

Contents

1 Overview of Bayesian Optimization in Materials Science	1
1.1 Brief Overview of Bayesian Optimisation	1
1.2 Examples of Bayesian Optimisation in Materials Science	4
1.2.1 Prediction of Compounds with Low Thermal Conductivity	4
1.2.2 Prediction of Compounds with Optimal Melting Temperatures and Elastic Properties	5
1.2.3 Prediction of Interface Structures	6
1.2.4 Design of Interface Nanostructure	7
1.3 Bayesian Optimization Requires Good Feature Vectors	8
References	10
2 Theory of Bayesian Optimization	11
2.1 Bayesian Interpretation of Probability	11
2.2 Equilibrium Bond Lengths <i>Via</i> Bayesian Optimization	12
2.2.1 Prior Probability	14
2.2.2 Likelihood Function and Posterior Distribution	15
2.2.3 Example Calculation of the Posterior Distribution	17
2.2.4 The Expected Improvement	18
2.2.5 Example Run of Bayesian Optimisation	19
2.2.6 Training	22
2.3 Bayesian Optimization in the General Case	23
2.4 R Code for Bayesian Optimization	24
References	28
3 Bayesian Optimization of Molecules Adsorbed to Metal Surfaces	29
3.1 Density Functional Theory for Surface Science	29
3.2 Bayesian Optimization for Surface Science	31

3.2.1 Preliminary Computational Study 32

3.2.2 Statement of Optimization Problem. 34

3.2.3 Data Description 35

3.2.4 Choice of Feature Vectors 36

3.2.5 Training of Hyperparameters 37

3.2.6 Predictive Performance 39

3.2.7 Discussion. 40
