

Contents

1	Introduction	1
1.1	Overview of Supply Chain Disruption Management	1
1.2	Value-at-Risk Versus Conditional Value-at-Risk	3
1.3	Local, Regional and Global Disruptions.	6
1.4	Two-level Versus Multi-level Disruptions	8
1.5	Risk-Neutral, Risk-Averse and Mean-Risk Decision-Making	9
 Part I Selection of Supply Portfolio		
2	Selection of Static Supply Portfolio	15
2.1	Introduction	15
2.2	Problem Description.	17
2.3	Models for Risk-Neutral Decision-Making.	18
2.4	Models for Risk-Averse Decision-Making	22
2.5	Models for Mean-Risk Decision-Making	24
2.6	Computational Examples	25
2.6.1	Single-Region Sourcing	26
2.6.2	Multi-region Sourcing.	34
2.7	Notes	38
	Problems	40
3	Selection of Dynamic Supply Portfolio	43
3.1	Introduction	43
3.2	Problem Description.	44
3.3	Models for Risk-Neutral Decision-Making.	46
3.3.1	Dynamic Supply Portfolio for All-or-Nothing Delivery Scenarios	51
3.4	Models for Risk-Averse Decision-Making	51
3.5	Models for Mean-Risk Decision-Making	53
3.6	Computational Examples	54
3.6.1	Worst-case Scenarios with Longest Delays and Disruptions.	60

3.7	Notes	66
	Problems	67
4	Selection of Resilient Supply Portfolio	69
4.1	Introduction	69
4.2	Problem Description: Single-Level Protection	70
4.3	Resilient Supply Portfolio with Single-Level Protection	73
4.3.1	Model for Risk-Neutral Decision-Making	74
4.3.2	Model for Risk-Averse Decision-Making	77
4.3.3	Model for Mean-Risk Decision-Making	78
4.4	Protection Index	79
4.5	Resilient Supply Portfolio with Multi-Level Protection	80
4.6	Computational Examples	84
4.6.1	Single-Level Protection	85
4.6.2	Multi-level Protection	93
4.7	Notes	97
	Problems	99
 Part II Integrated Selection of Supply Portfolio and Scheduling		
5	Integrated Selection of Supply Portfolio and Scheduling of Production	103
5.1	Introduction	103
5.2	Problem Description	104
5.3	Models for Risk-Neutral Decision-Making	108
5.3.1	Minimization of Cost	108
5.3.2	Maximization of Customer Service Level	113
5.4	Models for Risk-Averse Decision-Making	114
5.4.1	Minimization of Cost	115
5.4.2	Maximization of Customer Service Level	116
5.5	Model for Mixed Mean-Risk Decision-Making	118
5.6	Computational Examples	120
5.6.1	Single Versus Dual Sourcing	120
5.6.2	Single Versus Multiple Sourcing	129
5.6.3	Order Versus Demand Fulfillment Rate	137
5.6.4	Conditional Service-At Risk Versus Expected Cost ..	141
5.7	Notes	145
	Problems	146
6	Integrated Selection of Supply Portfolio and Scheduling of Production and Distribution	149
6.1	Introduction	149
6.2	Problem Description	150
6.3	Models for Risk-Neutral Decision-Making	153
6.3.1	Scheduling with Single Batch Shipping	154

6.3.2	Scheduling with Individual and Immediate Shipping	158
6.3.3	Scheduling with Multiple Batch Shipping and Limited Transportation Capacity	159
6.4	Models for Risk-Averse Decision-Making	160
6.5	Expected Value Problem	163
6.6	Computational Examples	165
6.6.1	Risk-Neutral Decision-Making	167
6.6.2	Risk-Averse Decision-Making	178
6.6.3	Expected Value - Based Decision-Making	180
6.7	Notes	182
	Problems	184

Part III Equitably Efficient Selection of Supply Portfolio and Scheduling

7	A Fair Decision-Making Under Disruption Risks	189
7.1	Introduction	189
7.2	The Lexicographic Minimax Optimization and Equitable Aggregation	190
7.3	Problem Description.	193
7.4	Problem Formulation	195
7.4.1	Minimum and Maximum Values of the Objective Functions	198
7.4.2	Model Limitations and Possible Enhancements.	199
7.5	Computational Examples	201
7.6	Notes	208
	Problems	209
8	A Robust Decision-Making Under Disruption Risks	211
8.1	Introduction	211
8.2	Problem Description.	212
8.3	Problem Formulation	214
8.3.1	Equitable Minimization of Average and Worst-Case Costs.	215
8.3.2	Equitable Maximization of Average and Worst-Case Service Level	217
8.3.3	Minimum and Maximum Values of the Objective Functions	219
8.4	Computational Examples	222
8.5	Notes	235
	Problems	236

**Part IV Selection of Primary and Recovery Portfolios
and Scheduling**

9 Selection of Primary and Recovery Supply Portfolios and Scheduling	239
9.1 Introduction	239
9.2 Problem Description.	240
9.3 Models for Risk-Neutral Decision-Making.	243
9.3.1 Integrated Selection of Primary and Recovery Supply Portfolios	243
9.3.2 Multiple Part Types and Product Types	248
9.3.3 Hierarchical Selection of Primary and Recovery Supply Portfolios	249
9.4 Models for Risk-Averse Decision-Making	252
9.5 Computational Examples	254
9.5.1 Risk-Neutral Decision-Making	256
9.5.2 Risk-Averse Decision-Making	266
9.6 Notes	268
Problems	270
10 Selection of Primary and Recovery Supply and Demand Portfolios and Scheduling.	271
10.1 Introduction	271
10.2 Problem Description.	272
10.3 Models for Risk-Neutral Decision-Making.	276
10.3.1 Integrated Selection of Primary and Recovery Supply and Demand Portfolios	276
10.3.2 Multiple Part Types and Product Types	281
10.3.3 Hierarchical Selection of Primary and Recovery Supply and Demand Portfolios	284
10.4 Models for Risk-Averse Decision-Making	290
10.4.1 Integrated Approach	290
10.4.2 Hierarchical Approach	291
10.5 Computational Examples	292
10.5.1 Risk-Neutral Decision-Making	294
10.5.2 Risk-Averse Decision-Making	304
10.6 Notes	310
Problems	311

Part V Information Flow Disruption Management

11 Selection of Cybersecurity Safeguards Portfolio.	315
11.1 Introduction	315
11.2 Problem Description.	316

11.3	Models for Risk-Neutral Decision-Making.	318
11.3.1	Nonlinear Model for Risk-Neutral Decision-Making. . .	318
11.3.2	Linear Model for Risk-Neutral Decision-Making	320
11.4	Model for Risk-Averse Decision-Making.	323
11.5	Models for Mean-Risk Decision-Making	324
11.6	Computational Examples	325
11.7	Notes	333
	Problems	335
	References.	337
	Index	345

Supply Chain Disruption Management Using Stochastic
Mixed Integer Programming

Sawik, T.

2018, XXX, 349 p. 61 illus., 57 illus. in color., Hardcover
