

# Contents

|          |  |           |
|----------|--|-----------|
| <b>1</b> | <b>Kinetic Theory and the Maxwell Distribution</b>       | <b>1</b>  |
| 1.1      | The Statistical Nature of the Ideal Gas                  | 2         |
| 1.2      | Collisions   | 7         |
| 1.3      | Dynamical Aspects  | 9         |
| 1.4      | Suggestions for Supplementary Reading                    | 12        |
|          | References   | 12        |
| <b>2</b> | <b>Elementary Statistical Physics</b>                    | <b>13</b> |
| 2.1      | Basic Postulates   | 13        |
| 2.2      | Statistical Ensembles                                    | 14        |
| 2.2.1    | The Microcanonical Ensemble                              | 14        |
| 2.2.2    | The Canonical Ensemble                                   | 23        |
| 2.2.3    | The Grand–Canonical Ensemble<br>and the Gibbs Ensemble   | 38        |
| 2.3      | Suggestions for Supplementary Reading                    | 44        |
|          | References   | 45        |
| <b>3</b> | <b>Quantum Statistics – The Fermi–Dirac Distribution</b> | <b>47</b> |
| 3.1      | Combinatorial Derivation of the FD Statistics            | 48        |
| 3.2      | FD Statistics from the Grand–Canonical Ensemble          | 50        |
| 3.3      | The Fermi Energy   | 52        |
| 3.4      | Useful Approximations of Fermi Integrals                 | 54        |
| 3.5      | Applications of the FD Distribution                      | 56        |
| 3.5.1    | Electrons in a Solid                                     | 57        |
| 3.5.2    | Thermionic Emission*                                     | 58        |
| 3.5.3    | Photoelectric Emission*                                  | 61        |
| 3.6      | Suggestions for Supplementary Reading                    | 62        |
|          | References   | 63        |

|          |  |     |
|----------|--|-----|
| <b>4</b> | <b>Quantum Statistics – The Bose–Einstein Distribution</b> | 65  |
| 4.1      | Combinatorial Derivation of the BE Statistics              | 65  |
| 4.2      | Derivation Using the Grand–Canonical Ensemble              | 66  |
| 4.3      | Bose–Einstein Condensation                                 | 67  |
| 4.4      | Black–Body Radiation                                       | 70  |
| 4.5      | Suggestions for Supplementary Reading                      | 73  |
|          | References   | 73  |
| <b>5</b> | <b>Interacting Particle Systems and Phase Transitions</b>  | 75  |
| 5.1      | Introduction – Sources of Interaction                      | 75  |
| 5.2      | Models of Interacting Particles                            | 76  |
| 5.3      | A Qualitative Discussion on Phase Transitions              | 81  |
| 5.4      | The One–Dimensional Ising Model                            | 84  |
| 5.5      | The Curie–Weiss Model                                      | 86  |
| 5.6      | Spin Glasses*  | 91  |
| 5.7      | Suggestions for Supplementary Reading                      | 93  |
|          | References   | 93  |
| <b>6</b> | <b>Vibrations in a Solid – Phonons and Heat Capacity*</b>  | 95  |
| 6.1      | Introduction   | 95  |
| 6.2      | Formulation  | 96  |
| 6.3      | Heat Capacity Analysis                                     | 97  |
| 6.3.1    | Einstein’s Theory  | 99  |
| 6.3.2    | Debye’s Theory   | 100 |
| 6.4      | Suggestions for Supplementary Reading                      | 101 |
|          | References   | 102 |
| <b>7</b> | <b>Fluctuations, Stochastic Dynamics and Noise</b>         | 103 |
| 7.1      | Elements of Fluctuation Theory                             | 104 |
| 7.2      | Brownian Motion and the Langevin Equation                  | 106 |
| 7.3      | Diffusion and the Fokker–Planck Equation                   | 110 |
| 7.4      | The Fluctuation–Dissipation Theorem                        | 115 |
| 7.5      | Johnson–Nyquist Noise in the Quantum–Mechanical Regime     | 122 |
| 7.6      | Other Noise Sources  | 125 |
| 7.7      | Suggestions for Supplementary Reading                      | 129 |
|          | References   | 129 |
| <b>8</b> | <b>A Brief Touch on Information Theory*</b>                | 131 |
| 8.1      | Introduction – What Is Information Theory About?           | 131 |
| 8.2      | Entropy in Information Theory and Statistical Physics      | 132 |
| 8.3      | Statistical Physics of Optimum Message Distributions       | 135 |
| 8.4      | Suggestions for Supplementary Reading                      | 137 |
|          | References   | 137 |

Statistical Physics for Electrical Engineering

Merhav, N.

2018, XII, 137 p. 21 illus., 3 illus. in color., Hardcover

ISBN: 978-3-319-62062-6
