

Contents

1	Introduction: Elementary Concepts	1
1.1	Materials Properties	1
1.2	Knowledge and Use of Materials	2
1.3	The Main Class of Materials	2
1.4	Experimental Methods: Types of Tests	2
1.4.1	The Tensile Test	3
1.4.2	Creep Test	4
1.4.3	Relaxation Test	4
1.4.4	Different Possible Mechanical Tests	4
1.5	Behavior Models	5
1.6	Formulation and Choice of Behavior Models	6
1.6.1	Formulation of Behavior Models	6
1.6.2	Choice of Behavior Models	6
2	Thermodynamics Framework for Modeling Solid Materials	9
2.1	Introduction	9
2.2	Concept of Deformation (or Strain), Kinematical Study of Continuum Media	10
2.2.1	Vectorial Displacement Notion $\vec{u}(\overrightarrow{O_0M_0}, t)$	10
2.2.2	Notion of Body “Deformability”	11
2.2.3	Definition of Finite Transformations	12
2.2.4	Additive Decomposition: Strain Tensors and Rotation Tensors	13
2.2.5	Intrinsic Properties of Symmetrical Second-Order Tensor	18
2.2.6	Exercise 2.3	21
2.3	Stress Concept	22
2.3.1	Inventory of Possible External Mechanical Loadings	22
2.3.2	Introduction of the Stress Concept	24

2.4	Conservation Laws	28
2.4.1	Concept of a Material System (Fig. 2.17)	28
2.4.2	Concept of a Particulate Derivative	29
2.4.3	Mass Balance	30
2.4.4	Equation of Motion	31
2.4.5	Energy Balance: First Thermodynamics Law	31
2.4.6	Entropy Variation: Second Law of Thermodynamic	32
2.5	Behavior Laws	33
2.5.1	Clausius–Duhem Inequality	34
2.6	Heat Equation	37
2.7	Synthesis and Chapter Conclusion	38
3	Linear Elastic Behavior, Thermoelasticity	39
3.1	Introduction	39
3.2	Linear Elastostaticity Isotropic and Homogeneous	39
3.2.1	General Equations Applied to Linear Elastic Isotropic Behavior	43
3.2.2	Exercise 3.1	44
3.2.3	Exercise 3.2	47
3.2.4	Exercise 3.2 Bis	49
3.3	Plane Linear Elasticity	50
3.3.1	Airy Function (or Stress Function)	52
3.3.2	Exercise 3.3	53
3.3.3	Exercise 3.4	56
3.4	Linear Isotropic Thermoelasticity	59
3.4.1	Exercise 3.5	60
3.5	Elastic Linear and Anisotropic Mediums	62
3.5.1	Behavior Laws	62
3.5.2	Unidirectional Composites with Long Fibers	65
3.5.3	Expression of the Elastic Constants in a Reference Frame Linked to the Geometry of the Structure	67
3.5.4	Exercises 3.6 et 3.7	70
3.5.5	Theory of Laminates	71
3.5.6	Exercise 3.8 on Laminated Media	76
4	Yield Elasticity Criteria	79
4.1	Introduction and Tools	79
4.2	Criteria Integrating the Independence from Hydrostatic Pressure of the Mechanical Behavior of the Material	80
4.2.1	Exercise 4.1	81
4.2.2	Exercise 4.2: Comparison of Tresca Criteria and Huber-von Mises Criteria for Tension–Torsion and Biaxial Tension Tests (Fig. 4.2)	82
4.3	Criteria Involving Hydrostatic Pressure	83
4.3.1	Drucker–Prager Criterion	84

4.3.2	Mohr–Coulomb Criterion	84
4.3.3	Gurson Criterion for the Porous Materials Behavior . . .	85
4.3.4	Criteria Integrating the Second and the Third Deviatoric Stress Invariants.	85
4.4	Exercise 4.3	86
4.5	Criteria Integrating the Three Invariants of the Stress Tensor I_1, J , and J_3	88
4.6	Anisotropic Criteria	88
4.7	Conclusion	89
5	Multiaxial Plasticity	91
5.1	Introduction	91
5.2	Uniaxial Plasticity	93
5.2.1	Elastic Perfectly Plastic Model	93
5.2.2	Prager Model	95
5.3	Tridimensional Plasticity	96
5.3.1	Introduction	96
5.3.2	Example of Perfect Elastoplastic Problem (Exercise 5.1)	97
5.4	Three-Dimensional Elasto-Plasticity (in “Small Perturbations”)	100
5.4.1	Elasto-Plasticity Working Hypotheses (Maugin 1992)	100
5.4.2	Reminder of the Thermomechanical Formulation	100
5.4.3	Direction of Flow Associated with Conventional and Less Common Criteria	102
5.4.4	Prandtl–Reuss Law (Besson et al. 2001).	104
5.4.5	Proportional Loading Cases: Hencky–Mises Law (Besson et al. 2001)	106
5.4.6	Exercise 5.2: Traction-Torsion of a Thin Tube for Isotropic Plasticity	107
5.5	Isotropic and Kinematical Hardenings	111
5.5.1	Case of Variable Temperature (Burlet et al. 1988) . . .	113
5.5.2	Summary of a Model Superimposing Kinematical and Isotropic Hardenings	113
5.5.3	Inversion of Plasticity Relations	114
5.5.4	Exercise 5.3	114
5.5.5	Exercise 5.4 (Burlet et al. 1988).	114
5.6	Conclusion	116
6	Viscoelasticity	117
6.1	Introduction	117
6.2	Viscoelasticity 1D (Pattofatto 2009).	117
6.2.1	Kelvin–Voigt Model	118
6.2.2	Maxwell Model	121

6.2.3	Zener Model:	123
6.2.4	The Generalized Maxwell Model	125
7	Viscoplasticity	129
7.1	Creep Mechanisms.	129
7.1.1	Ashby Deformation Maps.	129
7.1.2	Stress and Temperature Effects	129
7.1.3	Creep Description (Phenomenological Models).	133
7.2	Exercise 7.1: Steady Creep of an Fe–Cr–Al Alloy for Metal Catalytic Converters	134
7.3	General Form of the Viscoplastic Constitutive Equation (Chaboche 2008)	136
7.3.1	Viscosity Function Choice	138
7.3.2	Isotropic Hardening Equations	138
7.3.3	Kinematic Hardening Equations	139
7.3.4	Hardening equations in viscoplasticity	139
7.4	Exercise: Viscoplastic Behavior Predicted by a Rheological Model.	140
7.5	Exercise 7.3: Viscoplastic Flow for Plane Strains (in the Annals pp 195–199 of Cailletaud et al. 2011)	142
7.5.1	Tresca Criterion	145
7.6	Viscoplasticity Unified Constitutive Models.	146
7.6.1	Viscoplasticity Flow Laws:.	146
7.6.2	Internal Variables Kinetic Equations.	148
7.6.3	Other Types of Modeling	148
7.7	Comparison Between “Plasticity” and “Viscoplasticity”.	149
7.7.1	The Threshold Representing the Elastic Range f	149
7.7.2	Behavior Models.	150
8	The Shape-Memory Alloys	153
8.1	Some General Points About SMAs	153
8.1.1	Introduction	153
8.1.2	Why Are SMAs of Interest for Industry?	154
8.1.3	Crystallographic Theory of Martensitic Transformation	155
8.2	The World of Shape-Memory Alloys.	157
8.2.1	Introduction and General Points	157
8.2.2	Basic Metallurgy of SMAs, by Michel Morin.	158
8.2.3	Measurement of phase transformation temperatures	158
8.2.4	Self-accommodating Martensite and Stress-Induced Martensite.	159
8.2.5	Functional Properties of SMAs.	160
8.3	Macroscopic Models with Internal Variables	164
8.3.1	Introduction	164

8.4	R_L Model	166
8.4.1	Reversible R Model	167
8.4.2	R_L Model with a Hysteresis Loop (Muller 1989)	169
8.4.3	Extension to Reversible Phase Transformation: Austenite $\Rightarrow R$ phase for NiTi (Lexcellent et al. 1994).	173
8.4.4	Multiaxial Isothermal Behavior.	175
8.5	Anisothermal Expansion	179
8.5.1	Kinetics of Phase Transformation or Reorientation	182
8.5.2	Criticism of the R_L approach	186
8.6	Design of SMAs Elements	187
8.6.1	Introduction	187
8.6.2	“Strength of Materials”-Type Calculations for Beams Subject to Bending or Torsion (Rejzner and Lexcellent 1999)	188
8.7	Case Studies.	194
8.7.1	Study of the Flexion of a Prismatic Bar Subjected to a Punctual Force.	194
8.7.2	Slender Tube Subjected to Twisting Torques	196
8.7.3	Study of a “Parallel” Hybrid Structure	197
8.7.4	Study of a “Series” Hybrid Structure	199
9	Behavior of Magnetic Shape Memory Alloys	201
9.1	Introduction	201
9.2	Cristallographie du Ni-Mn-Ga	202
9.2.1	Calculations of Microstructures.	203
9.3	Model of the Magneto-Thermo-Mechanical Behavior of a Monocrystal of Magnetic Shape-Memory Alloy	206
9.3.1	Expression of the Gibbs Free Energy Associated with Magneto-Thermo-Mechanical Loading	206
9.3.2	Choice of the Representative Elementary Volume	207
9.3.3	Expression of Chemical Energy	208
9.3.4	Expression of Thermal Energy	209
9.3.5	Expression of Mechanical Energy.	209
9.3.6	Expression of Magnetic Energy	210
9.3.7	General Expression of the Free Energy.	212
9.4	Applications.	213
9.4.1	Confrontation Modeling-Experience	213
9.4.2	Application: Creation of a «Push/Pull» Actuator.	215
9.5	Conclusion	216
10	Mechanical Elements of Fracture and Damage	217
10.1	Introduction	217
10.2	Stress Intensity Factor	218
10.2.1	Plane Elasticity	218
10.2.2	Antiplane Elasticity.	219

10.2.3	Stress Singularity in Mode I and II (Fig. 10.1)	219
10.2.4	Stress Singularity in Mode III.	224
10.2.5	Theory of Irwin for Mode I	225
10.2.6	Example of Application: Selection of a Pressure Vessel Steel	226
10.3	Energetic Theory of Fracture	228
10.3.1	Original Reasoning of Griffith (1920)	228
10.3.2	Improved Griffith Model.	229
10.3.3	Various Expressions of G : Equivalence of Theories of Griffith and Irwin	229
10.3.4	Rice Integral	231
10.3.5	Analytical Application of Rice Integral.	232
10.3.6	Some Exercises Among the 120 of the Book by Guy Pluvinage.	233
10.4	Damage	236
10.4.1	Introduction	236
10.4.2	Scope and Employment	236
10.4.3	Phenomenological Aspects	237
10.4.4	Damage Variable	237
10.4.5	Basic Laws of Damage.	244
10.4.6	Thermodynamic Formulation of Damage	248
	Bibliography	251
	Index	257

Linear and Non-linear Mechanical Behavior of Solid
Materials

Lexcellent, C.

2018, XV, 259 p. 155 illus., Hardcover

ISBN: 978-3-319-55608-6
