

Contents

- 1 Basics of Hypergraph Theory 1**
 - 1.1 Basic Hypergraph Concepts 1
 - 1.1.1 Preliminary Definitions 1
 - 1.1.2 Incidence and Duality 3
 - 1.1.3 Basic Hypergraph Operations 5
 - 1.1.4 Subhypergraphs 8
 - 1.2 Hypergraph Coloring 11
 - 1.2.1 Basic Kinds of Hypergraph Coloring 11
 - 1.2.2 Greedy Algorithm for Hypergraph Coloring 13
 - 1.3 Hypergraph Clustering 14
 - 1.3.1 Hypergraph Clustering Problem 15
 - 1.3.2 Clustering Algorithm 16
 - References 19
- 2 Radio Resource Allocation for Device-to-Device Underlay Communications 21**
 - 2.1 Introduction 21
 - 2.2 System Model and Problem Formulation 22
 - 2.2.1 System Model 22
 - 2.2.2 Problem Formulation 24
 - 2.3 Traditional Graph Based Channel Allocation..... 25
 - 2.3.1 Graph Construction 25
 - 2.3.2 Channel Allocation Algorithm 26
 - 2.4 Hypergraph Based Channel Allocation 26
 - 2.4.1 Hypergraph Construction..... 27
 - 2.4.2 Hypergraph Coloring Algorithm 29
 - 2.5 Property Analysis 31
 - 2.6 Simulation Results 33
 - 2.7 Summary 37
 - References 38

3	Resource Allocation for Cross-Cell Device-to-Device Communications	41
3.1	Introduction	41
3.2	System Model and Problem Formulation	42
3.2.1	System Model	42
3.2.2	Cross-Cell D2D Communications	44
3.2.3	Problem Formulation	45
3.3	Hypergraph Based Algorithm	47
3.3.1	Hypergraph Construction	47
3.3.2	Hypergraph Clustering	49
3.3.3	Convergence	51
3.3.4	Alternating Optimization	52
3.4	Simulation Results	53
3.5	Summary	55
	References	55
4	Conclusions and Future Works	57
4.1	Conclusions	57
4.2	Other Applications	58
4.2.1	Socially-Aware Content Delivery Networks	58
4.2.2	Codebook Assignment Using SCMA	59
4.2.3	Heterogeneous Cloud Radio Access Networks	60
4.2.4	Smartphone Sensing	61
	References	61

Hypergraph Theory in Wireless Communication
Networks
