## Part I Random and Stochastic Ordinary Differential Equations

<b>1</b>	<b>Introduction</b>	3
1.1	Simple Numerical Schemes for RODEs	4
1.2	Taylor Expansions for RODEs	6
1.2.1	ODE Case	6
1.2.2	SODE Case	7
1.2.3	RODE Case	8
1.3	RODEs with Bounded Noise	11
1.4	RODEs and Carathéodory ODEs	12
1.5	Endnotes	13
<b>2</b>	<b>Random Ordinary Differential Equations</b>	15
2.1	Existence and Uniqueness Theorems	16
2.1.1	Classical Assumptions	16
2.1.2	Measurability of Solutions	20
2.1.3	Carathéodory Assumptions	21
2.1.4	Positivity of Solutions	24
2.2	RODEs with Canonical Noise	25
2.3	Endnotes	26
<b>3</b>	<b>Stochastic Differential Equations</b>	29
3.1	Wiener Processes and Itô Integrals	30
3.2	Itô Stochastic Differential Equations	31
3.3	The Itô Formula: The Stochastic Chain Rule	33
3.4	Stratonovich SODEs	34
3.5	Relationship Between RODEs and SODEs	35
3.5.1	Doss–Sussmann Transformation	35
3.6	Endnotes	36

<b>4</b>	<b>Random Dynamical Systems</b> . . . . .	37
4.1	Nontrivial Equilibrium Solutions . . . . .	37
4.2	Random Dynamical Systems . . . . .	42
4.2.1	Random Attractors. . . . .	43
4.2.2	Contractive Cocycles. . . . .	46
4.3	Endnotes. . . . .	47
<b>5</b>	<b>Numerical Dynamics</b> . . . . .	49
5.1	Discretisation of Random Attractors . . . . .	49
5.2	Discretisation of a Random Hyperbolic Point. . . . .	53
5.3	Endnotes. . . . .	58

## Part II Taylor Expansions

<b>6</b>	<b>Taylor Expansions for Ordinary and Stochastic Differential Equations</b> . . . . .	61
6.1	Taylor Approximations for ODEs. . . . .	61
6.2	Taylor Approximations of Itô SODEs. . . . .	62
6.2.1	Multi-indices . . . . .	64
6.2.2	Multiple Integrals of Stochastic Processes . . . . .	64
6.2.3	Coefficient Functions. . . . .	65
6.2.4	Hierarchical and Remainder Sets. . . . .	66
6.3	General Itô–Taylor Expansions. . . . .	66
6.4	Strong Itô–Taylor Approximations . . . . .	69
6.4.1	Examples. . . . .	70
6.4.2	Pathwise Convergence. . . . .	70
6.5	Endnotes. . . . .	72
<b>7</b>	<b>Taylor Expansions for RODEs with Affine Noise</b> . . . . .	73
7.1	An Illustrative Example . . . . .	74
7.2	Affine-RODE Taylor Expansions . . . . .	76
7.3	General Affine-RODE-Taylor Approximations . . . . .	77
7.4	Endnotes. . . . .	79
<b>8</b>	<b>Taylor-Like Expansions for General Random Ordinary Differential Equations</b> . . . . .	81
8.1	Preliminaries and Notation . . . . .	81
8.1.1	Regularity of the Driving Stochastic Process. . . . .	82
8.1.2	Multi-index Notation. . . . .	83
8.1.3	Iterated Integrals . . . . .	84
8.1.4	Function Spaces. . . . .	84
8.1.5	Iterated Differential Operators . . . . .	85
8.2	Integral Equation Expansions . . . . .	86
8.3	RODE-Taylor Approximations . . . . .	88
8.4	Essential RODE-Taylor Approximations. . . . .	89

8.5	Examples . . . . .	91
8.6	Proof of Theorem 8.1 . . . . .	94
8.7	Endnotes . . . . .	98

### **Part III Numerical Schemes for Random Ordinary Differential Equations**

<b>9</b>	<b>Numerical Methods for Ordinary and Stochastic Differential Equations . . . . .</b>	<b>101</b>
9.1	One-Step Numerical Schemes for ODEs . . . . .	101
9.2	One-Step Numerical Schemes for Itô SODEs . . . . .	104
9.3	Strong Taylor Schemes for Itô SODEs . . . . .	105
9.4	Endnotes . . . . .	108
<b>10</b>	<b>Itô–Taylor Schemes for RODEs with Itô Noise . . . . .</b>	<b>109</b>
10.1	One-Step Schemes . . . . .	110
10.1.1	Scalar Case . . . . .	110
10.1.2	Vector Case . . . . .	111
10.1.3	Examples . . . . .	113
10.1.4	Derivative-Free Explicit Strong Schemes . . . . .	114
10.2	Implicit Strong Schemes . . . . .	116
10.3	Multi-step Schemes . . . . .	117
10.4	RODEs with Affine Noise . . . . .	124
10.5	Proof of Theorem 10.1 . . . . .	125
10.6	Endnotes . . . . .	127
<b>11</b>	<b>Numerical Schemes for RODEs with Affine Noise . . . . .</b>	<b>129</b>
11.1	Affine-RODE Taylor Schemes for Bounded Noise . . . . .	130
11.2	Affine-RODEs with Special Structure . . . . .	133
11.2.1	Additive Noise . . . . .	133
11.2.2	Commutative Noise . . . . .	133
11.3	Affine-RODE Derivative-Free Schemes . . . . .	134
11.3.1	Finite Difference Approximation of Derivatives . . . . .	134
11.3.2	Runge–Kutta Schemes for Affine-RODE . . . . .	136
11.4	Linear Multi-step Methods for Affine RODEs . . . . .	139
11.5	Endnotes . . . . .	142
<b>12</b>	<b>RODE-Taylor Schemes: General Case . . . . .</b>	<b>143</b>
12.1	RODE-Taylor Schemes . . . . .	143
12.1.1	The Essential RODE-Taylor Schemes . . . . .	146
12.2	Examples of the RODE-Taylor Schemes . . . . .	147
12.3	RODEs with Affine Noise . . . . .	149
12.4	Other Numerical Schemes for RODEs . . . . .	150
12.4.1	The Local Linearisation Scheme for RODEs . . . . .	150
12.4.2	The Averaged Euler Scheme . . . . .	152

12.4.3	Heuristic RODE-Taylor Schemes . . . . .	152
12.5	Endnotes . . . . .	153
<b>13</b>	<b>Numerical Stability . . . . .</b>	<b>155</b>
13.1	B-Stability of the Implicit Averaged Schemes . . . . .	156
13.2	B-Stability of the Implicit Multi-step Schemes . . . . .	158
13.3	Endnotes . . . . .	161
<b>14</b>	<b>Stochastic Integrals: Simulation and Approximation . . . . .</b>	<b>163</b>
14.1	Calculating a Finer Approximation of the Same Sample Path . . . . .	164
14.2	Integral of a Wiener Process . . . . .	165
14.3	Integral of an Ornstein–Uhlenbeck Process . . . . .	165
14.4	Fractional Brownian Motion . . . . .	167
14.4.1	Riemann Integral of an fBm . . . . .	172
14.4.2	Riemann Sums Approximation . . . . .	173
14.4.3	Comparison of Computational Costs . . . . .	174
14.5	Integrals of Compound Poisson Processes . . . . .	177
14.6	Endnotes . . . . .	179
 <b>Part IV Random Ordinary Differential Equations in the Life Sciences</b>		
<b>15</b>	<b>Comparative Simulations of Biological Systems . . . . .</b>	<b>183</b>
15.1	Tumor Inhibition Model . . . . .	183
15.2	Population Dynamics . . . . .	185
15.3	Toggle Switch Model . . . . .	187
15.4	Sea Shell Pattern Model . . . . .	189
15.5	Endnotes . . . . .	192
<b>16</b>	<b>Chemostat . . . . .</b>	<b>193</b>
16.1	Random Chemostat Models . . . . .	194
16.2	RDS Generated by Random Chemostat . . . . .	196
16.3	Existence of a Random Attractor . . . . .	198
16.4	Endnotes . . . . .	203
<b>17</b>	<b>Immune System Virus Model . . . . .</b>	<b>205</b>
17.1	Properties of Solutions . . . . .	206
17.2	Existence of Global Random Attractors . . . . .	208
17.3	Numerical Simulations . . . . .	212
17.4	Endnotes . . . . .	214
<b>18</b>	<b>Random Markov Chains . . . . .</b>	<b>215</b>
18.1	Random Environment . . . . .	216
18.2	Positivity of Solutions of Linear RODEs . . . . .	217
18.3	Linear Random Dynamical Systems . . . . .	220

18.4	Random Attractor Under Discretisation . . . . .	221
18.5	Endnotes . . . . .	222
<b>Appendix A: Probability Spaces . . . . .</b>		<b>223</b>
<b>Appendix B: Chain Rule for Affine RODEs . . . . .</b>		<b>227</b>
<b>Appendix C: Covariance Matrix of a Fractional Brownian Motion and Its Integral . . . . .</b>		<b>231</b>
<b>References . . . . .</b>		<b>241</b>
<b>Index . . . . .</b>		<b>247</b>

Random Ordinary Differential Equations and Their  
Numerical Solution

Han, X.; Kloeden, P.E.

2017, XVII, 250 p. 21 illus. in color., Hardcover
