1	Introduction	1
1.1	Basics of Magnetic Recording	2
1.2	Magnetic Hard Disk Drives	5
1.2.1	Magnetic Read/Write Head	6
1.2.2	Magnetic Disk Media	6
1.2.3	The Head-Disk Interface	6
1.2.4	The Superparamagnetic Effect	10
1.2.5	Magnetic Recording Technologies for $>1 \text{ Tb/in}^2$ Areal Densities	11
1.2.6	Requirements at the Head-Disk Interface for High Density Magnetic Recording	13
1.3	Magnetic Tape Drives	14
1.3.1	Magnetic Tape Media	15
1.3.2	Magnetic Tape Head	16
1.3.3	Magnetic Spacing at the Head-Tape Interface	17
1.3.4	Issues Arising from Long-Term Head-Tape Interaction	18
1.3.5	Requirements at the Head-Tape Interface for High Density Magnetic Recording	21
1.4	Motivation of the Thesis	22
1.5	Organization of the Thesis	22
	References	23
2	Overview of Amorphous Carbon Films	29
2.1	The Versatility of Carbon: Structure and Bonding	29
2.2	Introduction to Amorphous Carbon Films	31
2.3	Mechanism for sp^3C Bond Formation and Its Importance	33
2.4	Thickness Dependence of sp^3 Content in Ultrathin Amorphous Carbon Films	35
	References	36

3 Overcoat Fabrication and Characterization	39
3.1 Overcoat Fabrication Techniques	39
3.1.1 Magnetron Sputtering	39
3.1.2 Filtered Cathodic Vacuum Arc (FCVA)	41
3.1.3 Plasma-Enhanced Chemical Vapor Deposition (PECVD)	42
3.2 Overcoat Characterization Techniques	43
3.2.1 High Resolution Transmission Electron Microscopy (HRTEM)	43
3.2.2 Tapping Mode Atomic Force Microscopy (AFM)	43
3.2.3 Ball-on-Disk Tribological Testing	43
3.2.4 Electrochemical Corrosion	45
3.2.5 Electrical Properties	46
3.2.6 Mechanical Properties	47
3.2.7 Head-Tape Interface Testing	47
3.2.8 Time-of-Flight Secondary Ion Mass Spectrometry (TOF-SIMS)	48
3.2.9 Auger Electron Spectroscopy (AES)	48
3.2.10 X-Ray Photoelectron Spectroscopy (XPS)	49
3.2.11 Raman Spectroscopy	49
References	50
4 Optimization of Ultrathin Carbon Overcoats on Hard Disk Media	53
4.1 Determination of Ion Energies for FCVA Carbon Embedment and Deposition	53
4.2 Overcoat Formation on CoCrPt:Oxide Media by an FCVA Bi-Level C350/90 eV Energy Process	54
4.2.1 Overcoat Fabrication	56
4.2.2 Thickness Characterization	57
4.2.3 Surface Roughness	58
4.2.4 Corrosion Resistance	60
4.2.5 Tribological Properties	60
4.2.6 Experiments with a PFPE Lubricant Layer	61
4.2.7 Relation of Functional Properties to Microstructure	63
4.3 Thermal Stability of the FCVA-Processed Carbon Overcoat	67
4.4 Ion Energy Optimization of the FCVA Process Without Functional Performance Degradation	68
4.5 Conclusions	70
References	71

5 Development of a Protective SiN_x/C Bi-Layer Overcoat for Hard Disk Media.	73
5.1 Introduction	73
5.2 Literature Review	74
5.3 Motivation of This Work	74
5.4 Experimental Methodology	75
5.5 Results and Discussion	77
5.5.1 Overcoat Thickness and Surface Roughness	77
5.5.2 Tribological Properties and Wear Resistance	78
5.5.3 Corrosion Resistance	80
5.5.4 Macromagnetic Properties	81
5.5.5 Bonding Environment, Microstructure and Structure-Functional Property Relationship	81
5.6 Conclusions	85
References	85
6 Wear-Durable Protective Overcoats for Functional Tape Heads.	87
6.1 Introduction	87
6.2 A Facile Approach to Develop a SiN _x /C Overcoat for Functional Tape Heads	89
6.2.1 Motivation of This Work	89
6.2.2 Experimental Methodology	89
6.2.3 Tribological Properties	91
6.2.4 2D Surface Profiles Before and After Tape Testing	93
6.2.5 Surface Elemental Composition After Tape Testing	96
6.2.6 Microstructure of the Carbon Layer	98
6.2.7 Probing the Interfacial Bonding by Depth Profiling	99
6.2.8 Functional Performance Above 1 Million Meters	107
6.2.9 Conclusions	110
6.3 Remarkable Wear Life of a SiN _x /ta-C Overcoat on a Functional Tape Head	110
6.3.1 Motivation of This Work	110
6.3.2 Experimental Methodology	111
6.3.3 Tribological Properties	113
6.3.4 Microstructure of the ta-C Layer	114
6.3.5 Probing the Variation of Elemental Composition with Overcoat Thickness	115
6.3.6 Probing the Bonding Environment in the ta-C Layer and at the Interfaces	116
6.3.7 Long-Term Functional Testing in a Tape Drive Environment	116
6.3.8 Role of sp ² C/sp ³ C Bonding on Friction and Wear	121
6.3.9 Conclusions	121

6.4	Characterization of Monolithic and Bi-Layer Overcoats Fabricated by Sputtering and FCVA.	122
6.4.1	Motivation of This Work.	122
6.4.2	Experimental Methodology	123
6.4.3	Overcoat Thickness and Surface Roughness	124
6.4.4	Mechanical Properties	127
6.4.5	Electrical Properties.	129
6.4.6	Microstructure and Interfacial Bonding	130
6.4.7	Conclusions.	131

7	Graphene as a Protective Overcoat for Hard Disk Media	135
7.1	Introduction	135
7.2	Experimental Methodology.	137
7.3	Raman Spectroscopy of the Graphene Overcoat.	137
7.4	Tribological Performance	138
7.5	Corrosion Performance.	141
7.6	Conclusions and Future Work	142
	References.	143
8	Conclusions and Future Work	145
8.1	Ultrathin Carbon-Based Overcoats for Future Magnetic Hard Disk Media.	145
8.2	Ultrathin Carbon-Based Overcoats for Future Magnetic Tape Heads	147
8.3	Novelty of the Thesis.	148
8.4	Future Work.	149
	References.	150
	Appendix A: Details of Characterization Methods Used in This Thesis	151
	Appendix B: Details of the Parametric Data Measurements for the Long-Term Tape Test of Functional Tape Heads	159
	Appendix C: Details of the Raman and XPS Spectra Analyses for the 17–20 nm Monolithic and Bi-Layer Overcoats.	161

Ultrathin Carbon-Based Overcoats for Extremely High
Density Magnetic Recording

Yeo, R.J.

2017, XVIII, 167 p. 90 illus., 23 illus. in color., Hardcover

ISBN: 978-981-10-4881-4
