

Contents

1	Introduction and Perspective	1
1.1	Use of a Book Without Pictures or Conversation?	1
1.2	Oh Dear! Oh Dear! I Shall be Late!	2
1.3	Down the Rabbit Hole	4
1.4	The Loveliest Garden	5
1.5	Caucus-Race—Best Way to Explain it is to do it!	7
1.6	Grin of the Cheshire Cat	8
1.7	Innovations in Each of the Chapters	9
 Part I The Electrochemical Thermal Model		
2	Theoretical Framework of the Electrochemical Model	13
2.1	Introduction	13
2.2	Conservation Equations	15
2.2.1	Mass Conservation in the Electrode (Solid) Regions	16
2.2.2	Mass and Charge Flux from Solution Thermodynamics	16
2.2.3	Mass Conservation in the Electrolyte (Liquid Phase)	18
2.2.4	Charge Conservation in the Electrolyte (Liquid Phase)	22
2.2.5	Charge Conservation in the Electrode (Solid) Region	25
2.3	The Charge Transfer Reaction	26
2.3.1	Nernst Equation: Equilibrium Component and its Thermodynamic Connect	26
2.3.2	Butler–Volmer Equation: The Dynamic Component	29
3	Theoretical Framework of Electrochemical–Thermal Model (ECT)	33
3.1	Energy Balance for Lithium Ion Cells: Lumped Heat Source	33
3.2	Energy Balance for Lithium Ion Cells: Distributed Heat Source	35

3.3	Basics of Nonequilibrium Thermodynamics	36
3.4	The Energy Conservation Equation with Distributed Heat Sources	38
3.5	The Coupled Electrochemical–Thermal Model	40
3.5.1	Thermal Model	40
3.5.2	The Electrochemical Sources of Heat Generation	40
3.5.3	Heat Generation Due to Phase Transition	41
3.5.4	Performance Indicators Computed from the Model	42
4	Key Applications of Electrochemical Theory	45
4.1	Introduction	45
4.2	Validation of Discharge and Charge	47
4.3	Analysis of Different Electrochemical Heat Sources	49
4.4	Effect of Ambient Temperature	50
4.5	Effect of Rate of Discharge	53
4.6	Effect of Heat Transfer Coefficient	55
4.7	Cumulative Heat Generation and Operating Efficiency Calculation	58
4.8	Summary	59
 Part II Reduced Order Models		
5	Theoretical Framework of the Reduced Order Models (ROM)	63
5.1	Introduction	63
5.2	Solid Phase Mass Balance Equations: A Single Sphere	66
5.2.1	The Diffusion Equation in Radial Coordinates and the Volume Averaged Version	66
5.2.2	Profile Approximations	67
5.2.3	Building the Battery Model	69
5.2.4	Butler–Volmer Kinetics	69
5.3	Solid Phase Current Balance Equations	71
5.3.1	Field Equations	71
5.3.2	Negative and Positive Electrode Regions	71
5.3.3	Revisiting the Battery Model	72
5.3.4	Insights from the Reduced Order Model	73
5.3.5	Electrode Potential Drop	74
5.3.6	Voltage Due to Electronic Conduction	75
5.4	Treatment of the Electrolyte Potential	76
5.4.1	Simple Linear and Nonlinear Approaches	76
5.4.2	Volume Averaging the Electrolyte Mass Balance Equation	77
5.5	Electrolyte Potential Field	86
5.5.1	Field Equations	86
5.5.2	Revisiting the Battery Model	90

5.6	Developments to the Base ROM	93
5.6.1	Thermal Balance	93
5.6.2	Coupling of Electrochemical and Thermal Models	96
5.6.3	Degradation: Cycling Studies	97
5.6.4	Phase Change	99
5.7	Summary of the ROM	101
6	Key Applications of ROM	105
6.1	Introduction	105
6.2	Representation of Experimental and Drive Cycle Data	106
6.2.1	Details of Experiments	106
6.2.2	Validation with CC Data	106
6.2.3	Representation of Drive Cycle Data	107
6.2.4	Time Taken	110
6.3	Parametric Sensitivity Analysis	111
6.3.1	Contribution to the Total Heat Release	111
6.3.2	Effect of Ambient Temperature	112
6.3.3	Effect of Rate	114
6.3.4	Effect of Heat Transfer Coefficient	116
6.4	Representation of Phase Change Electrodes	118
6.4.1	Reduced Order Model for Phase Change System	118
6.4.2	Reduced Order Model for Phase Change System with Degradation	119
6.4.3	Charge–Discharge Asymmetry	121
6.4.4	Path Dependence	122
6.5	Summary	124
Part III State and Health Estimation		
7	Theoretical Framework for State Estimation	129
7.1	Introduction	129
7.2	Bayes Theorem	130
7.3	Recursive Bayesian Framework	133
7.3.1	Kalman Filter	136
7.3.2	Extended Kalman Filter	138
7.3.3	Unscented Kalman Filter	140
7.3.4	Particle Filter	141
8	Theoretical Framework for Health Estimation Using Machine Learning	145
8.1	Introduction	145
8.2	Primer on Machine Learning Algorithms	146
8.2.1	Machine Learning for Regression	147
8.2.2	Machine Learning for Classification	149
8.2.3	Gradient Descent Algorithm	150
8.3	Artificial Neural Network	154

8.4	Support Vector Machine	158
8.5	Gaussian Process Emulator	160
8.6	Recent Advances: Deep Learning Algorithms.	165
9	Key Applications of State and Health Estimation	175
9.1	Li-Ion Battery State Estimation Using the Recursive Bayesian Filter	176
9.2	State of Health Estimation Using Machine Learning	190
9.2.1	Case 1: Multiple Battery Data	192
9.2.2	Prognostic Horizon of Multistep Approach	197
9.2.3	Case 2: Single Battery Data	198
9.2.4	Case 3: Two Batteries at Various Temperatures.	200
9.2.5	Case 4, 5: Multi-battery Data at High and Low Temperatures (HT/LT)	200
9.2.6	Case 6: All Battery Data	202
9.3	Summary	203
	References	205
	Index	209

Mathematical Modeling of Lithium Batteries
From Electrochemical Models to State Estimator
Algorithms

Hariharan, K.S.; Tagade, P.; Ramachandran, S.

2018, XIV, 211 p. 73 illus., 34 illus. in color., Hardcover

ISBN: 978-3-319-03526-0
