

Contents

1	Fundamental Equations of Fluid and Geophysical	
	Fluid Dynamics	1
1.1	Introduction	1
1.2	The Continuum Hypothesis	2
1.3	Derivation of the Equations of Motion	3
1.3.1	Conservation of Mass	3
1.3.2	Incompressibility and Density Conservation	4
1.3.3	Momentum Equation in an Inertial Frame of Reference	5
1.4	Elementary Symmetries of the Euler’s Equation	6
1.4.1	Continuous Symmetries	7
1.4.2	Discrete Symmetries	12
1.4.3	Role of Gravity in Breaking the Symmetries of the Euler’s Equation	14
1.5	Momentum Equation in a Uniformly Rotating Frame of Reference	14
1.5.1	Vorticity Equation	16
1.5.2	Planar Flows with Constant Density	17
1.6	Elementary Symmetries of the Vorticity Equation	19
1.6.1	Continuous Symmetries	20
1.6.2	Discrete Symmetries	24
1.6.3	Breaking of Symmetries of the Vorticity Equation in the β Plane	26
1.7	Energy and Enstrophy Conservation	27
1.8	Conservation Laws	29
1.8.1	Kelvin’s Circulation Theorem and Conservation of Circulation	29
1.8.2	Potential Vorticity and Ertel’s Theorem	30

1.9	Conservation of Potential Vorticity and Models of Geophysical Flows	32
1.9.1	Shallow-Water Model with Primitive Equations	32
1.9.2	Quasi-geostrophic Shallow-Water Model	35
1.9.3	Energy and Enstrophy Conservation for the Quasi- geostrophic Shallow Water Model	37
1.9.4	Quasi-geostrophic Model of a Density Conserving Ocean	40
1.9.5	Quasi-geostrophic Model of a Potential Temperature-Conserving Atmosphere	47
1.9.6	Conservation of Pseudo-Enstrophy in a Baroclinic Quasi-geostrophic Model	50
1.9.7	Surface Quasi-geostrophic Dynamics	53
1.10	Bibliographical Note	54
	References	54
2	Mechanics, Symmetries and Noether's Theorem	57
2.1	Introduction	57
2.2	Hamilton's Principle of Least Action	58
2.3	Lagrangian Function, Euler–Lagrange Equations and D'Alembert's Principle	61
2.4	Covariance of the Lagrangian with Respect to Generalized Coordinates	64
2.5	Role of Constraints	66
2.6	Canonical Variables and Hamiltonian Function	67
2.7	Hamilton's Equations	68
2.8	Canonical Transformations and Generating Functions	73
2.8.1	Phase Space Volume as Canonical Invariant: Liouville's Theorem and Poisson Brackets	76
2.8.2	Casimir Invariants and Invertible Systems	80
2.9	Noether's Theorem for Point Particles	81
2.9.1	Mathematical Preliminary	81
2.9.2	Symmetry Transformations and Proof of the Theorem	82
2.9.3	Some Examples	85
2.10	Lagrangian Formulation for Fields: Lagrangian Depending on a Scalar Function	91
2.10.1	Hamiltonian for Scalar Fields	94
2.11	Noether's Theorem for Fields with the Lagrangian Depending on a Scalar Function	95
2.11.1	Mathematical Preliminary	95
2.11.2	Linking Back to the Physics	96

2.12	Lagrangian Formulation for Fields: Lagrangian Density Dependent on Vector Functions	98
2.12.1	Hamilton's Equations for Vector Fields	102
2.12.2	Canonical Transformations and Generating Functionals for Vector Fields	102
2.13	Noether's Theorem for Fields: Lagrangian Density Dependent on Vector Functions	104
2.14	Bibliographical Note	105
	References	106
3	Variational Principles in Fluid Dynamics, Symmetries and Conservation Laws	107
3.1	Introduction: Lagrangian Coordinates and Labels	107
3.2	Lagrangian Density in Labelling Space	110
3.2.1	Hamilton's Equations	112
3.3	Hamilton's Principle for Fluids	114
3.4	Hamilton's Principle in the Eulerian Framework	116
3.4.1	Equivalence of the Lagrangian and Eulerian Forms of Hamilton's Principle	122
3.5	Symmetries and Conservation Laws	123
3.5.1	Preliminaries and Notation	124
3.5.2	Time Translations Symmetry	125
3.5.3	Particle Relabelling Symmetry	126
3.6	Bibliographical Note	131
	References	132
4	Variational Principles in Geophysical Fluid Dynamics and Approximated Equations	135
4.1	Introduction	135
4.2	Hamilton's Principle, Rotation and Incompressibility	138
4.2.1	Lagrangian Density in a Rotating Frame of Reference	138
4.2.2	Relabelling Symmetry in a Rotating Framework	140
4.2.3	Role of Incompressibility	141
4.3	A Finite Dimensional Example: Dynamics of Point Vortices	142
4.4	Approximated Equations	147
4.4.1	Rotating Shallow Water Equations	147
4.4.2	Two-Layer Shallow Water Equations	152
4.4.3	Rotating Green-Naghdi Equations	156
4.4.4	Shallow Water Semi-geostrophic Dynamics	158
4.4.5	Continuously Stratified Fluid	164

4.5	Selected Topics in Wave Dynamics	166
4.5.1	Potential Flows and Surface Water Waves	166
4.5.2	Luke's Variational Principle	168
4.5.3	Whitham's Averaged Variational Principle and Conservation of Wave Activity	170
4.5.4	Example 1: The Linear Klein–Gordon Equation	173
4.5.5	Example 2: The Nonlinear Klein–Gordon Equation	174
4.5.6	Example 3: The Korteweg–DeVries (KdV) Equation	175
4.6	Bibliographical Note and Suggestions for Further Reading	178
	References	179
