

Contents

1	Introduction	1
1.1	Global Energy Development	1
1.2	Hydrogen Energy	3
1.3	Hydrogen Production	4
1.3.1	Steam Reforming	5
1.3.2	Electrolysis	5
1.3.3	Thermal Chemical	6
1.3.4	Biological	6
1.4	Overview of This Book	15
	References	16
2	Microbiology and Enzymology	19
2.1	Microorganisms in Hydrogen-Producing System	19
2.1.1	Overview	19
2.1.2	Microbial Diversity in Hydrogen-Producing System	20
2.2	Inocula for Dark Fermentation	20
2.2.1	Mixed Culture	21
2.2.2	Pure Culture	22
2.3	Pure Culture for Hydrogen Production	25
2.3.1	<i>Clostridium butyricum</i> INET1	25
2.3.2	<i>Enterococcus faecium</i> INET2	34
2.4	Biochemistry of Hydrogen Production	46
2.4.1	Metabolic Pathways	46
2.4.2	Fermentation Types	48
2.5	Enzymology of Hydrogen Production	49
2.5.1	Classification of Hydrogenase	50
2.5.2	Genetic Modification of Hydrogenase	54
2.5.3	Environmental Applications of Hydrogenase	55
2.6	Microbial Modification	56
2.6.1	Co-cultivation	56

2.6.2	Microbial Immobilization	58
2.6.3	Metabolic Engineering	59
	References	61
3	Enrichment of Hydrogen-Producing Microorganisms	69
3.1	Overview	69
3.2	Heat Treatment	70
3.3	Acid/Alkaline Treatment	74
3.4	Chemical Inhibitors	76
3.5	Aeration	76
3.6	Other Treatments	78
3.6.1	Ultrasonication	78
3.6.2	Freezing and Thawing	80
3.6.3	Electric Treatment	81
3.6.4	Microwave Treatment	83
3.6.5	Ionizing Radiation Treatment	85
3.6.6	Ultraviolet (UV) Radiation	86
3.6.7	Load-Shock Treatment	86
3.6.8	Operational Condition Control	86
3.7	Combined Treatments	87
3.8	Effect of Pretreatment Methods on Microbial Community	89
3.9	Comparison of Different Pretreatment Methods	91
3.10	Gamma Irradiation for Enriching Hydrogen-Producer	93
3.10.1	Overview	93
3.10.2	Effect of Dose on Hydrogen Production	94
3.10.3	Effect of Dose on Substrate Degradation and Hydrogen Yield	96
3.10.4	Effect of Dose On Volatile Fatty Acids	97
3.10.5	Conclusions	99
3.11	Hydrogen Production Performance by Different Pretreated Sludge	100
3.11.1	Effect on Hydrogen Production	100
3.11.2	Effect on Substrate Degradation and Hydrogen Yield	102
3.11.3	Effect on Volatile Fatty Acids and Final pH	104
3.12	Changes in Microbial Community During Biohydrogen Production	107
3.12.1	Seed Sludge and Fermentation Conditions	107
3.12.2	DNA Extraction and PCR Amplification	107
3.12.3	MiSeq Sequencing and Data Analysis	107
3.12.4	Hydrogen Production Progress	108
3.12.5	Microbial Diversity Characteristics	109
3.12.6	Microbial Diversity at Different Stages	111
	References	113

4	Pretreatment of Organic Wastes for Hydrogen Production	123
4.1	Overview	123
4.2	Main Structural Components of Organic Wastes	124
4.3	Types and Compositions of Organic Wastes	124
4.3.1	Waste Activated Sludge	127
4.3.2	Algal Biomass	128
4.3.3	Cellulose-Based Biomass	131
4.3.4	Starch-Based Biomass	134
4.3.5	Food Waste	134
4.3.6	Wastewater	136
4.4	Pretreatment of Organic Wastes	138
4.4.1	Physical Treatment	138
4.4.2	Chemical Treatment	145
4.4.3	Biological Treatment	147
4.4.4	Combined Treatment	148
4.4.5	Comparison of Different Treatment Methods	149
4.5	Hydrogen Production from Organic Wastes	152
4.5.1	Hydrogen Production from Waste Activated Sludge	152
4.5.2	Hydrogen Production from Algal Biomass	152
4.5.3	Hydrogen Production from Cellulose-Based Biomass	165
4.5.4	Hydrogen Production from Starch-Based Biomass	175
4.5.5	Hydrogen Production from Food Wastes	175
4.5.6	Hydrogen Production from Wastewater	177
4.6	Concluding Remarks and Perspectives	181
	References	183
5	Influencing Factors for Biohydrogen Production	197
5.1	Introduction	197
5.2	Effect of Inoculum	198
5.2.1	Pure Cultures	198
5.2.2	Mixed Cultures	198
5.3	Effect of Substrate	203
5.3.1	Overview	203
5.3.2	Effect on Substrate Degradation Efficiency	208
5.3.3	Effect on Hydrogen Production	209
5.3.4	Effect on Hydrogen Production Rate	210
5.3.5	Effect on Soluble Metabolites Distribution	211
5.3.6	Effect on Final pH	212
5.4	Effect of Reactor Type	213
5.5	Effect of Nitrogen and Phosphate	216
5.5.1	Overview	216
5.5.2	Effect of Ammonia Concentration	219
5.5.3	Effect of Nitrate Concentration	224

5.6	Effect of Trace Heavy Metal Ion	229
5.6.1	Importance of Heavy Metal Ions	229
5.6.2	Effect of Fe^{2+}	232
5.6.3	Effect of Mg^{2+}	236
5.6.4	Influence of Ni^{2+}	242
5.7	Effect of Temperature	246
5.7.1	Overview	246
5.7.2	Effect on Substrate Degradation Efficiency	246
5.7.3	Effect on Hydrogen Production	246
5.7.4	Effect on Soluble Metabolites Concentration	252
5.7.5	Effect on Biomass Concentration	252
5.7.6	Effect on Final pH	252
5.8	Effect of pH	253
5.8.1	Overview	253
5.8.2	Effect on Substrate Degradation Efficiency	255
5.8.3	Effect on Hydrogen Production	257
5.8.4	Effect on Hydrogen Production Rate	258
5.8.5	Effect on Soluble Metabolites Distribution	259
5.8.6	Effect on Final pH	260
5.8.7	Comparison of the Optimal Initial pH	260
	References	261
6	Kinetic Models for Hydrogen Production	269
6.1	Introduction	270
6.2	The Progress of Hydrogen Production Process	271
6.3	The Effect of Substrate Concentration on Hydrogen Production	275
6.4	The Effect of Inhibitor Concentration on Hydrogen Production	279
6.5	The Effect of Temperature on Hydrogen Production	280
6.6	The Effects of pH on Hydrogen Production	283
6.7	The Effect of Dilution Rate on Hydrogen Production	283
6.8	The Relationship Among Substrate Degradation Rate, HPB Growth and Product Formation	285
6.9	Conclusions	287
	References	287
7	Optimization of Hydrogen Production Process	291
