Contents

1 Advances Is Mesenchymal Stem Cell Application for Cardiovascular Disease Treatment 1
1.1 Genetically Modified Mesenchymal Stem Cells 1
1.1.1 Genetically Modified MSCs with Improved Survival and Engraftment After Transplantation 2
1.1.2 Genetically Modified MSCs with Enhanced Cardioprotective Function 6
1.1.3 Genetically Modified MSCs Exhibiting Improved Transplantation Potential and Cardioprotective Function 7
1.1.4 Future Directions 9
1.2 Pharmacologically Optimized Mesenchymal Stem Cells 9
1.2.1 Mesenchymal Stem Cells Optimized via Pharmacological Agent Pretreatment 11
1.2.2 Mesenchymal Stem Cells Optimized via Cytokine and/or Growth Factor Pretreatment 14
1.2.3 Future Directions 17
1.3 Preconditioned Media 17
1.3.1 Hypoxia 17
1.3.2 Mechanical Stretching 18
1.4 Application of Injectable Hydrogels for Cardiovascular Disease Treatment 20
1.4.1 Biomaterial Library 21
1.4.2 Cellular Injectable Biomaterials 21
1.4.3 Synthetic Biomaterials 24
1.4.4 Acellular Injectable Biomaterials 25
References 30

2 Nanorobotic Agents and Their Biomedical Applications 37
2.1 Nanomedicine and Nanorobotics 37
2.2 Bio-nanorobotics. 38
2.3 Nanorobotic Agents in Biomedical Applications 38
2.4 Biomolecular Machines and Bio-nanorobots. 39
2.5 AFM Based Nanorobotic Systems 53
References. 60
