

Contents

1	Introduction	1
1.1	Historical Evolution of Electrocardiography	1
1.2	Motivation and Goals	3
1.3	ECG Basics	5
1.4	Differential Lead	8
1.5	Book Summary by Chapters	11
	References	12
2	From Multichannel ECG to Wireless Body Sensors	13
2.1	Multichannel ECG	13
2.2	Body Surface Maps	16
2.3	Wireless Body Sensor	18
2.3.1	Prerequisites for Body Sensor Design	18
2.3.2	Positioning of an ECG Body Sensor	20
2.3.3	Multiple Body Sensors	25
2.4	Multi-functionality of Body Sensors	26
2.4.1	Muscular Activity	27
2.4.2	Respiration Derived from ECG	29
2.4.3	Activity Detection	30
2.4.4	Data Fusion for More reliable diagnoses	31
	References	33
3	Software for an mHealth System	37
3.1	Hardware Infrastructure	37
3.2	Software	39
3.3	mHealth Requirements	39
3.3.1	Healthcare Requirements	40
3.3.2	Smartphone Application	40
3.4	An Example of an ECG Monitoring System	43
3.5	Smartphone Application Challenges	44
3.5.1	Transmission of Measured Data to the Smartphone	46
3.5.2	Synchronization of Clocks	46

3.5.3	Storage of Measurements	47
3.5.4	Detection of Heartbeats	49
3.6	Example Algorithms	51
3.6.1	Filtering	52
3.6.2	Extrema Extraction	53
3.6.3	Spike Likelihood Estimation	53
3.6.4	Peak Detection	54
3.6.5	Noise Estimator	55
3.6.6	Heart Rate Calculation	56
	References	58
4	ECG Pilot Studies	61
4.1	Motivation	61
4.2	Atrial Fibrillation After Cardiac Surgery—A Study at the University Medical Centre Ljubljana	62
4.2.1	Participation in the Study	63
4.2.2	Procedures	63
4.3	Heart Rhythm Screening—A Study at the Community Health Centre Ljubljana	63
4.3.1	Participation in the Study	64
4.3.2	Procedures	64
4.3.3	Simulation Center	65
4.4	Visual Examination of the ECG Recordings	65
4.5	Long-Term ECG Data and New Knowledge	67
4.6	Sensor ECG Examples	68
4.6.1	Extranodal Pacemakers	68
4.6.2	Atrio-Ventricular Block in an Athlete During Sleep	70
4.6.3	Atrial Flutter During a 20-Day ECG Measurement	72
	References	74
5	Lead Theory of Differential Leads and Synthesis of the Standard 12-Lead ECG	77
5.1	Preconditions	77
5.2	Dipole as a Volume Source Model	78
5.3	Lead Vector	80
5.3.1	The Burger's Equation	82
5.3.2	Deriving the Lead Vectors from a Known Heart Vector	84
5.3.3	Deriving the Heart Vector from Known Lead Vectors	84
5.4	Image Surface	85
5.5	Lead Field	86
5.6	Lead System Design—Differential Lead Positioning	91

5.7	ECG Leads Synthesis from Three Measured Leads—General Considerations	92
5.7.1	Correctness of the Dipole Volume Source Model.	94
5.8	Overview of Methods for the Synthesis of the 12-Lead ECG . . .	94
5.9	Synthesis Evaluation	95
5.10	Synthesis Personalization	95
	References.	98
6	Commercial ECG Systems	101
6.1	Advances in ECG Monitoring Supported by ICT	101
6.1.1	ECG Services in Sports and Entertainment.	101
6.1.2	Medical ECG Devices	102
6.2	Differential ECG Wireless Body Sensors	105
6.2.1	Savvy Sensor	107
6.2.2	Comparison of the Savvy Sensor with Related ECG Sensors.	108
	References.	113
7	Final Remarks and Conclusions.	115
7.1	Book Recapitulation.	115
7.2	Challenges in Long-Term ECG Analytics	116
7.3	mHealth Perspectives	118
	Index	121

Body Sensors and Electrocardiography

Trobec, R.; Tomasic, I.; Rashkovska Koceva, A.; Depolli, M.; Avbelj, V.

2018, XIV, 122 p. 48 illus., Softcover

ISBN: 978-3-319-59338-8
