

Contents

1	Tensor Product	1
1.1	Definition of the Tensor Product	1
1.2	Properties of the Tensor Product	4
1.2.1	Functoriality	4
1.2.2	More Properties	4
1.2.3	Kronecker Product of Matrices	7
1.2.4	Tensor Product and Homomorphisms	9
1.2.5	Extension of Scalars	10
1.2.6	Trace and Restriction of Scalars	11
1.3	Symmetric and Alternating Powers	12
1.3.1	Symmetric and Alternating Squares	12
1.3.2	Tensor, Symmetric and Exterior Algebras	13
1.4	Tensor Product over an Algebra	15
2	On Representations	19
2.1	Generalities on Representations	19
2.1.1	Introduction	19
2.1.2	General Representations	20
2.2	Set-Representations	23
2.2.1	Union and Product	23
2.2.2	Transitive Representations	24
2.2.3	Classification of Transitive Representations	25
2.2.4	Burnside's Marks	26
2.3	Linear Representations	29
2.3.1	Generalities	29
2.3.2	Finite Groups: The Group Algebra	35
3	Characteristic 0 Representations	41
3.1	Preliminary: $\frac{1}{ G } \sum_{g \in G} g$	41
3.1.1	Fixed Points	41

3.1.2	Maschke's Theorem	42
3.1.3	Spectrum	44
3.2	Characters	44
3.2.1	First Properties	44
3.2.2	Orthogonality Relations and First Applications	47
3.2.3	Splitting Fields	54
3.2.4	From Permutations to Characters	58
3.3	Structure of the Group Algebra	60
3.3.1	A Product of Endomorphism Algebras	60
3.3.2	Canonical Decomposition of a Representation	62
3.4	Group Determinant	64
3.5	Center and Action of Cyclotomic Galois Groups	66
3.5.1	About Centers	67
3.5.2	Extending and Restricting Scalars	68
3.5.3	Action of $(\mathbb{Z}/e_G\mathbb{Z})^\times$ and of Galois Groups of Cyclotomic Extensions	72
3.6	More on a Splitting Field and First Applications	75
3.6.1	Character Tables	75
3.6.2	Products of Groups	77
3.6.3	Abelian Groups	78
3.7	Some Arithmetical Properties of Characters	79
3.7.1	Characters and Integrality	79
3.7.2	Applications: Two Theorems of Burnside	82
4	PLAYING with the BASE FIELD	91
4.1	Analysis of an Irreducible Module	91
4.1.1	An Example: The Quaternion Group Q_8	91
4.1.2	Scalars of an Irreducible Module	94
4.1.3	Schur Indices	97
4.2	Complements on Rationality	100
4.2.1	Group of Characters and Rationality	100
4.2.2	Reflections and Rationality	103
4.2.3	Questions of Rationality over \mathbb{R}	105
5	Induction, Restriction	111
5.1	On Any Field	111
5.1.1	Restriction	111
5.1.2	Induction	112
5.1.3	Mackey Formula	119
5.2	Induction and Restriction in Characteristic Zero	121
5.2.1	Induction and Normal Subgroups	121
5.2.2	Induction and Restriction for Class Functions	122
5.2.3	Application of Induction to an Example	126

6 Brauer's Theorem and Some Applications	131
6.1 Artin's Theorem	131
6.2 Brauer's Characterization of Characters	133
6.2.1 Statement and First Consequences	133
6.2.2 Proof of Brauer's Theorem	135
6.3 Fusion and Isometries	140
6.3.1 π -elements and Class Functions	141
6.3.2 π -Control Subgroups	141
6.4 Some Fundamental Theorems about Finite Groups	144
6.4.1 Existence of a Normal π -Complement	145
6.4.2 π -trivial Intersection Subgroups	146
6.4.3 Frobenius Groups	147
7 Graded Representation and Characters	155
7.1 Graded Vector Spaces, Algebras, Modules	155
7.1.1 Graded Vector Spaces	155
7.1.2 Graded Algebras and Modules	157
7.1.3 Nakayama's Lemma	160
7.1.4 Free Graded Modules	161
7.1.5 Polynomial Algebras and Noether Parameters	164
7.2 Graded Characters of Graded kG -modules	167
7.2.1 Notation and Definitions	167
7.2.2 Isotypic Components of the Symmetric Algebra	169
7.2.3 Computations with Power Series	172
7.2.4 A Simple Example	174
7.2.5 Complement: Reflection Groups	175
8 Drinfeld Double	179
8.1 The Drinfeld Double of a Finite Group as an Algebra	179
8.1.1 The Semidirect Product of kG and Its Dual	180
8.1.2 A Description of ${}_{D_kG}\mathbf{mod}$	183
8.1.3 On the Center $Z(D_kG)$ and Central Functions Again	186
8.2 Hopf Algebras: An Introduction from Scratch	189
8.2.1 Notation for Multiple Tensor Products	189
8.2.2 Algebras, Coalgebras, Bialgebras, Hopf Algebras	191
8.2.3 On Algebra Representations of a Hopf Algebra	196
8.3 The Drinfeld Double as a Ribbon Hopf Algebra	198
8.3.1 Universal R -matrix for D_kG	198
8.3.2 The Category ${}_{D_kG}\mathbf{mod}$ is a Ribbon Category	201
8.3.3 A Description of ${}_{D_kG}\mathbf{mod}$ as a Ribbon Category	202
8.4 Action of $\mathrm{GL}_2(\mathbb{Z}/e_G\mathbb{Z})$	208
8.4.1 The Automorphisms $\mathbf{S}, \mathbf{\Omega}, \mathbf{\Delta}_n$	208
8.4.2 Action of $\mathrm{GL}_2(\mathbb{Z}/e_G\mathbb{Z})$	211
8.4.3 The Verlinde Formula	212

Appendix A: Basics on Finite Groups	217
Appendix B: Assumed Results on Galois Theory	221
Appendix C: Integral Elements	225
Appendix D: Noetherian Rings and Modules	229
Appendix E: The Language of Categories and Functors	233
Bibliography	241
Index	243

On Characters of Finite Groups

Broué, M.

2017, XVI, 246 p. 9 illus., 5 illus. in color., Hardcover

ISBN: 978-981-10-6877-5
