

Contents

- 1 Introduction 1**
 - 1.1 Motivations 1
 - 1.1.1 Wireless Networks: Trends and Challenges 1
 - 1.1.2 VWN: Requirements 3
 - 1.1.3 VWN: User-Association and Resource-Allocation Issues... 4
 - 1.2 Emerging Technologies: A Brief Overview 5
 - 1.2.1 User-Association and Resource-Allocation 5
 - 1.2.2 Cloud-Radio Access Network (C-RAN) 6
 - 1.2.3 Massive MIMO 7
 - 1.2.4 Non-orthogonal Multiple Access (NOMA) 8
 - 1.3 Structure of This Brief 9
 - References 10
- 2 Bandwidth-Efficient Joint User-Association and Resource-Allocation in Multi-Cell VWN 13**
 - 2.1 Introduction 13
 - 2.2 System Model and Problem Formulation 15
 - 2.3 Proposed Two-Level Iterative Algorithm..... 17
 - 2.3.1 User-Association Problem 18
 - 2.3.2 Power-Allocation Problem 22
 - 2.4 Numerical Results and Discussions 24
 - 2.4.1 System Parameters 24
 - 2.4.2 Reference Resource Allocation 24
 - 2.4.3 Total Rate and Rate-Outage Evaluation 25
 - 2.4.4 Coverage Analysis 27
 - 2.4.5 Optimality Gap Study 32
 - 2.4.6 Computational Complexity and Convergence Analysis 32
 - 2.5 Concluding Remarks 33
 - References 35

3	Power-Efficient Joint User-Association and Resource-Allocation in Multi-Cell VWN	37
3.1	Introduction	37
3.2	System Model and Problem Formulation	38
3.3	Proposed Algorithm	40
3.3.1	User-Association Problem	40
3.3.2	Power Minimization Problem	43
3.4	Numerical Results and Discussions	44
3.5	Concluding Remarks	46
	References	47
4	Uplink Resource-Allocation in VWN with Massive-MIMO and Dynamic Pilot-Duration	49
4.1	Introduction	49
4.2	System Model and Problem Formulation	50
4.3	Iterative Algorithm for Joint Resource and Adaptive Pilot Duration Allocation	55
4.4	Numerical Results and Discussions	58
4.5	Concluding Remarks	61
	References	61
5	User-Association and Resource-Allocation in a C-RAN-Based VWN	63
5.1	Introduction	63
5.2	System Model	65
5.3	Proposed Two-Level Iterative Algorithm	70
5.3.1	Association Algorithm	70
5.3.2	RRH Adjusting Algorithm	74
5.4	Numerical Results and Discussions	77
5.4.1	System Parameters	77
5.4.2	Performance Analysis	77
5.5	Concluding Remarks	80
	References	81
6	Resource Allocation in a NOMA-Based VWN	83
6.1	Introduction	83
6.2	System Model	84
6.2.1	NOMA	85
6.2.2	OFDMA	86
6.3	Proposed Algorithm	87
6.3.1	Iterative Algorithm for NOMA-Based Resource Allocation	88
6.3.2	Dual Approach for OFDMA-Based Resource Allocation	89
6.4	Numerical Results and Discussions	91
6.5	Concluding Remarks	94
	References	94

7 Conclusion	95
7.1 Summary	95
7.2 Potential Future Works	96
Appendix Brief Notes on Geometric Programming and Successive Convex Approximation	99
A.1 Introduction to Geometric Programming	99
A.1.1 Monomial and Posynomial Function	99
A.1.2 Arithmetic-Geometric Mean Approximation	99
A.1.3 Geometric Programming	100
A.1.4 Complementary Geometric Programming	100
A.2 Multi-Block Successive Convex Approximation	102
References	103

Virtualized Wireless Networks

User Association and Resource Allocation

Le-Ngoc, T.; Dawadi, R.; Parsaeefard, S.; Derakhshani,
M.
