

Contents

- 1 Introduction to R** 1
 - 1.1 What Is R? 1
 - 1.2 Libraries in R 1
 - 1.3 Installing R 3
 - 1.4 Running R 3
 - 1.5 Installing Add-on Packages and Libraries 4
 - 1.6 Basic Data Types 5
 - 1.6.1 Numeric 6
 - 1.6.2 Integer 6
 - 1.6.3 Logical 7
 - 1.6.4 Character 7
 - 1.7 Data Structure 8
 - 1.7.1 Vector 8
 - 1.7.2 Matrix 12
 - 1.7.3 Data Frame 13
 - 1.7.4 List 15
 - 1.7.5 Factor 16
 - 1.8 Read File into R 17
 - References 19
- 2 Basic Concepts** 21
 - 2.1 Contingency, Square, and Doubly Classified Table 21
 - 2.2 Generating Frequency Tables 22
 - 2.2.1 Tables from Vector 22
 - 2.2.2 Tables from Data Frame 23
 - 2.2.3 Margin Total and Proportion 24
 - 2.2.4 xtab Function 25
 - 2.2.5 Package gmodels, CrossTable Function 26
 - 2.2.6 Package descr, CrossTable Function 26

2.3	Graphics for Tabulation	27
2.3.1	Bar Plot—Base	28
2.3.2	Package ggplot2	29
2.3.3	Package lattice	30
2.4	Odds, Odds Ratios, Local Odds Ratios, and Margin	30
2.4.1	Odds	31
2.4.2	Properties and Interpretation of Odds	31
2.4.3	Odds Ratio	33
2.4.4	Log Odds Ratio and Confidence Interval	35
2.4.5	Margin Total	38
2.5	Applications of Doubly Classified Data	39
2.5.1	Studies on Pairs of Matched Individuals	39
2.5.2	Association Between Two Essentially Similar Variables	40
2.5.3	Two Point Longitudinal Study for a Common Variable	42
2.5.4	Inter-rater Agreement	43
2.5.5	Two Indicators from a Scale	44
	References	47
3	Examining Symmetry of Doubly Classified Table	49
3.1	McNemar's Test of Symmetry	50
3.2	Variations of McNemar's Test	51
3.2.1	Exact Binomial Test	51
3.2.2	Mid-P McNemar's Test	51
3.2.3	Which Test to Use?	54
3.3	Bower's Test of Symmetry	54
3.4	Marginal Symmetry/Homogeneity Model	56
	References	60
4	Symmetry and Asymmetry Models	63
4.1	Complete Symmetry Model	63
4.1.1	Symbolic Table	64
4.1.2	Nonstandard Log-Linear Approach in Generating Model	66
4.1.3	Complete Symmetry Model—Nonstandard Log- Linear Specification	66
4.1.4	Properties of Complete Symmetry Model	67
4.1.5	Function Model.Summary	68
4.1.6	A Detailed Illustration—The Dummy Specification	73
4.2	Conditional Symmetry Model	75
4.3	Odds Symmetry Model	79
4.3.1	Relationships of Complete Symmetry, Conditional Symmetry, Odds Symmetry I and II	86

4.4	Diagonal Parameters Symmetry Model	87
4.4.1	Relationships of Complete Symmetry, Conditional Symmetry, and Diagonal Parameters Symmetry Models	90
4.5	Linear Diagonal Parameters Symmetry Model	91
4.6	Quasi Symmetry Model	94
4.6.1	Relationship of Quasi Symmetry, Conditional Symmetry, and Complete Symmetry Models	97
4.7	Quasi Diagonal Parameters Symmetry Model	97
4.7.1	Relationships of Complete Symmetry, Conditional Symmetry, Quasi Symmetry, Diagonal Parameters Symmetry, and Quasi Diagonal Parameters Symmetry Models	102
4.8	The 2-Ratios Parameters Symmetry Model	103
4.8.1	Relationships of Conditional Symmetry, Linear Diagonal Parameters Symmetry, and 2-Ratios Parameters Symmetry Models	107
4.9	Quasi Conditional Symmetry Model	108
4.10	Quasi Odds Symmetry Model	112
4.10.1	Relationships of Quasi Symmetry, Quasi Conditional Symmetry, and Quasi Odds Symmetry Models	116
4.10.2	Relationships of Odds Symmetry I, Odds Symmetry II, and Quasi Odds Symmetry Model	116
	References	119
5	Point Symmetry Models	121
5.1	Complete Point Symmetry Model	121
5.2	Inclined Point Symmetry Model	126
5.3	Quasi Point Symmetry Model	129
5.4	Quasi Inclined Point Symmetry Model	131
5.5	Proportional Point Symmetry Model	135
5.5.1	Comparison of Proportional and Inclined Point Symmetry Model	137
5.6	Local Point Symmetry Model	138
5.7	Reverse Local Point Symmetry Model	140
5.8	Reverse Proportional Point Symmetry Model	142
5.9	Reverse Inclined Point Symmetry Model	145
5.10	Quasi Reverse Inclined Point Symmetry Model	148
5.11	Reverse Conditional Symmetry	151
5.12	Quasi Reverse Conditional Symmetry Model	153
