigenstructures	126
4.5.6	Eigenbasis Functions	131
4.5.7	Parameter Evaluation and Characteristic Mapping	132

Remarks	133
Exercises.	134
5 n-Sided Patches and Subdivision Surfaces.	135
5.1 Methods for Constructing n -Sided Patches	135
5.2 C-C Subdivision Surfaces and G^2 Continuity	136
5.3 n -Sided Patches and Catmull–Clark Subdivision.	138
5.3.1 Contribution of Our Method	138
5.3.2 General Steps to Construct n -Sided Patches with Manifold Method.	138
5.3.3 Construction of Control Meshes of Manifold Patches	140
5.3.4 Parameter Region, Normalization Mapping, and Basic Function	140
5.3.5 Related Vertex and Normalized Basic Functions.	143
5.3.6 Properties of the Patch S	145
5.3.7 Extracting Submeshes from C-C Subdivision Meshes	150
5.3.8 Examples.	151
5.4 Subdivision Modeling, n -Sided Patches and B-Spline Boundaries	152
5.5 Construct n -Sided Patches by Using Non-uniform C-C Subdivision Scheme and Skirt-Removed Approach	154
5.5.1 Skirt-Removed Approach	154
5.5.2 Construct n -Sided Patches by Using Non-uniform C-C Subdivision Scheme and Skirt-Removed Approach.	154
5.6 Non-uniform C-C Subdivision Surface Interpolating Corner Vertices of Control Meshes	159
5.7 Some Examples to Construct Patches by Using the Non-uniform C-C Subdivision Scheme.	165
Remarks	165
Exercises.	166
6 Energy Optimization Method and Subdivision Surfaces	167
6.1 Blending Uniform Bi-Cubic B-Spline Surfaces.	167
6.1.1 Subdivision Surface Blending of B-Spline Patches	167
6.1.2 Optimization Model Based on Physical Energy.	169
6.1.3 Compute Control Vertices of Subdivision Patches.	170
6.1.4 Preliminary Discussion on Selecting New Vertices by Energy Optimization Method.	172
6.1.5 Select New Vertices by Energy Optimization Method	174
6.1.6 Determine Some New Vertices	175
6.1.7 Simplify Optimization Model	176
6.1.8 Examples.	178

6.2	Interpolations Using Subdivision Surfaces	179
6.2.1	Subdivision Surface and Interpolation	179
6.2.2	Direct Interpolation Method.	180
6.2.3	Interpolation Method with Fairness	183
6.2.4	SOR Iteration Method to Solve Linear Systems	184
6.2.5	Compute Boundary Vertices	185
6.2.6	Evaluating Energy Norms for Meshes.	186
6.2.7	Examples.	191
	Remarks	194
	Exercises.	195
7	Interactive Shape Editing for Subdivision Surfaces	197
7.1	Adjustment of Subdivision Meshes Under Simple Geometrical Constraints	197
7.1.1	Deformation under Simple Geometrical Constrains	198
7.1.2	Mapping the Relationship of Constraint Points Between Successive Subdivision Levels	199
7.1.3	The Deformation Algorithm	201
7.2	Editing of Subdivision Level Meshes Using Potential Functions	203
7.2.1	Mesh-Constrained Deformations Under Potential Functions.	204
7.2.2	Updating of the Potential Function	206
7.3	Modification of the Limit Surface Shape Under Geometrical Constraints	208
7.3.1	Definition of Local Geometrical Information for Subdivision Surfaces	208
7.3.2	Subdivision Surface Shape Modification Based on the Least-Squares Method	211
7.3.3	Subdivision Surface Shape Modification with an Energy Optimization Method.	213
7.3.4	Examples and Analysis	214
	Remarks	214
	Exercises.	216
8	Intersection and Trimming of Subdivision Surfaces	217
8.1	Related Work	217
8.2	Initial Discrete Intersection of Subdivision Surfaces.	218
8.2.1	Basic Idea of Discrete Intersection	218
8.2.2	Intersection Test Between Quad Meshes	219
8.2.3	Subdivision of the Intersected Mesh Belt	221
8.2.4	Error Control for Approximate Intersection.	222
8.2.5	Construction of Intersection Lines.	223
8.3	Calculating High Precision Solutions with an Iterative Method.	225

8.4	Trimming Algorithm for Subdivision Surfaces	227
8.4.1	Determination of a Valid Parameter Domain for Trimmed Subdivision Surfaces	227
8.4.2	Display of Trimmed Subdivision Surfaces.	228
8.5	Examples	229
	Remarks	230
	Exercises.	231
9	Subdivision Surfaces and Curve Networks	233
9.1	Construction of a Curve Network.	233
9.1.1	Basic Concepts	233
9.1.2	Construction of a Curve Network	236
9.2	A Combined Subdivision Scheme and Its Improvement.	237
9.2.1	Basic Principles.	237
9.2.2	Control Meshes of Combined Subdivision Surfaces	238
9.2.3	Basic Operators	239
9.2.4	Non-uniform Combined Subdivision Schemes.	241
9.3	The Construction of a Curve Network Interpolation Surface	244
9.3.1	Steps for Constructing an Interpolated Surface	244
9.3.2	Extension of the Combined Subdivision	245
9.3.3	Generation of the Initial Mesh.	246
9.4	Shape Modification Based on Curve Network Editing	247
9.4.1	Overlapping Subdivision Method for a Catmull–Clark Subdivision Surface.	247
9.4.2	Overlapping Subdivision Method for Combined Subdivision Surfaces	248
9.4.3	Local Updating of the Combined Subdivision Surface.	250
9.5	Shape Fairing of a Combined Subdivision Surface Based On Discrete PDE	251
9.5.1	Basic Principle.	252
9.5.2	A Discrete PDE Fairing Method	252
9.5.3	Basic Steps	256
9.5.4	Example	257
	Remarks	257
	Exercises.	258
10	Fitting Unstructured Triangle Meshes Using Subdivision Surfaces	259
10.1	A Simplified Shrink-Wrapping Approach for Remeshing	259
10.1.1	Introduction to the Shrink-Wrapping Approach.	259
10.1.2	Construction of Base Meshes	260
10.1.3	Converting a Triangle Mesh to a Quadrilateral Mesh.	261
10.1.4	Adjusting the Positions of the Vertices of Subdivided Meshes	262

10.1.5	Choosing Subdivision Schemes	264
10.1.6	Error Estimation	266
10.2	Surface Fitting by SLP (Subdivision Limit Position)	267
10.2.1	The Error Function and Its Minimization	267
10.2.2	The Base Mesh and Subdivision	268
10.3	Subdivision Surface Fitting with a Squared Distance Minimization Method	269
10.3.1	Construction of the Initial Control Mesh	269
10.3.2	Parameterization of Mesh Vertices	270
10.3.3	Subdivision Surface Fitting Using a Squared Distance Method	271
	Remarks	274
	Exercises	275
11	Poisson Mesh Editing Guided by Subdivision Surface	277
11.1	Traditional Mesh Editing Method	277
11.2	Poisson Mesh Editing	278
11.3	Poisson Mesh Editing Based on Subdivision Surfaces	280
11.3.1	Construction of the Model Bounding Mesh	281
11.3.2	Relationship Between the Mesh Model and Subdivision Surfaces	281
11.3.3	Boundary Conditions of Poisson Equations and Mesh Local Transformation	283
11.3.4	Realization of Poisson Reconstruction Deformation	285
11.3.5	Multiresolution Deformation	286
11.3.6	Deformation Instance Analysis	287
11.4	Mesh Deformation Based on Surface Control	287
11.4.1	Determination of the Deformation Region	289
11.4.2	Refinement of the Deformation Region	289
11.4.3	Design of Subdivision Control Surfaces	290
11.4.4	The Construction of Relationship Between The Deformation Mesh and the Subdivision Control Surface	291
11.4.5	Design of the Control Curve	291
11.4.6	Local Transformation of the Triangle in The Deformation Region	292
11.4.7	Realization of the Poisson Reconstruction Deformation	293
11.4.8	Deformation Instances	293
	Remarks	295
	Exercises	295
	References	297
