

Contents

1	Bars	1
1.1	Springs	1
1.2	Springs to Bars	7
1.3	Bar Shape Functions	13
1.4	Bar Elements	16
1.5	Equivalent Nodal Forces From the Skin Force	21
1.6	Equilibrium from virtual work	25
1.7	Transforming stiffness matrices	28
1.8	“Inverting” a Rectangular Matrix	30
1.9	Truss elements	33
1.10	Modal and nodal	38
1.11	Homework Problems	39
	References	41
2	Trusses	43
2.1	Members and Joints	43
2.2	Redundancy	50
2.3	<i>Mathematica</i> Codes	52
2.4	Extentions	60
2.5	Comments on Problems	62
	References	63
3	2-D Llinear Interpolation	65
3.1	Interpolants: “Unit at One Node and Zero at Others”	65
3.2	Shape Functions: <i>Exactly</i> Interpolating Linear Fields	66
3.3	Courant’s Hand Calculation of Torsional Stiffness	71
3.4	Homework Problems	77
3.5	Term Project	78
3.6	Hints	79
	References	79

4	Clough's triangular elements	81
4.1	Stiffness of elements	82
4.2	Triangular Element System	90
4.3	Problems	102
	References	102
5	Taig's Convex Quadrilateral Elements	103
5.1	A Historical Note	105
5.2	Isoparametric	106
5.3	Taig's Interpolants \mathcal{M}_j in the Physical (x, y) Frame	108
5.4	Uncoupling the Vector Displacement Field	111
5.5	Derivation of Field Variables from Interpolants	112
5.6	Exact Integration?	116
5.7	Practice Problems	118
5.8	Term Problems	118
	References	119
6	Irons' <i>Patch Test</i>	121
6.1	<i>Patch Tests</i> for Four-Node Plane Elements	122
6.2	What Is <i>Locking</i>	123
6.3	Modal Interpretation of the <i>Patch Test</i>	125
6.4	Limitation of Conventional "Compatible" Formulations	127
6.5	Reading Assignment	128
6.6	Computer Programming Assignment	129
	References	129
7	Four-Node Elements	131
7.1	Mode-Node	132
7.2	Compressible Element	134
7.3	kModal	141
7.4	Numerics of Stiffness Matrix for Four Node Elements	142
7.5	Krr	144
7.6	SFS	145
7.7	Term Problems	146
7.8	Computer Programming Assignment	146
	References	146
8	Incompressible Plane Strain Elements: <i>Locking-Free</i> in the x and y Directions	147
8.1	<i>Isochoric</i> Displacement Modes	148
8.2	p_o	154
8.3	A Pressure p_o : An Element Degree-of-Freedom	158
8.4	Single element	161
8.5	Prog.	170
8.6	Homework Problems	172

8.7	Term Problems	172
8.8	Programming Problems	172
	References	173
9	Conclusions	175
9.1	Quadrilateral Elements	176
9.2	Five Node Elements	184
9.3	Curved Elements	188
9.4	Variational Crimes?	189
9.5	Designing Elements	193
9.6	Rayleigh–Ritz Procedure with Tensors: <i>Patch on Book Cover</i>	194
9.7	Homework Problems	198
9.8	Term Problems	199
9.9	Hints	201
	References	202
A	Symbolics	205
A.1	Variables	206
A.2	<i>Mathematica</i>	210
A.3	Lists	215
A.4	Substitution	216

Finite Element Concepts

A Closed-Form Algebraic Development

Dasgupta, G.

2018, XXXVI, 333 p. 45 illus., Hardcover

ISBN: 978-1-4939-7421-4
