

Contents

1	General Summability Theory and Steinhaus Type Theorems	1
1.1	Basic Definitions and Concepts	1
1.2	The Silverman–Toeplitz Theorem, Schur’s Theorem, and Steinhaus Theorem.	3
1.3	A Steinhaus Type Theorem	13
1.4	The Role Played by the Sequence Spaces Λ_r .	16
1.5	More Steinhaus Type Theorems	19
	References.	25
2	Core of a Sequence and the Matrix Class (ℓ, ℓ)	27
2.1	Core of a Sequence	27
2.2	Natarajan’s Theorem and Knopp’s Core Theorem	28
2.3	Some Results for the Matrix Class (ℓ, ℓ)	31
2.4	A Mercerian Theorem.	35
	References.	36
3	Special Summability Methods.	37
3.1	Weighted Mean Method	37
3.2	(M, λ_n) Method or Natarajan Method.	48
3.3	The Abel Method and the (M, λ_n) Method.	54
3.4	The Euler Method and the (M, λ_n) Method	55
	References.	61
4	More Properties of the (M, λ_n) Method and Cauchy Multiplication of Certain Summable Series	63
4.1	Some Nice Properties of the (M, λ_n) Method.	63
4.2	Iteration of (M, λ_n) Methods	69
4.3	Cauchy Multiplication of (M, λ_n) -Summable Series	73
4.4	Cauchy Multiplication of Euler Summable Series.	77
	References.	82

5	The Silverman–Toeplitz, Schur, and Steinhaus Theorems for Four-Dimensional Infinite Matrices	83
5.1	A New Definition of Convergence of a Double Sequence and a Double Series	83
5.2	The Silverman–Toeplitz Theorem for Four-Dimensional Infinite Matrices	85
5.3	The Schur and Steinhaus Theorems for Four-Dimensional Infinite Matrices	94
	References.	100
6	The Nörlund, Weighted Mean, and $(M, \lambda_{m,n})$ Methods for Double Sequences	101
6.1	Nörlund Method for Double Sequences	101
6.2	Weighted Mean Method for Double Sequences	107
6.3	$(M, \lambda_{m,n})$ or Natarajan Method for Double Sequences	120
	References.	128
	Index	129
