
Contents

1 Tissue Engineering and Cell-Based Therapy in Regenerative Medicine	1
1.1 Current Status of International Research on Tissue Engineering of Stem Cells into Lungs	1
1.2 Current Status of National Research on Tissue Engineering of Stem Cells into Lungs	3
1.3 Different Techniques of Tissue Engineering for Induction of Differentiation of Pluripotent Stem Cells	4
1.3.1 Production of Induced Pluripotent Stem Cells (IPSCs) Using <i>Drosophila</i> as a Model Organism	7
1.3.2 Conclusion	8
1.4 Isolation of <i>Drosophila</i> Stem Cells from Ovary-Fundamental Studies for Translation	9
1.4.1 The Adult <i>Drosophila</i> Ovary	9
1.4.2 Why Can the <i>Drosophila</i> Ovary Be Used for Stem Cell Studies?	10
1.4.3 Isolation and Characterization of Germline Stem Cells (GSCs) from <i>Drosophila</i> Ovary	10
1.4.4 Why Are These Techniques Necessary?	13
1.4.5 Conclusion	14
1.5 Outline of a Project Proposal-Differentiation of Mouse and Human ESCs into Lung-Specific Cells	15
1.6 Outline of a Project-Differentiation of HESCs (BJNh19 and BJNh20) into Lung-Specific Cells	32
References	53
2 Nanoparticles as Anti-inflammatory and Pro-regenerative Therapeutic Molecules	57
2.1 Background and Novelty of This Translational Project	57
2.1.1 Chemistry and Synthesis	57
2.1.2 Translational Outcomes Study in Biology	57
2.2 Objective	58
2.2.1 Chemistry Part	58
2.2.2 Biology Part	59
2.3 Outcome	59

2.4	Introduction	63
2.4.1	Nanoparticles as a Novel Anti-inflammatory Molecule	63
2.4.2	Inflammation	63
2.4.3	Nanoparticles as Anti-inflammatory Molecule	63
2.4.4	Formulation of Nanoparticle-Mediated Drug Delivery.	64
2.4.5	Nanomedicine.	65
2.5	Some Inflammatory Diseases.	66
2.6	Origin of the Project	68
2.6.1	Unmet Needs in These Inflammatory and Degenerative Diseases	68
2.7	Rationale of the Study Supported by Cited Literature	68
2.7.1	Nano-formulation for Targeted Drug Delivery of Anti-inflammatory Molecules	68
2.7.2	Drug-Nanoparticles Encapsulation Procedures	69
2.8	Hypothesis	70
2.9	Key Questions.	70
2.10	Current Status of Research and Development in the Subject (Both International and National Status)	70
2.11	The Relevance and Expected Outcome of the Proposed Study	72
2.11.1	Relevance for Conceiving the Project Proposal.	72
2.11.2	Chemistry Part	73
2.11.3	<u>Biology Part</u>	73
2.12	Preliminary Work Done for Capacity Building for Project Execution	73
2.12.1	Anti-inflammatory Activities of Nano Particles	74
2.12.2	Cell Viability Determination.	75
2.12.3	Results.	75
2.12.4	Conclusion	78
2.13	Specific Objectives.	78
2.14	Work Plan	79
3	Novel Combinatorial Probiotics in Therapy and Prophylaxis	89
3.1	Introduction	89
3.2	Problems Associated with IBD Diagnosis	90
3.3	Background of the Diseases	90
3.4	Etiology	90
3.5	Pathogenesis	91
3.6	Objectives of the Study	92
3.7	Preliminary Investigations Done by Organization.	93
3.8	Science and Technology Components of the Study	93
3.9	List of Bacteria to Be Cultured	94

3.9.1	Freeze-Dried Powder Lactic Probiotic Culture. . . .	94
3.9.2	Agar Stab Cultures of Probiotic.	94
3.10	Methodology Detailing Stepwise Activities and Sub-activities.	94
	References	96
4	Bioprospecting Biodiversity to Generate Bioresources	99
4.1	Bioprospecting of Microbes	99
4.2	Bioprospecting of Plants.	99
4.3	Bioprospecting of Invertebrates	100
4.4	Drosophila—A Case Study for Bioprospecting	100
4.5	Bioprospecting of Vertebrates	101
4.6	Systems Biology in Bioprospecting	101
4.7	ADMET in Drug Discovery Using Natural Compounds Obtained from Biodiversity.	101
4.7.1	Clinical Candidate Optimization	101
	References	102
5	Pharmacogenomics and Molecular Diagnostics	105
5.1	Sub-chapter A: Development and Validation of PCR-Based Diagnostic Test for Rapid Detection of Emergent Pathogens.	105
5.1.1	Specific Aims.	105
5.1.2	Background and Significance	105
5.1.3	Relevant Conclusions from Published Literature	108
5.1.4	Preliminary Results from the Principal Investigator's (PI) Laboratory	108
5.1.5	Research Design/Methods.	108
5.1.6	Time Table for the Proposed Work	110
5.2	Sub-chapter B: Identification of Biomarkers for Differential Diagnosis of Allergic and Non-allergic Respiratory Diseases from Exhaled Breath Condensate	110
5.2.1	Introduction	110
5.2.2	Experimental Setup	111
5.2.3	Measurements of Mediators in EBC	112
5.2.4	Use of EBC in Inflammatory Diseases of the Lung	114
5.2.5	Use of EBC in COPD	114
5.2.6	Use of EBC in Asthma	115
5.2.7	Use of EBC in Allergic Rhinitis	116
5.2.8	Future Scope of Development.	116
	References	116
6	Nutraceuticals—Prophylactic and Therapeutic Role of Functional Food in Health	119
6.1	Introduction	119
6.2	Functional Foods from Plant Sources	120
6.2.1	Oats	120
6.2.2	Soy	120

6.2.3	Rice	121
6.2.4	Wheat	121
6.2.5	Maize	121
6.2.6	Barley	121
6.2.7	Millets	121
6.2.8	Fig	122
6.2.9	Fenugreek	122
6.2.10	<i>Cordyceps</i> Mushroom	122
6.2.11	Flaxseed	123
6.2.12	Tomatoes	123
6.2.13	Garlic	124
6.2.14	Cruciferous Vegetables	124
6.2.15	<i>Citrus</i> Fruits	124
6.2.16	Cranberry	124
6.2.17	Tea	124
6.2.18	Wine	125
6.2.19	Cocoa	125
6.3	Functional Foods from Animal Sources	125
6.3.1	Fish Oil	125
6.3.2	Dairy Products	125
6.3.3	Beef	126
6.4	Safety Issues	126
6.5	Impact of Urbanization on Health and Functional Food Market	126
6.6	Size and Growth of the Functional Food and Nutraceutical Market in India	126
6.7	Conclusion	129
