1	Introduction	1
2	Nonlinear Oscillators	5
2.1	Physical Models	6
2.2	Mathematical Models	8
	References	11
3	Pure Nonlinear Oscillator	17
3.1	Qualitative Analysis	18
3.1.1	Exact Period of Vibration	21
3.2	Exact Periodical Solution	23
3.2.1	Linear Case	25
3.2.2	Odd Quadratic Nonlinearity	25
3.2.3	Cubic Nonlinearity	26
3.3	Adopted Lindstedt–Poincaré Method	28
3.4	Modified Lindstedt–Poincaré Method	31
3.4.1	Comparison of the LP and MLP Methods	32
3.4.2	Conclusion	33
3.5	Exact Amplitude, Period and Velocity Method	34
3.6	Solution in the Form of Jacobi Elliptic Function	35
3.6.1	Example	38
3.7	Solution in the Form of a Trigonometric Function	39
3.7.1	Example	40
3.7.2	Conclusion	41
3.8	Pure Nonlinear Oscillator with Linear Damping	42
3.8.1	Parameter Analysis	45
3.8.2	Conclusion	47
	References	48

4 Free Vibrations	51
4.1 Homotopy-Perturbation Technique	53
4.1.1 Duffing Oscillator with a Quadratic Term	56
4.1.2 Conclusion	58
4.2 Averaging Solution Procedure	59
4.2.1 Solution in the Form of an Ateb Function	60
4.2.2 Solution in the Form of the Jacobi Elliptic Function	67
4.2.3 Solution in the Form of a Trigonometric Function	73
4.2.4 Conclusion	78
4.3 Hamiltonian Approach Solution Procedure	78
4.3.1 Approximate Frequency of Vibration	79
4.3.2 Error Estimation	82
4.3.3 Comparison Between Approximate and Exact Solutions	83
4.3.4 Conclusions	90
4.4 Oscillator with Linear Damping	91
4.4.1 Van der Pol Oscillator	93
4.4.2 Conclusion	97
4.5 Oscillators with Odd and Even Quadratic Nonlinearity	97
4.5.1 Qualitative Analysis	99
4.5.2 Exact Solution for the Asymmetric Oscillator	102
4.5.3 Solution for the Symmetric Oscillator	104
4.5.4 Oscillations in an Optomechanical System	110
4.5.5 Conclusion	113
References	114
5 Oscillators with the Time Variable Parameters	119
5.1 Oscillators with Slow Time Variable Parameters	120
5.2 Solution in the Form of the Ateb Function	120
5.2.1 Oscillator with Linear Time Variable Parameter	123
5.3 Solution in the Form of a Trigonometric Function	125
5.3.1 Linear Oscillator with Time Variable Parameters	127
5.3.2 Non-integer Order Nonlinear Oscillator	127
5.3.3 Levi-Civita Oscillator with a Small Damping	128
5.3.4 Conclusion	132
5.4 Solution in the Form of a Jacobi Elliptic Function	133
5.4.1 Van der Pol Oscillator with Time Variable Mass	135
5.4.2 Conclusion	142
5.5 Parametrically Excited Strong Nonlinear Oscillator	143
5.5.1 Solution Procedure	145
5.5.2 Numerical Simulation	154
5.5.3 Conclusion	156
References	156

6	Forced Vibrations	159
6.1	Oscillator with Constant Excitation Force	160
6.1.1	Solution of the Odd-Integer Order Oscillator	163
6.1.2	The Oscillator with Additional Small Nonlinearity	166
6.1.3	Examples	169
6.1.4	Conclusion	172
6.2	Harmonically Excited Pure Nonlinear Oscillator	173
6.2.1	Pure Odd-Order Nonlinear Oscillator	174
6.2.2	Bifurcation in the Oscillator	177
6.2.3	Harmonically Forced Pure Cubic Oscillator	179
6.2.4	Numerical Simulation and Discussion	185
6.2.5	Conclusion	190
6.3	Forced Vibrations of the Pure Nonlinear Oscillator	191
6.3.1	Design of Excitation and Derivation of Amplitude-Frequency Equation	191
6.3.2	Special Cases	193
	References	196
7	Two-Degree-of-Freedom Oscillator	197
7.1	System with Nonlinear Viscoelastic Connection	198
7.1.1	Model with Strong Nonlinear Viscoelastic Connection	198
7.1.2	Solution Procedure	200
7.1.3	Pure Nonlinear Viscoelastic Connection	204
7.1.4	Special Case	208
7.1.5	'Steady-State' Solution	208
7.1.6	Mechanical Vibration of the Vocal Cord	211
7.1.7	Conclusions	216
7.2	System with Nonlinear Elastic Connection	217
7.3	Two-degree-of-freedom Van der Pol Oscillator	219
7.3.1	Transient Motion	221
7.3.2	Steady State Motion	222
7.3.3	Examples	223
7.3.4	Conclusion	227
7.4	Complex-Valued Differential Equation	228
7.4.1	Adopted Krylov–Bogolubov Method	229
7.4.2	Method Based on the First Integrals	231
7.4.3	Conclusion	242
