

# Contents

<b>1</b>	<b>Introductory Concepts</b>	1
1.1	Languages, Terms and Formulas	1
1.2	Structures and Truth in a Structure	4
1.3	Examples of Theories	8
1.4	Homomorphism	13
1.5	Embedding	14
1.6	Isomorphism and Categoricity of Theories	19
1.7	Elementary Embedding	23
1.8	Skolemization of a Theory	27
1.9	Definability	29
1.10	Definable and Algebraic Closures	33
1.11	Many-Sorted Logic and Imaginary Elements	37
1.12	Elimination of Imaginaries	40
<b>2</b>	<b>Basic Introductory Results</b>	45
2.1	Ultraproduct of Structures	45
2.2	Compactness Theorem	50
2.3	Some Consequences of Compactness Theorem	54
2.4	Preservation Results	56
2.5	Extensions of Partial Elementary Maps	58
2.6	Upward Löwenheim–Skolem Theorem	59
2.7	Some Complete Theories	60
2.8	Amalgamation	61
2.9	Quantifier Elimination	63
2.10	Examples of Quantifier Elimination	68
2.11	Strongly Minimal and O-Minimal Theories	71
2.12	Independence and Dimension in Minimal Sets	74
2.13	More Complete Theories	77

2.14	Model Completeness. . . . .	78
2.15	Some Applications to Algebra and Geometry. . . . .	81
<b>3</b>	<b>Spaces of Types. . . . .</b>	<b>85</b>
3.1	Realised Types . . . . .	85
3.2	$n$ -Types. . . . .	87
3.3	Stone Topology on the Space of Complete Types . . . . .	89
3.4	Isolated Types . . . . .	91
3.5	Algebraic Types . . . . .	98
3.6	Omitting Types Theorems . . . . .	99
3.7	Cardinalities of the Spaces of Complete Types. . . . .	101
<b>4</b>	<b>Good Structures and Good Theories . . . . .</b>	<b>105</b>
4.1	Homogeneous Structures . . . . .	105
4.2	Atomic Structures. . . . .	109
4.3	Saturated Structures . . . . .	112
4.4	Existence of Saturated Structures and Monster Model . . . . .	117
4.5	Some Consequences of Saturability . . . . .	119
4.6	Type Definable Sets . . . . .	124
4.7	$\aleph_0$ -Categorical Theories . . . . .	126
4.8	Stable Theories. . . . .	128
4.9	Morley Rank. . . . .	133
4.10	Morley Degree . . . . .	137
4.11	Rank and Degree of Types. . . . .	139
4.12	Definable Types . . . . .	143
4.13	Forking Independence. . . . .	147
<b>5</b>	<b>Morley Categoricity Theorem. . . . .</b>	<b>151</b>
5.1	Existence of Indiscernibles . . . . .	151
5.2	Applications of Indiscernibility. . . . .	156
5.3	Vaughtian Pair of Models. . . . .	159
5.4	Morley Categoricity Theorem. . . . .	164
<b>6</b>	<b>Strong Types . . . . .</b>	<b>167</b>
6.1	General Facts on Bounded, Invariant, Equivalence Relations . . . .	167
6.2	Shelah Strong Types and Kim–Pillay Strong Types . . . . .	171
6.3	Lascar Strong Types. . . . .	172
6.4	The Galois Group $Gal_L(T)$ . . . . .	175
6.5	Topology on $Gal_L(T)$ . . . . .	178
6.6	The Group $Gal_0(T)$ . . . . .	186
6.7	$E_{KP}$ as an Orbit Space . . . . .	188
6.8	Connection with Descriptive Set Theory. . . . .	190

<b>7 Model Theory of Valued Fields</b> . . . . .	193
7.1 The Language for Valued Fields . . . . .	193
7.2 Ultraproduct of Valued Fields. . . . .	195
7.3 Ax–Kochen Theorem on Artin’s Conjecture. . . . .	197
7.4 Quantifier Elimination and Model Completeness of Valued Fields . . . . .	204
<b>Appendix A: Set Theory</b> . . . . .	209
<b>Appendix B: Algebra</b> . . . . .	221
<b>Appendix C: Valued Fields</b> . . . . .	239
<b>Bibliography</b> . . . . .	283
<b>Index</b> . . . . .	287
