1	Introduction	1
1.1	The Discipline	1
1.2	History	2
1.3	Why Soil Mechanics?	4
1.3.1	Stiffness Dependent upon Stress Level	4
1.3.2	Shear	4
1.3.3	Dilatancy	5
1.3.4	Creep	6
1.3.5	Groundwater	7
1.3.6	Unknown Initial Stresses	8
1.3.7	Variability	9
2	Classification	13
2.1	Grain Size	13
2.2	Grain Size Diagram	14
2.3	Chemical Composition	16
2.4	Consistency Limits	17
2.5	An International Classification System	20
3	Particles, Water, Air	21
3.1	Porosity	21
3.2	Degree of Saturation	23
3.3	Density	23
3.4	Volumetric Weight	24
3.5	Water Content	25
4	Stresses in Soils	29
4.1	Stresses	29
4.2	Pore Pressures	30
4.3	Effective Stress	31
4.4	Archimedes and Terzaghi	34

5	Stresses in a Layer	39
5.1	Vertical Stresses	39
5.2	The General Procedure	44
6	Darcy's Law	49
6.1	Hydrostatics	49
6.2	Groundwater Flow	51
7	Permeability	59
7.1	Permeability Test	59
7.2	Falling Head Test	61
8	Groundwater Flow	67
8.1	Flow in a Vertical Plane	67
8.2	Upward Flow	69
8.3	Flow Under a Wall	73
9	Flotation	77
9.1	Archimedes	77
9.2	A Concrete Floor Under Water	78
9.3	Flotation of a Pipe	80
10	Flow Net	85
10.1	Potential and Stream Function	85
10.2	Flow Under a Structure	88
11	Flow Towards Wells	93
11.1	Flow in a Confined Aquifer	93
11.2	A Single Well	94
11.3	Systems of Wells	95
12	Stress Strain Relations	97
12.1	Compression and Distortion	97
12.2	Unloading and Reloading	102
12.3	Dilatancy	103
13	Tangent Modulus	109
13.1	Deformations	109
13.2	Linear Elastic Material	111
13.3	A Non-linear Material	113
14	One-Dimensional Compression	115
14.1	Confined Compression Test	115
14.2	Elastic Analysis	120
15	Consolidation	123
15.1	Differential Equation	123
15.2	Boundary Conditions and Initial Condition	127

16 Analytical Solution	131
16.1 The Problem	131
16.2 Solution	132
16.3 The Deformation	135
16.4 Approximation for Small Values of Time	139
17 Numerical Solution	141
17.1 Finite Differences	141
17.2 Numerical Stability	145
17.3 Numerical Versus Analytical Solution	145
18 Consolidation Coefficient	149
18.1 Theory Versus Test Results	149
18.2 Log(T)-Method	150
18.3 \sqrt{t} -Method	151
18.4 Determination of m_v and k	152
19 Creep	157
19.1 Keverling Buisman	157
20 Shear Strength	163
20.1 Coulomb	163
20.2 Mohr's Circle	164
20.3 Mohr–Coulomb	168
20.4 The Mohr–Coulomb Criterion	169
20.5 Remarks	170
21 Triaxial Test	173
21.1 The Triaxial Test	173
22 Shear Test	181
22.1 Direct Shear Test	181
22.2 Simple Shear Test	184
23 Pore Pressures	187
23.1 Measuring the Pore Pressure	187
23.2 Types of Triaxial Tests	190
23.3 Elastic Response	190
23.4 Dilatancy	192
23.5 Skempton's Coefficients	193
24 Undrained Behaviour of Soils	197
24.1 Undrained Tests	197
24.2 Undrained Shear Strength	201

25	Stress Paths	205
25.1	Parameters	205
25.2	Triaxial Test	207
26	Elastic Stresses and Deformations	213
26.1	Stresses and Deformations	213
26.2	Elasticity	214
27	Boussinesq	219
27.1	Boussinesq's Problem	219
28	Newmark	225
28.1	Newmark's Problem	225
29	Flamant	231
29.1	Flamant's Problem	231
30	Layered Soil	237
30.1	Example	238
31	Lateral Stresses	241
31.1	Coefficient of Lateral Earth Pressure	241
31.2	Fluid	244
31.3	Elastic Material	244
31.4	Elastic Material Under Water	246
32	Rankine	249
32.1	Mohr–Coulomb	249
32.2	Active Earth Pressure	252
32.3	Passive Earth Pressure	253
32.4	Neutral Earth Pressure	255
32.5	Groundwater	257
33	Coulomb	261
33.1	Active Earth Pressure	261
33.2	Passive Earth Pressure	264
34	Tables for Lateral Earth Pressure	269
34.1	Retaining Wall	269
34.2	Example	272
34.3	Tables	274
35	Sheet Pile Walls	277
35.1	Homogeneous Dry Soil	277
35.2	Pore Pressures	282
36	Blum	287
36.1	Blum's Schematization	287
36.2	Blum's Method	288

37	Sheet Pile Wall in Layered Soil	295
37.1	Layered Soil	295
37.2	Computer Program	296
37.3	Computation of Anchor Plate	298
38	Limit Analysis	301
38.1	Plasticity	301
38.2	Basic Theorems of Plasticity Theory	302
39	Strip Footing	305
39.1	Strip Load	305
39.2	Lower Bound	305
39.3	Upper Bound	309
40	Prandtl	311
40.1	Prandtl's Solution	311
40.2	Equilibrium Equations in Polar Coordinates	311
40.3	Prandtl's Schematization	313
41	Limit Theorems for Frictional Materials	317
41.1	Shear Test	317
42	Bearing Capacity	321
42.1	Bearing Capacity of Strip Foundation	321
42.2	Inclination Factors	324
42.3	Shape Factors	325
43	Vertical Slope in Cohesive Soil	329
43.1	Lower Bound	329
43.2	Upper Bound	331
44	Stability of Infinite Slope	335
44.1	Infinite Slope in Dry Sand	335
44.2	Infinite Slope Under Water	337
44.3	Flow Parallel to the Slope	338
44.4	Horizontal Outflow	340
45	Slope Stability	343
45.1	Circular Slip Surface	343
45.2	Fellenius	344
45.3	Bishop	346
46	Soil Exploration	349
46.1	Cone Penetration Test	349
46.2	Vane Test	353
46.3	Standard Penetration Test	353
46.4	Soil Sampling	354

47	Model Tests	359
47.1	Types of Models.	359
47.2	Simple Scale Models	360
47.3	Centrifuge Testing	362
48	Pile Foundations	367
48.1	Bearing Capacity of a Pile	367
48.2	Statically Determinate Pile Foundation	369
48.3	Statically Indeterminate Pile Foundation	370
	Appendix A: Stress Analysis	375
	Appendix B: Elasticity	381
	Appendix C: Plasticity	393
	Answers to Problems	409
	Bibliography	413
	Subject Index.	415
	Author Index.	419

An Introduction to Soil Mechanics

Verruijt, A.

2018, XIII, 420 p. 235 illus., 228 illus. in color. With
online files/update., Hardcover

ISBN: 978-3-319-61184-6
