<b>1</b>	<b>Metaheuristic Approaches for the Minimum Cost Hybrid Berth Allocation Problem</b>	<b>1</b>
	Nataša Kovač, Zorica Stanimirović and Tatjana Davidović	
1.1	Introduction	2
1.2	Minimum Cost Hybrid Berth Allocation Problem.	5
1.2.1	Problem Description	6
1.2.2	Basic Definitions and Notations	8
1.3	Evolutionary Algorithm for MCHBAP	9
1.3.1	Representation of Individuals	9
1.3.2	Generating Initial Population for EA	11
1.3.3	EA Operators	12
1.4	Bee Colony Optimization Algorithm for MCHBAP	18
1.4.1	Implementation Details	18
1.4.2	Improvement Techniques of BCO	20
1.5	Variable Neighborhood Search Based Metaheuristic for MCHBAP	26
1.5.1	Variable Neighborhood Descent for MCHBAP	26
1.5.2	General Variable Neighborhood Search for MCHBAP	33
1.6	Experimental Results	39
1.7	Conclusion	44
	References	45
<b>2</b>	<b>Ship Stability Considerations in the Quay Crane Scheduling Problem</b>	<b>49</b>
	Noura Al-Dhaheri	
2.1	Research in Maritime Logistics	49
2.2	Ship Stability Consideration	51
2.3	Outlook and Future Work	56
	References	57

<b>3</b>	<b>Recent Progress Using Matheuristics for Strategic Maritime Inventory Routing</b>	<b>59</b>
	Dimitri J. Papageorgiou, Myun-Seok Cheon, Stuart Harwood, Francisco Trespalacios and George L. Nemhauser	
3.1	Introduction	59
3.1.1	Literature Review	61
3.1.2	Contributions of this Chapter	64
3.2	Problem Description and Formulations	64
3.2.1	A Discrete-Time Arc-Flow Mixed-Integer Linear Programming Model	66
3.2.2	Additional Valid Inequalities: Mixed Integer Rounding Cuts	67
3.3	Matheuristics Explored	68
3.3.1	Construction Heuristics	68
3.3.2	Improvement Heuristics	72
3.3.3	Hybrid Approaches	74
3.4	Computational Experiments	75
3.4.1	Benchmarking Experiments with Commercial Solvers	80
3.4.2	Experiments with Construction Heuristics	82
3.4.3	Experiments with Improvement Heuristics	84
3.4.4	Experiments with Hybrid Heuristics for Hard Instances Only	87
3.4.5	Recommendations for Obtaining Good Solutions Quickly	87
3.5	Conclusions and Future Research Directions	89
3.6	Nomenclature	89
3.7	Appendix	90
	References	92
<b>4</b>	<b>Evolutionary Computation for the Ship Routing Problem</b>	<b>95</b>
	Aphrodite Veneti, Charalampos Konstantopoulos and Grammati Pantziou	
4.1	Introduction	95
4.2	Problem Definition	97
4.3	Related Work	99
4.4	Customization of Evolutionary Algorithms	102
4.5	Modelization Issues	107
4.6	Computational Results	108
4.7	Conclusion	113
	References	113

<b>5</b>	<b>Decision Support Tool Employing Bayesian Risk Framework for Environmentally Safe Shipping</b>	<b>117</b>
	Sotirios Gyftakis, Ioanna Koromila, Theodore Giannakopoulos, Zoe Nivolianitou, Eleni Charou and Stavros Perantonis	
5.1	Introduction	118
5.2	Vessel Risk Estimation	120
5.2.1	Probability Estimation	121
5.2.2	Consequences Estimation	125
5.3	Historical Trajectories Preprocessing and Clustering	126
5.4	Decision Support Tool	127
5.4.1	Description of Tool Functionalities	127
5.4.2	Technologies Used	130
5.4.3	Data Analytics	130
5.5	Decision Support Tool Applications	134
5.5.1	Queries in Environmentally Sensitive Areas	134
5.5.2	Marine Traffic Monitoring for Environmental Safety	134
5.5.3	Influence of Restricted Areas in Marine Traffic	137
5.6	Conclusions—Future Plans	141
	References	142
<b>6</b>	<b>A Decision Support System for the Assessment of Seaports' Security Under Fuzzy Environment</b>	<b>145</b>
	Andrew John, Zaili Yang, Ramin Riahi and Jin Wang	
6.1	Introduction	146
6.2	Literature Review	147
6.2.1	Analysis of Maritime Security Systems/Measures	148
6.3	Methodology	150
6.3.1	Identify Seaports' Security Systems/Measures	150
6.3.2	Develop a Generic Security Risk Model	152
6.3.3	Determine the Weight of Each Security System/Measure	153
6.3.4	Adopt Fuzzy Logic and a Belief Degree Concept to Calibrate the Performance of Security Systems	156
6.3.5	Application of Evidential Reasoning Algorithm (ER) for Security Risk Synthesis	163
6.3.6	Perform Sensitivity Analysis	165
6.4	Test Case	165
6.4.1	Identify Seaports' Security Systems/Measures	166
6.4.2	Develop a Generic Security Systems/Measures' Risk Model	166
6.4.3	Weight Estimation of Security Risks' Attributes	166
6.4.4	Assessment of the Seaports' Security Systems/Measures Using a Belief Degree Concept	169
6.4.5	Synthesis of Results Using the ER	170

6.4.6	Perform Sensitivity Analysis . . . . .	172
6.4.7	General Discussions . . . . .	174
6.5	Conclusion . . . . .	174
