

Contents

1	Sampling and Reconstruction of Signals	1
1.1	Sampling of Sinusoidal Signal	1
1.2	Fourier Series (FS)	11
1.2.1	Dirichlet Conditions	12
1.3	Fourier Transformation (FT)	12
1.4	Discrete Time Fourier Transformation (DTFT) and Sampling Theorem	13
1.5	Discrete Fourier Transformation (DFT) (Sampling the Frequency Domain)	18
1.5.1	Vector Space Interpretation of DFT	20
1.5.2	Fast Fourier Transformation	21
1.5.3	Sub-band Discrete Fourier Transformation	25
1.6	Continuous System	27
1.7	Laplace Transformation (s-Transformation)	30
1.7.1	Properties of the ROC of the Laplace Transformation for the Right Sided Sequence	30
1.7.2	Inverse Laplace Transformation	31
1.8	Geometrical Interpretation of Computation of Magnitude Response of the Filter Using Pole-Zero Plot of s-Transformation	32
1.9	Discrete System	32
1.10	Z-Transformation	35
1.10.1	Properties of the ROC of the Z-Transformation for the Right-Sided Sequence	35
1.10.2	Inverse Z-Transformation	36
1.11	Response of the Digital Filter with the Typical Transfer Function (Obtained Using DTFT) to the Periodic Sequence	37
1.12	Geometrical Interpretation of Computation of Magnitude Response of the Filter Using Pole-Zero Plot of z-Transformation	40

2	Infinite Impulse Response (IIR) Filter	43
2.1	Impulse-Invariant Mapping	43
2.2	Bilinear Transformation Mapping	44
2.2.1	Frequency Pre-warping	45
2.2.2	Design of Digital IIR Filter using Butterworth Analog Filter and Impulse-Invariant Transformation	47
2.2.3	Design of Digital IIR Filter using Butterworth Analog Filter and Bilinear Transformation	47
2.2.4	Design of Digital IIR Filter Using Chebyshev Analog Filter and Impulse-Invariant Transformation	49
2.2.5	Design of Digital IIR Filter Using Chebyshev Analog Filter and Bilinear Transformation	49
2.2.6	Comments on Fig. 2.7 and Fig. 2.8	58
2.2.7	Design of High-Pass, Bandpass, and Band-Reject IIR Filter	59
2.3	Realization	72
2.3.1	Direct Form 1	72
2.3.2	Direct Form 2	72
2.3.3	Illustration	73
3	Finite Impulse Response Filter (FIR Filter)	77
3.1	Demonstration of Four Types of FIR Filter	78
3.2	Design of Linear Phase FIR Filter-Windowing Technique	90
3.2.1	Design of Low-Pass Filter	90
3.2.2	Design of High-Pass Filter	97
3.2.3	Design of Band Pass and Band Reject Filter	97
3.2.4	Windows Used to Circumvent Ripples in the Magnitude Response	105
3.3	FIR Filters that Have Identical Magnitude Response	113
4	Multirate Digital Signal Processing	121
4.1	Sampling Rate Conversion by the Factor $\frac{M}{N}$	121
4.1.1	Upsampling (with $N = 1$)	121
4.1.2	Downsampling (with $M = 1$)	122
4.1.3	Comments on the Fig. 4.1	123
4.2	Poly-phase Realization of the Filter for Interpolation	125
4.3	Poly-phase Realization of the Filter for Decimation	130
4.4	Quadrature Mirror Filter	137
4.5	Transmultiplexer	142
5	Statistical Signal Processing	147
5.1	Introduction to Random Process	147
5.1.1	Illustration on W.S.S.R.P and Nonstationary Random Process	147

5.2	Auto Regressive (AR), Moving Average (MA) and Auto Regressive Moving Average (ARMA) Modeling	150
5.2.1	Linear Prediction Model	151
5.3	Adaptive Filter	157
5.3.1	System Model	157
5.3.2	Filtering Noise	163
5.4	Spectral Estimation	166
5.4.1	Eigen Decomposition Method for Spectral Estimation	166
5.4.2	Pisarenko Harmonic Decomposition	168
5.4.3	MUSIC (Multiple Signal Classification) Method	169
5.4.4	ESPRIT (Estimation of Signal Parameters Via Rotational Invariance Technique)	170
6	Selected Applications in Multidisciplinary Domain	177
6.1	Multipath Transmission in Wireless Communication	177
6.2	Cyclic Prefix in Orthogonal Frequency Division Multiplexing (OFDM)	180
6.3	Projection Slice Theorem for Computed Tomography Imaging	182
6.4	Warped Discrete Fourier Transformation for Speech Signal	185
6.5	Nonuniform Discrete Fourier Transformation for the Compressive Sensing Applications	187
6.6	Nonuniform Sampling of Real Data in Multidisciplinary Applications-Linear Model for Regression	187
6.6.1	Maximum Likelihood Estimation	188
6.6.2	Least Square Estimation	189
6.6.3	Bayes Estimation	190
6.6.4	Kernel Smoothing Function for Regression	191
	List of m-files	195
	Index	199

Multi-Disciplinary Digital Signal Processing

A Functional Approach Using Matlab

Gopi, E.S.

2018, XI, 200 p. 116 illus., 57 illus. in color., Hardcover

ISBN: 978-3-319-57429-5
